REPORT.

Highland and Agricultural Society,
Edinburgh, 12th December 1856.

Sir,

I have the honour of presenting to the Lords Commissioners of Privy Council for Trade the concluding Report on the Statistics of Scotch Agriculture for 1856, embracing,—

No. 1. Amended Table of acreage under tillage.

No. 2. Proportional acreage of the crops in each county.

No. 3. Estimate of gross produce, in bushels or tons, of the principal cereal or root crops in each country.

No. 4. Estimate of the average acreable produce of the same crops in each county.

No. 5. Estimate of average acreable produce in each district, or subdivision of a county.

No. 6. Estimate of the weight of the cereal crops in each district.

No. 7. List of districts; and Reports by Enumerators on the quality of the crops.

I shall endeavour, as briefly as possible, to offer a few observations in explanation of these Tables.

I.—Amended Table of Acreage.

On the 1st of September I had the honour of reporting to my Lords the acreage of the different crops and the amount of stock in each county, as tabulated from the returns made by occupants of land rented at and above 10*l.* in twenty-six counties, and at and above 20*l.* in eight counties. The arable acreage and stock belonging to the occupants of smaller tenements, as ascertained by a survey of their holdings in 1854, was also given.

It is unnecessary to reproduce the returns of stock* published in September, but I have considered it proper to repeat the table for acreage, not only on account of some alterations to which it has been subjected, but because, without it, the calculations in Table No. 3. might appear to be incorrect. The estimates of produce in that table are obtained by multiplying the acreage of a crop with its average acreable produce in bushels or tons; consequently, the results contained in Table No. 3., if tested by applying the figures in Table No. 4. as the multipliers of those in No. 1., would seem to be erroneous wherever the latter have been altered since their first publication.

As an "amended table" is now submitted for the first time, it might be supposed, either that the acreage returns have not this year been made with the same accuracy as on former occasions, or that formerly they were not sifted with the same care as now. The explanation, however, is simple. In 1855, and previously, the returns of acreage were printed, along with the estimates of produce, in December or January; there was, therefore, ample opportunity between the period of their reception and that of their publication to investigate all questions with reference to their accuracy. But the returns having this year been tabulated and printed as soon as obtained, I was under the necessity of assuming their accuracy, and of deferring inquiry. This may not be without its advantages, as a comparison between the original and the amended table affords the means of ascertaining the extent, and determining the character of the errors attaching to the first, and establishes, it is conceived, two points of importance: (1.) The immaterial character of the alterations, and the causes to which they are attributable, in no way effect the intregrity of the returns, nor raise a reasonable doubt as to the good faith in which they have been made, but tend rather to confirm their general

* See Appendix for these Returns.

accuracy and trustworthiness. (2.) The alterations go far to meet the objections which have been urged as to the want of all test of accuracy in the machinery which is employed, and to prove that there are means and appliances for detecting and correcting error.

An examination of the amended return will show a decrease on the gross area in tillage of 530¾ acres, but a much greater difference in details. As compared with the table published in September, there is now an excess—in wheat, of 1,485¾ acres; in barley, of 75½; and in oats, of 386. These alterations are chiefly attributable to two clerical errors, by which a considerable acreage was overlooked in summation, and, though they could not escape the investigation to which the calculations are subjected, it was impossible to correct them in time, owing, as has been observed, to the early publication of the tables this year. 133½ acres of rye-grass have been transferred from the column for rye to that for grass; vetches are less by 865 acres, misplaced, and properly belonging to the column for green-crops; while turnips are in excess 389¾ acres, and potatoes 420¾, principally through the erroneous entry of vetches, and the omission of acreage already mentioned. In addition to these causes, alterations have also been operated by returns having been amended, since September, by the parties who made them, or by Enumerators. The principal difference, however, is observed in column 18, and consists in the deletion of bare fallow, or its transference to grass under rotation. It was from the first apparent that, in some districts, the bare fallow returns were in excess, and the result of investigation has been to reduce the extent from 17,715 to 15,464½ acres, or nearly 13 per cent. This is accounted for, partly by a misapprehension of the meaning of the term, among some of the smaller farmers, in districts where bare fallow is unknown, who scheduled, as such, acreage which should have been returned as grass under rotation; a considerable breadth of land, recently trenched and reclaimed from waste, but not yet cropped, was further scheduled as fallow; this, strictly, cannot yet be regarded as having come under a rotation of tillage, and should, therefore, have been omitted; at all events, as ground under reclamation, it indicates a much more progressive state of agricultural improvement, than a return of bare fallow would serve to convey. Notwithstanding the acreage which has been transferred from bare fallow to grass, the latter only shows an increase of 191¼; this, however, would have been considerably greater but for the acreage removed from the grass column, which investigation showed was not under a rotation of tillage, but pertained to permanent pasture, not now embraced by the inquiry.

The difference between the original and amended table may be summed up as follows:—

Decrease on Vetches	- - - -		865 acres.
„ Bare Fallow	- - -		2,250½ „
			3,115½
Increase on White Crops	-	1,730	
„ Green	- - -	663½	
„ Grass	- - -	191¼	
			2,584¾ „
	Decrease, as above -		530¾ „

It has already been stated that returns of acreage, published on the 1st of September, cannot previously be passed through any ordeal of inquiry; the Report, therefore, must always then be accepted as of an interim character, subject to alterations rendered necessary by, and now submitted in consequence of, subsequent investigation.

Passing from discrepancies between the original and the amended tables of acreage, I may be permitted to offer a few remarks on the differences observable in the distribution of the crops of 1856 and 1855. A comparison between the two years exhibits uniformity as regards the gross results, with very considerable variations in detail, but precisely such as might have been looked for, and should be found.

In 1856 the area under tillage was - -	3,545,191	acres.
In 1855 - - - - -	3,530,068½	„
Showing an excess in 1856 of - -	15,122½	„

Which is perfectly in accordance with the agricultural improvements known to be in operation, and with the inducements which high prices have held out to break up old pasture. As regards details, the most prominent difference between the two years is the increased area under wheat. Indeed, the rapid extension of that crop during the three years the statistical inquiry has been in operation is remarkable, and, but for its operation, would comparatively have been unknown. In 1854 there were 168,216 acres of wheat; in 1855, 191,300¾; and in 1856, 263,328 acres,—an increase upon last year of 72,027¼ acres, and of 56½ per cent. on the returns for 1854. The information afforded by the acreage table for the currrent year enables us to account for this great excess, not only consistently with the circumstances of the times, but satisfactorily as regards the progress of agriculture. The remunerative prices which have been obtained for wheat make it natural that it should be substituted, where practicable, for barley and oats, and lead us to look for the conversion of grass land into grain. We may, therefore, seek to find the increase in wheat met by a corresponding decrease in the acreage of the other white crops, and of grass under rotation; as it would argue ill for the state of agriculture did any proportion appear to be a subtraction from the area under green crops. We learn, accordingly, from Table No. 1. that in 1856 the extent

under barley had decreased - - - -	20,343½	acres.
Oats - - - - - -	15,018	„
Grass under rotation - - - -	34,268½	„
	69,630	„

Thus, together, nearly accounting for the increase in wheat. I would guard myself, however, against its being inferred from this statement that wheat has directly replaced so large an extent of grass. To a certain extent, and in some districts, it has succeeded grass; but, in general, its substitution for barley and oats will account for the excess: indeed, the acreage of the latter crop would probably have shown a much greater decrease than is indicated, had it not been compensated by the grass land, which, according to the ordinary rules of husbandry in this country, was principally broken into oats.

The fact that the green crops, including beans and pease, exhibit an increase of 17,479¾ acres upon the breadth of 1855 is of importance, as showing that the farmers of the country are not attempting to increase the production of wheat without, in some measure, properly and legitimately preparing for its extension.

Before closing this cursory view of the comparative distribution of crops in 1855 and 1856, I must advert to the great difference between the returns of bare fallow for the two years. In 1855 there were 22,462 acres; in 1856 there were 15,464½, showing a decrease of 6,997½ acres. It must not, however, be concluded that there is, by this extent, less land under preparation for wheat by means of fallow, as the greater proportion of the excess of 1855 was erroneously returned under the misapprehensions which have already been referred to, and which, to a minor degree, have this year been again in operation.

II.—Proportional Acreage.

This table is presented for the first time, and, though not called for by my Lords, will, it is hoped, be regarded as an appropriate addition to that part of the Report bearing on the extent of land in tillage, and the distribution of the crops. It is stated at the per-centage which each crop, in a county, bears to the whole land under tillage, and its object is to indicate, without the necessity of making minute calculations, the relative proportions of the different crops. It will be observed that the table is divided into three sections, consisting of,—1st, the grain and other crops of an exhausting character; 2d, the green crops and fallow, which are generally applied as restoratives; 3d, the grass. The total per-centage of each of these sections is given in separate columns, and, by

comparing them, a tolerable knowledge is obtained of the average rotation observed in each county. Thus, Ayrshire, a dairy district, has two parts in grain crops, one in green crops, and four in grass, indicating a rotation of seven years. Aberdeenshire has two parts in grain, one in green crop, and two in grass, giving a rotation of five years. Berwickshire shows rather more green crop and less grass than is proper to a five years' rotation, which is consistent with the existence occasionally in that county of a six years' shift, containing two green crops. It is unnecessary to multiply illustrations; the table is not offered as determining rotations either in these counties or elsewhere, varying, as cropping does, not only in different districts of the same county, but on different portions of the same farm,—still, the results may be interesting as indicative of an average.

III.—Estimates of Gross Produce per County.

It has been observed in England, "that we are living in an age of statistical imposture, and that many returns in reference to agriculture are made by men who are not acquainted with rural life." Whatever truth there may be in this statement elsewhere, it has, assuredly, no application to Scotland, as the estimated returns, now submitted, emanate from men selected on account, not only of their intimate "acquaintance with rural life," but of their integrity, skill, and experience, and their special knowledge of the agriculture of the localities within which they act. For the purposes of the statistical inquiry, Scotland is divided into 119 districts, containing a greater or lesser number of parishes, according to the geographical divisions and agricultural features of the country. Every district is under the supervision of an Enumerator, and he, himself a farmer, is aided by a Committee, composed of influential members of the same class, taken from each of the combined parishes, and whose duty it is to obtain the most reliable information regarding the results of the harvest in their own immediate neighbourhood. These committees are convened by their respective Enumerators between the 15th and 30th of November, when, on the data submitted to the meeting by each member, the average acreable produce of each crop grown within the district is estimated and reported to me, which enables me to strike similar averages for counties, and, by applying them to the acreage, to bring out the estimates of gross produce now under consideration. We have thus the services and assistance of more than a thousand practical farmers, specially selected, from local and professional fitness, for the duty devolved on them, and openly assuming the responsibility of its faithful discharge.

In again presenting the results of their labours, I am entitled to claim for the estimates that respect and confidence which are due to the honesty of purpose and careful consideration bestowed upon them by the different Enumerators and Committees. Their duty—at all times one of difficulty—has this year been encompassed by unusual obstacles, and, but for my cognizance of the anxiety and exertions with which these have been met, I should feel hesitation in laying the estimates before my Lords; as it is, they must be accepted with more than usual caution, and read with a greater than ordinary allowance.

In many districts of Scotland, especially along the east coast, and in some of the midland counties, the past harvest has been of a most exceptional and anomalous character. The grain crops, though late, generally promised well, and a portion had been secured in good condition, but the greater part was in stock, or uncut, when, towards the close of September, it was exposed to a violent storm of wind and rain from the east, lasting for several days, and succeeded by weeks of weather unsuitable for, and suspending, all harvest operations. The results were disastrous in various ways: grain on the field was shaken, sprouted, and discoloured; while much in the stackyard heated, owing to the unfavourable circumstances in which it was secured; in short, the difficulties encountered in securing the crops were greater than have been experienced since 1816. Fortunately, this state of matters did not extend over the whole country; the western counties comparatively escaped, and, at a time when the crofters on the outskirts of the Argyllshire coast had their little stackyards completed, the great farmers of Berwickshire, the Lothians, Fife, Forfar, and other highly cultivated districts, had the bulk of their crops unsecured. It must be obvious how greatly the difficulties, always attached

to an estimate of produce, have this year been enhanced: not only has much actually been lost, but the unusual proportion of light grain, the varieties in quality, and, above all, the still unascertained damage which may have been progressing in the stack, combine to invest the estimates for 1856 with such exceptional features, that I could not permit them to go forth unattended by the foregoing explanation. I have only to repeat, that those intrusted with the duty of preparing them have done their best to overcome, by increased care and caution, the unfavourable circumstances I have endeavoured to describe.

Tables IV. and V.

The foregoing observations equally apply to Table No. IV.—the estimate of average acreable produce per county, and to Table No. 5.—the estimate of average acreable produce per district. I have already explained that the latter emanates directly from the various Committees, and forms the foundation of Nos. 3. and 4., which are worked out in my office. The only special remark called for in regard to this table is, that the estimate of potatoes refers merely to the sound part of the crop; for information regarding the proportion diseased, reference is made to the special reports in No. 7.

VI.—Table of Weights.

Subsequently to the issue of the principal Report last year, certain information, with reference to the weight of the cereals, was published as a supplement, and, according to the instructions of my Lords, I have now endeavoured to obtain such information more systematically, and to tabulate the results. It must be evident that this is an unfortunate year for a first attempt of the kind, in consequence of the unusual proportion of light grain, and the great varieties of quality in many districts. In those counties where the harvest was so unfavourable the enumerators have estimated weight with considerable hesitation—in some instances indeed, as the corresponding blanks in the table will show, they have found it impossible to make a report, and in others (marked by an asterisk *), they only estimate the weight of that portion of the crop which was secured in good condition before the bad weather. Generally the figures indicate either the points between which weights are supposed to range, or what is conceived to be the average between these. I have no doubt now that the attention of the Committees has been formally turned to the weight of grain, that we shall in future, and with seasons less exceptional in their character than the past, succeed in obtaining the information sought for, in a shape more satisfactory than that now presented.

VII.—List of Districts, and Reports by Enumerators.

The Reports appended to the List of Districts are presented for the first time. I was induced to call for them in consequence of the peculiar character of the harvest, but they may not be considered necessary under circumstances less exceptional than those which it has been my duty to explain. With the view of obtaining as much information as possible regarding the effects of exposure and unfavourable weather, I addressed, in the month of October, the following Circular to each enumerator:—

"As in many districts the backward state of the weather has materially retarded the carrying of the crops, it has been suggested that Enumerators should report, as nearly as possible, the proportion of grain in their respective districts secured early, and how far the quality of what has been outstanding beyond the usual period is deteriorated. You will oblige me by calling the attention of your Committee to these points."

The abstracts now submitted contain the replies by the Enumerators, condensed and arranged as systematically as I could. Many of these communications were elaborate and valuable, but their insertion at length would be inconsistent with the limits of this Report; while, perhaps, the comparative results in different districts might not have been so easily arrived at, as under

the arrangement adopted. I need scarcely remark, that the additional information afforded by these Reports has entailed no small amount of extra labour on the Enumerators and their Committees, and affords a renewed proof of the zeal with which their duties are performed.

In conclusion, it is my pleasing duty to inform my Lords, that the returns continue to be freely and voluntarily made by the agricultural community. Instances there are, no doubt, of opponents, who plead the objections so frequently heard in England, but such cases are singular. The farmers of Scotland have practically satisfied themselves that the inquiry is in no respect inquisitorial, and that it cannot possibly divulge or compromise individual interests. They appreciate with intelligence the importance of statistical information, and they would rejoice could the inquiry be systematically extended over the three countries, believing that its results are comparatively valueless so long as its operation is partial.

I have the honour to be, &c.

(Signed) JN. HALL MAXWELL.

James Booth, Esq.
Principal Secretary of the Board of Trade.

LIST OF DISTRICTS AND ABSTRACTS FROM REPORTS BY ENUMERATORS.

1.—County of Aberdeen.

District No. 1.—(*Mar.*) Parishes of Aboyne, Alford, Birse, Cluny, Coul, Crathie, Drumoak, Dyce, Echt, Glenmuick, Kemnay, Kincardine O'Neil, Kinnellor, Leochel-Cushnie, Logie-Coldstone, Lumphanan, Mid-Mar, Moneymusk, Newhills, Peterculter, Skene, Strathdon, Tarland, Tough, and Towie. *Enumerator, Robert Williamson, Bendauch, Blackburn, Aberdeen.*

Abstract of Report.—About one-twentieth of the grain secured in good condition, and of fine quality and colour; the deterioration to the remainder by exposure estimated at 20 per cent., except in upper portion of district, where crops were later and suffered less. Much grain stacked in bad condition, and will, it is feared, suffer from heating, and yield inferior meal. Potatoes diseased one-third.

2.—(*Formartine.*) Belhelvie, Bourtie, Ellon, Fintray, Foveran, Keith-hall, Logie-Buchan, New Machar, Old Machar, Methlic, Meldrum, Slains, Tarves, and Udny. *Enumerator, Robert Copland, Haddo House, Aberdeen.*

Abstract of Report.—Except in parish of Old Machar, scarcely any of the crop secured before the rains, and deterioration in value from exposure is estimated at 20 per cent.

3.—(*Buchan.*) Aberdour, Crimond, Cruden, Old Deer, New Deer, Fraserburgh, King Edward, Longside, Lonmay, Monquhitter, Peterhead, Pitsligo, Rathen, Strichen, St. Fergus, and Tyrie. *Enumerator, John Ferguson, Coynach, Ellon.*

Abstract of Report.—Quality of cereals, except barley and bere, generally bad. Wheat ill matured from want of sun; little of the crop secured before rains; portion exposed, ill filled and discoloured, and supposed to be light, but not yet tested. Barley, three fourths secured in good order; remainder much sprouted and injured. Oats, small proportion secured well; one fifth lost from sprouting and exposure. Turnips an average crop. Potatoes one third diseased.

4.—(*Garioch.*) Auchterless, Chapel of Garioch, Culsalmond, Daviot, Fyvie, Insch, Inverury, Kintore, Leslie, Oyne, Premnay, Rayne, and Turriff. *Enumerator, George Philip, Boynds, Keith Hall.*

Abstract of Report.—Wheat and barley ill secured, and still in bad condition. Oats a great crop, but very much damaged; loss from sprouting, &c. estimated at 20 per cent., and quality and condition now bad, but may improve if stacks dry. Bere an excellent crop and well secured. Turnips a full average and of good quality. Potatoes an average crop, but much diseased—in some parishes by one half.

5.—(*Strathbogie.*) Auchindoir, Cairney, Clatt, Drumblade, Forgue, Gartly, Glass, Glenbucket, Huntly, Keig, Kildrummy, Kinnethmont, Rhynie, and Tullynessle. *Enumerator, William Murdoch, Huntly.*

Abstract of Report.—Cereals generally inferior. No wheat nor oats—and, except in parish of Tullynessle, little barley or bere—secured before the rains. Loss from exposure may be estimated at about 20 per cent. on the whole. Weights of grain vary so as to make an estimate difficult. Turnips good. Mangold an average. Potatoes unequal; about one-sixth unsound, except in Glenbucket, where fully three fourths of the crop were diseased.

2.—County of Argyll.

District No. 1.—(*Cowal.*) Dunoon and Kilmun, Inverchoalin, Kilfinnan, Kilmodan or Glendaruel, Lochgoilhead, and Strachur and Stralachlan. *Enumerator, Archibald M'Farlane, Clachan, Cairndow.*

Abstract of Report.—Grain secured early, and in fine condition. Quality of all crops good. One fourth of potatoes diseased.

2.—(*Argyll.*) Craignish, Glassary, Inverary, Kilmartin, North Knapdale, and South Knapdale. *Enumerator, Neil M'Kechnie, Inverary.*

Abstract of Report.—Grain secured early, and in excellent condition; quality good. Potatoes small crop, and much deseased, but cannot estimate proportion, the unsound having rotted before digging.

3.—(*Lorn.*) Lismore and Appin, Ardchattan and Muchairn, Glenorchy and Inishail, Kilchattan and Kilbrandon, Kilbride and Kilmore, Kilninver and Kilmelfort, Kilchrennan and Dalavich, and Argyllshire portion of Kilmallie. *Enumerator, Duncan M'Arthur, Penningfair, Oban.*

Abstract of Report.—Grain secured early, and in fine condition; quality good. Turnips and mangold small, but sound. Potatoes nearly an entire failure; cannot estimate proportion of diseased, having rotted before digging.

4.—(*Kintyre.*) Campbelltown, Gigha, Kilcalmonell and Kilberry, Killean and Kilkenzie, Southend, and Saddell and Skipness. *Enumerator, Peter Watson, Campbelltown.*

Abstract of Report.—Grain secured in first-rate order, and generally of good quality, especially oats and beans. Turnips good; mangold excellent. Potatoes much diseased, but proportion cannot be estimated.

5.—(*Islay.*) Bowmore or Killarrow, Kilchoman, Kildalton, and Kilmeny. *Enumerator, Archibald M'Donald, Ardnave, Bowmore.*

Abstract of Report.—Grain secured early, and in good condition. Oats and rye above an average crop; bere an average; turnips below average; potatoes a poor crop, and about one fourth diseased.

6.—(*Mull.*) Kilfinichen and Kilmachewan, Kilmore and Kilninian, and Torosay and Pennygowan. *Enumerator, D. A. M'Diarmid, Kilfinichen, Mull.*

Abstract of Report.—Crops secured early, and in good condition; quality good. Potatoes diseased from one half to one third of whole crop.

7.—Coll. *Enumerator, John Campbell, Cornaig, Coll.*

Abstract of Report.—Grain secured in good condition, and of good quality.

8.—Tyree. *Enumerator, Donald Campbell, Reef Cottage, Tyree.*

Abstract of Report.—Crops secured well, but deficient in quantity.

9.—Jura and Colonsay. *Enumerator, Neil M'Leod, Feolin, Jura.*

Abstract of Report.—Cereals never secured in better order. Oats good. Bere under an average. Turnips half a crop. Potatoes a poor crop, and about one fourth diseased.

10.—Morven, and Argyllshire portion of Ardnamurchan. *Enumerator, John A. Sellar, Ardtornish, Morven.*

Abstract of Report.—Oats secured in excellent condition. Turnips deficient in quantity and quality. Potatoes two thirds diseased.

3.—County of Ayr.

District No. 1.—Ballantrae, Barr, Colmonell, Dailly, Girvan, Kirkmichael, Kirkoswald, Maybole, and Straiton. *Enumerator, Alexander Ralston, Lagg, Ayr.*

Abstract of Report.—Harvest generally favourable, and crops well secured. Wheat inferior in quality. Other cereals average crops. Turnips and mangold deficient in quantity. Potatoes much diseased; about one ton per acre fit for farina-mill, but considerable proportion rotten.

2.—Auchinleck, Ayr, Coylton, Dalrymple, Dalmellington, Muirkirk, New Cumnock, Old Cumnock, Ochiltree, and Stair. *Enumerator, James Drennan, Holehouse, Ayr.*

Abstract of Report.—Harvest tedious, but no loss sustained by exposure. Wheat an inferior crop; other cereals an average. Turnips and mangold deficient. Cannot estimate extent of disease in potatoes.

3.—Craigie, Dundonald, Galston, Mauchline, Monkton and Prestwick, Newton, Riccarton, St. Quivox, Sorn, Symington, and Tarbolton. *Enumerator, Thomas Reid, Monkton Mill, Ayrshire.*

Abstract of Report.—Weather during harvest precarious, but by care and activity crops secured without loss. Cereals generally in average, but root-crops very deficient. Potatoes one third diseased.

4.—Ardrossan, Beith, Dalry, West Kilbride, Kilbirnie, Kilwinning, Largs, and Stevenston. *Enumerator, David Cuninghame, Chapelton, Ardrossan.*

Abstract of Report.—Wheat, three quarters well secured, and of good quality; remainder very inferior. Barley and rye average crops. Oats well secured; above average quantity, but rather light. Beans and pease inferior, and ill secured. Turnips and mangold deficient, but sound. Potatoes very inferior, one half diseased.

5.—Dreghorn, Dunlop, Fenwick, Irvine, Kilmarnock, Kilmaurs, Loudon, and Stewarton. *Enumerator, John Guthrie, Holms, Kilmarnock.*

Abstract of Report. Harvest late, but crops secured without injury. Cereals are thrashing well, but generally deficient in weight and quality, particularly wheat. Beans very deficient in quantity. Turnips and mangold much below average, particularly in undrained clay lands. Potatoes very bad three fourths diseased.

4.—County of Banff.

District No. 1.—Alvah, Banff, Bellie, Boyndie, Cullen, Fordyce, Forglen, Gamrie, Inverkeithny, Marnoch, Ordiquhill, and Rathven. *Enumerator, George Williamson, Auldtown, Turriff.*

Abstract of Report.—The cereals generally suffered from exposure, and are inferior in quality It is estimated that wheat and oats are deteriorated 15 per cent., and barley 10 per cent. Potatoes an inferior crop, with about one fourth diseased.

2.—Aberlour, Boharm, Botriphnie, Cabrach, Deskford, Grange, Inveravon, Keith, Kirkmichael, Mortlach, and Rothiemay. *Enumerator, James Black, Knock, Keith.*

Abstract of Report.—No part of the cereals secured before the rain. In the earlier parts of Rothiemay, Grange, Keith, and Aberlour, where the grain was partly cut when the weather broke, the deterioration is estimated at from 15 to 20 per cent.; elsewhere at from 5 to 6 per cent. Potatoes one-fourth diseased.

5.—County of Berwick.

District No. 1.—Abbey St. Bathans, Ayton, Buncle and Preston, Cockburnspath, Cranshaws, Coldingham, Chirnside, Edrom, Eyemouth, Foulden, Hutton, Ladykirk, Longformacus, Mordington, Swinton, and Whitsome. *Enumerator, John Wilson, Edington Mains, Chirnside.*

Abstract of Report.—Grain crops very bulky, and portion secured before the rains of excellent quality. A large proportion of the wheat which was exposed sprouted, and is unfit for food; much has already gone to the distilleries, at prices less by 4*s.* to 5*s.* per bushel than those of sound wheat. Oats exposed were also seriously damaged. Barley suffered less. Beans were unripe during bad weather, and were ultimately well secured; they are an abundant crop, and promise to be of good quality. Damage by heat in stack unusually great this year. Deterioration and loss from exposure, &c. estimated as follows:—Wheat one quarter well secured, three quarters deteriorated in value 40 per cent.; barley one half well secured, one half deteriorated in value 25 per cent.; oats one quarter well secured, three quarters deteriorated in value 33 per cent. Potatoes three eighths diseased.

2.—Channelkirk, Coldstream, Dunse, Earlston, Eccles, Fogo and Polwarth, Gordon, Greenlaw, Hume, Langton, Lauder, Legerwood, Mertown, Nenthorn, and Westruther. *Enumerator, Thomas Logan, Woodend, Dunse.*

Abstract of Report.—Nearly the whole of the crops out when the weather broke. Wheat deteriorated to such an extent that one third is estimated as unfit for food, and the remainder is of inferior quality. Barley and oats have also suffered, but not to so great an extent. Potatoes one third diseased.

6.—County of Bute.

District No. 1.—(*Bute.*) Kingarth, North Bute, Rothesay, and Meikle and Little Cumbray. *Enumerator, Samuel Girdwood, Little Kilmory, Rothesay.*

Abstract of Report.—Harvest most propitious. Cereals secured in excellent condition, and of good quality. Potatoes one third diseased.

2.—(*Arran.*) Kilmory and Kilbride. *Enumerator, James Allan, Clauchan, Arran.*

Abstract of Report.—Cereals secured in good condition, and of good quality. Potatoes very inferior crop, and one third diseased.

7.—County of Caithness.

District No. 1.—Bower, Latheron, Watten, and Wick. *Enumerator, George Brown, Watten Mains, Wick.*

Abstract of Report.—Cereals secured in good condition; a few stacks have heated. 2½ per cent. will cover consequent damage. Wheat inferior; other cereals good, but oats light. Turnips generally superior, but finger-and-toe occasional. Potatoes—red varieties sound, regents and kidneys slightly diseased.

2. Canisby, Dunnet, Halkirk, Olrig, Reay (*in Caithness*), and Thurso. *Enumerator, Alexander Henderson younger, of Stempster, Thurso.*

Abstract of Report.—Harvest operations unusually protracted, but little damage sustained. Wheat and barley are inferior. Oats fair, but with unusual proportion of light grain. Bere an average. Turnips good. Potatoes varying.

8.—County of Clackmannan.

Alloa, Clackmannan, Dollar, Logie, Tillicoultry, and Tulliallan (*in Perth*). *Enumerator, Thomas Ritchie, Bowhouse, Alloa.*

Abstract of Report.—Barley of average quality. Other cereals inferior which suffered from exposure. Wheat, one third deteriorated 15 to 20 per cent. Barley, one fifth deteriorated 10 to 15 per cent. Oats, three fourths 14 to 20 per cent. Beans from 8 to 16 per cent. Turnips and mangold good. Potatoes, one half diseased.

9.—County of Dumbarton.

Arrocher, Bonhill, Cardross, Cumbernauld, Dumbarton, Kilmaronock, East Kilpatrick, West Kilpatrick, Kirkintilloch, Luss, Roseneath, and Row. *Enumerator, Lorne Campbell, Roseneath.*

Abstract of Report.—Wheat and barley generally well secured, and of fair quality. Oats two thirds well secured—one third damaged 10 per cent. in value. Turnips—early sown, good—late sown, on damp land, very deficient. Potatoes above a half diseased.

10.—County of Dumfries.

District No. 1.—(*Upper Annandale.*) Applegarth, Dryfesdale, Hutton, Johnstone, Kirkpatrick-Juxta, Lochmaben, Moffat, St. Mungo, Tundergarth, and Wamphray. *Enumerator, John Graham younger, of Shaw, Lockerbie.*

Abstract of Report.—Cereals of average quality, and secured in good condition, except in some of the higher parishes; but, even there, loss was inconsiderable. Turnips good. Potatoes inferior, and one third to one half diseased.

2.—(*Lower Annandale.*) Annan, Cummertrees, Dalton, Dornock, Gretna, Hoddam, Kirkpatrick-Fleming, Middlebie, Mousewald, and Ruthwell. *Enumerator, Bradshaw Barker, Wysebyhill, Ecclefechan.*

Abstract of Report.—Cereals generally well secured, except in late and undrained districts. Wheat an average crop. Barley slightly damaged. In four parishes, where oats partially exposed, one seventh damaged 40 per cent. Beans an average. Turnips small, with more than usual disease. Potatoes bulkier crop than 1855, but one third diseased.

3.—(*Upper Nithsdale.*) Closeburn, Durrisdeer, Glencairn, Keir, Kirkconnell, Morton, Penpont, Sanquhar, and Tynron. *Enumerator, James Grierson, Morton Mains, Thornhill.*

Abstract of Report.—Cereals of average quality, little damaged by exposure, except in Sanquhar and Kirkconnell, where lots may have been one tenth. Turnips an average. Potatoes inferior, and about one tenth diseased.

4. (*Lower Nithsdale.*) Caerlaverock, Dumfries, Dunscore, Holywood, Kirkmahoe, Kirkmichael, Tinwald, and Torthorwald. *Enumerator, James W. Paterson, Pearmount, Dumfries.*

Abstract of Report.—Cereals generally well secured, and of fair quality, but still soft, and below an average weight. Turnips deficient. Mangold small, and run to seed. Potatoes about one fourth diseased, chiefly in the early varieties.

5.—(*Eskdale.*) Canonbie, Eskdalemuir, Ewes, Half-Morton, Langholm, and Westerkirk. *Enumerator, James Church, Tower of Sark, Canonbie.*

Abstract of Report.—Half of cereals secured in good condition, remainder deteriorated,—wheat 12½ per cent., barley 15 per cent., oats 25 per cent. Potatoes diseased nearly the half.

11.—County of Edinburgh.

District No. 1.—Mid-Calder, West-Calder, Corstorphine, Cramond, Currie, Kirknewton, South Leith, North Leith, and Ratho. *Enumerator, Peter M'Lagan younger, of Pumpherston, Mid-Calder.*

Abstract of Report.—About one third of cereals secured in good condition; remaining two thirds deteriorated in value, from exposure, from 20 to 25 per cent. Potatoes two thirds diseased.

2. Colinton, Dalkeith, Duddingston, Glencorse, Inveresk, Lasswade, Liberton, Newton, and St. Cuthberts. *Enumerator, John Finnie, Swanston, Edinburgh.*

Abstract of Report.—Except in Inveresk, where crops were generally better secured, only about one fourth of the wheat and oats secured in good condition, and three fourths deteriorated 20 per cent. Barley, three fourths secured, and one fourth deteriorated 14 per cent. Potatoes, one half diseased.

3.—Borthwick, Carrington, Cockpen, Cranston, Crichton, Fala, Heriot, Newbattle, Penicuick, Temple, and Stow. *Enumerator, James M'Lean, Braidwood, Penicuick.*

Abstract of Report.—Cereals generally suffered from exposure. Loss on wheat in the field 20 per cent., and remainder damaged by sprouting and discoloration; on barley 6 per cent., with less damage otherwise, though discoloured; on oats 20 per cent., with remainder sprouted and damaged. This estimate is irrespective of injury from heating in the stack. Bere, beans, and pease but little damaged. Potatoes one fifth diseased.

12.—County of Elgin.

Abernethy, Alves, Birnie, Cromdale, Dallas, Drainy, Duffus, Duthil, Dyke, Edinkillie, Elgin, Forres, Kinloss, Knockando, St. Andrews-Lhanbride, New Spynie, Rafford, Rothes, Speymouth, and Urquhart. *Enumerator, James Geddes, Orbliston, Fochabers.*

Abstract of Report.—About 4 per cent. only of the crops secured before the weather broke. In Abernethy, Cromdale, Dallas, and parts of Edinkillie and Knockando, all upland districts, the crop was secured in average condition in consequence of the lateness of the harvest. In the earlier districts the deterioration from exposure is estimated at 20 per cent. on wheat, 10 per cent. on barley, and 20 per cent. on oats. Potatoes diseased from one third to one half of the crop.

13.—County of Fife.

District No. 1.—Beath, Carnock, Culross (*in Perthshire*), Dalgetty, Dunfermline, Inverkeithing, Saline, and Torryburn. *Enumerator, R. E. Beveridge, Urquhart, Dunfermline.*

Abstract of Report.—Fully two thirds of the cereals suffered from exposure. Deterioration is estimated in wheat at 12 per cent., on barley at 10 per cent., and on oats at 20 per cent. The varieties in weight are extraordinary, and the proportion of light grain great. One half of potatoe crop unsound, and the disease still progressing.

2.—Abbotshall, Aberdour, Auchterderran, Auchtertool, Ballingry, Burntisland, Dysart, Kennoway, Kinghorn, Kinglassie, Kirkcaldy, Leslie, Markinch, Scoonie, and Wemyss. *Enumerator, James B. Fernie of Kilmux, Kennoway.*

Abstract of Report.—Crops generally exposed to weather. Wheat, one fourth secured in good condition; three fourths, of inferior quality, sprouted, and deteriorated in value 30 per cent. Barley, two thirds secured in good condition; one third deteriorated 15 per cent. Oats, one third secured in good condition; two thirds deteriorated 30 per cent. Beans and pease in good order, Potatoes nearly one half diseased, and loss still going on.

3.—Abdie, Auchtermuchty, Balmerino, Ceres, Collessie, Creich, Cults, Cupar, Dairsie, Dunbog, Falkland, Flisk, Kettle, Kilmany, Logie, Monimail, Moonzie, Newburgh, and Strathmiglo. *Enumerator, William Dingwall, Ramornie, Ladybank.*

Abstract of Report.—Large proportion of cereals inferior in quality. Wheat, one third secured in good condition; two thirds deteriorated 33 per cent. Barley, one third secured in good condition; two thirds deteriorated 20 per cent. Oats, one ninth secured in good condition; remainder deteriorated 25 per cent. Beans and pease generally deteriorated 5 per cent. Potatoes diseased nearly one half.

4.—Anstruther (Easter and Wester), Cameron, Carnbee, Crail, Denino, Elie, Ferry-port-on-Craig, Forgan, Kemback, Kilconquhar, Kilrenny, Kingsbarns, Largo, Leuchars, Newburn, Pittenweem, St. Andrews, St. Leonards, and St. Monance. *Enumerator, James Balfour, Milton, Leuchars.*

Abstract of Report.—Quality of cereals secured early—an average. Wheat, one third secured in good condition; two thirds deteriorated 30 per cent. Barley, one third secured in good condition; two thirds deteriorated 15 per cent. Oats one thirtieth secured in good condition; remainder deteriorated 20 per cent. Rye, one half secured in good condition; one half injured 15 per cent. Beans and pease all exposed and injured 10 per cent.

14.—County of Forfar.

District No. 1.—Airlie, Arbirlot, Auchterhouse, Barry, Cortachy, Dundee, Essie and Nevy, Glammis, Glenisla, Inverarity, Kettins, Kingoldrum, Kinettles, Kirriemuir, Liff and Benvie, Lintrathen, Lundie and Fowlis Easter, Mains and Strathmartin, Monifieth, Monikie, Murroes, Newtyle, Panbride, Ruthven, and Tealing. *Enumerator, John Alexander, Mains of Glammis.*

Abstract of Report.—Wheat, one tenth secured in good condition; remainder deteriorated 40 per cent. Barley, one sixth secured; remainder deteriorated 25 per cent. Oats, one eighth secured; remainder deteriorated 20 per cent. Beans 5 per cent. deteriorated. Potatoes one half diseased.

2.—Aberlemno, Arbroath, Brechin, Caraldstone, Carmylie, Craig, Dun, Dunnichen, Edzell, Farnell, Fern, Forfar, Guthrie, Inverkeillor, Kinnell, Kirkden, Lethnot, Lochlee, Logie-Pert, Lunan, Marytoun, Menmuir, Montrose, Oathlaw, Rescobie, St. Vigeans, Stracathro, and Tannadyce. *Enumerator, Robert Hector, Kintrockat, Brechin.*

Abstract of Report.—Quality of cereals generally inferior, owing to the discoloration, sprouting, and heating in stack. Wheat, one twentieth secured in good condition; remainder deteriorated 30 per cent. Barley and bere, one twelfth secured in good condition; remainder deteriorated 25 per cent. Oats, one sixteenth secured in good condition; remainder deteriorated 25 per cent. Beans and pease, none secured in good condition, all deteriorated 10 per cent. (this deterioration includes a quantity entirely lost in the field.) Potatoes one third diseased.

15.—County of Haddington.

District No. 1.—Haddington, Gifford, Garvald, Bolton, and Morham. *Enumerator, George Harvey, Whittingham Mains, Prestonkirk.*

Abstract of Report.—In parish of Haddington about one fifth of the cereals secured before the weather broke; in the other parishes not above one twentieth. Wheats and oats suffered most, and were deteriorated about thirty per cent.; barley about 15 per cent. Turnips an average crop. Potatoes one half diseased.

2.—Humbie, Ormiston, Pentcaitland, and Salton. *Enumerator, Henry M. Davidson, Holyn Bank, Haddington.*

Abstract of Report.—About one eleventh of the cereals only secured before the weather broke, the remainder much deteriorated by exposure. The former is good in quality, the latter inferior. Potatoes one half diseased.

3.—Gladsmuir, Prestonpans, and Tranent. *Enumerator, David Wright, Southfield, Gladsmuir.*

Abstract of Report.—One third of the cereals secured in good condition, and of an average quality; two thirds deteriorated by exposure 30 per cent. Beans and pease of average quality. The weight of grain given refers to the portion secured early. Potatoes diseased one half.

4.—Aberlady, Athelstaneford, Dirleton, and North Berwick. *Enumerator, George Hope, Fenton Barns, Drem.*

Abstract of Report.—Two fifths of wheat, three fourths of barley, one fourth of oats, secured in good condition, and of good quality; remainder deteriorated from 20 to 25 per cent. in value. Potatoes one half diseased.

5.—Prestonkirk, Stenton, Whitekirk, and Whittingham. *Enumerator, Mathew Buist, Tyninghame, Prestonkirk.*

Abstract of Report.—One half of the cereals exposed to weather, and deteriorated in value from 25 to 30 per cent. The quality of the grain secured early is good. Potatoes diseased from one third to one half.

6.—Dunbar, Innerwick, Oldhamstocks, and Spott. *Enumerator, P. H. Hume, Lawfield, Cockburnspath.*

Abstract of Report.—Not above one third of the cereals secured in good condition, and fully one half deteriorated in value 50 per cent. Wheat bad. Barley indifferent. Oats very bad. Beans and pease fair. Turnips and mangold good. Potatoes diseased one third

16.—County of Inverness.

District No. 1.—Kilmorack, Kiltarlity, and Kirkhill. *Enumerator, John Peter, Croyard, Beauly.*

Abstract of Report.—Cereals are very inferior. Their deterioration from exposure is estimated at 20 per cent., and 10 per cent. is unfit for the market. Potatoes diseased one third.

2.—Urquhart and Glenmoriston. *Enumerator, John Sinclair, Borlumbeg, Drumnadrochit.*

Abstract of Report.—In the lower part of the district one third of the cereals cut before the weather broke, and suffered from sprouting; the grain generally of an inferior character. In the higher districts the crops did not ripen properly, which will increase the proportion of inferior grain. Potatoes one half diseased.

3.—Abertarff and Boleskine, Daviot, Dores, and Inverness and Bona. *Enumerator, Hugh Fraser, Balloch, Inverness.*

Abstract of Report.—Cereals all suffered from exposure. At the time the weather broke, about one half had been cut in the lower part of the district, but little in the higer. The quality in both inferior; much sprouted in the lower grounds, and ill-ripened in the high. There is therefore a large proportion of light grain, which has tended to reduce the averages. Disease in potatoes varied from one half to three fourths and four fifths of the crop.

4.—Alvie, Kingussie, Laggan, and Rothiemurchus. *Enumerator, James M'Pherson, Biallid, Kingussie.*

Abstract of Report.—Crops secured in good conditon, having suffered little or no deterioration from exposure. There is no unsound, but perhaps a larger proportion than ordinary of light grain. Potatoes diseased about one eighth.

5. Ardnamurchan (*Inverness-shire part*), Glenelg, Kilmallie (*Inverness-shire part*), and Kilmonivaig. *Enumerator, James Bett, Strone, Fort-William.*

Abstract of Report.—Crops secured in good condition, and of fair average quality. Potatoes diseased about one fifth.

6.—(*Skye.*)—Bracadale, Duirnish, Kilmuir, Portree and Rasay, Sleat, Snizort, and Strath. *Enumerator, Donald M'Leod, Kingsburgh, Portree.*

Abstract of Report.—Harvest early and favouable, and crops secured in excellent condition, and of good quality. Accounts of potato disease are so conflicting as to preclude an estimate.

7.—Harris and Bernera. *Enumerator, Kenneth Macdonald, Scaristavore, Harris, Stornoway.*

Abstract of Report.—Harvest favourable; crops well secured; quality good, except potatoes.

8.—North Uist. *Enumerator, Alexander Macdonald, Balranald, Lochmaddy.*

Abstract of Report.—Cereals about an average in respect of quality. Green crops deficient, particularly potatoes, which in some places are nearly a total failure.

9.—South Uist. *Enumerator, Norman Macdonald, Nunton, Lochmaddy.*

No Report.

10.—Barra. *Enumerator, Dr. M'Gillivray, Eoligary, Lochmaddy.*

Abstract of Report.—Harvest favourable, and cereals of fair quality.

11.—Small Isles.

No Report.

17.—County of Kincardine.

Arbuthnot, Banchory-Devenick, Banchory Ternan, Benholm, Bervie, Dunottar, Durris, Fettercairn, Fetteresso, Fordoun, Garvock, Glenbervie, Kinneff, Laurencekirk, Maryculter, Marykirk, Nigg, St. Cyrus, and Strachan. *Enumerator, James Farquharson, Auchinblae.*

Abstract of Report.—Wheat one tenth well secured, nine tenths deteriorated 33 per cent. Barley one fourth well secured, three fourths deteriorated 14 per cent. Oats nearly all exposed, and deteriorated 17 per cent. Rye one fifth well secured, four fifths deteriorated 16 per cent. Bere one fourth well secured, three fourths deteriorated 14 per cent. Beans and pease little injured, but not all secured on 15th November. Turnips and mangold good. Potatoes one third diseased.

18.—County of Kinross.

Arngask, Cleish, Fossoway, Kinross, Orwell, and Portmoak. *Enumerator, Andrew Douie, Blair-Adam.*

Abstract of Report.—Cereals promised to be much above an average, more particularly oats, but all suffered from exposure. About one tenth of the wheat, two thirds of the barley, but almost no oats, were secured in fair condition. The remainder of the wheat and barley, and nearly the whole oat crop, lost about one third from sprout and handling, and what is marketable is deteriorated in quality and weight. Turnips an average crop in dry, but very inferior in wet, soils. Potatoes about one half unsound, and disease progressing.

19.—Stewartry of Kirkcudbright.

District No. 1.—Colvend, Irongray, Kirkbean, Kirkpatrick-Durham, Kirkgunzeon, Lochrutton, New Abbey, Terregles, Troqueer, and Urr. *Enumerator, Thomas Lawrie, Terregleston, Dumfries.*

Abstract of Report.—Weather during harvest was uncertain and precarious, but the grain was mostly secured in good condition, and is of fair average quality. Potatoes one third diseased.

2.—Buittle, Crossmichael, Kelton, Kirkcudbright, Parton, and Rerrick. *Enumerator, Robert M'Knight of Barlochan, Castle Douglas.*

Abstract of Report.—From four fifths to five sixths of cereals secured in very good condition; remainder was much deteriorated by exposure. Wheat and oats are below an average. Potatoes two fifths diseased.

3.—Anworth, Balmaghie, Borgue, Girthon, Kirkmabreck, Minnigaff, Tongland, and Twynholm. *Enumerator, Walter M'Culloch, of Kirkclaugh, Gatehouse.*

Abstract of Report.—Cereals secured about the usual period, in good condition, and of good quality. Turnips and mangold good. Potatoes—one third of early, and one sixth of late, varieties diseased.

4.—Balmaclellan, Carsphairn, Dalry and Kells. *Enumerator, James Barbour, of Bogue, Castle Douglas.*

Abstract of Report.—Crops secured in good condition, and of excellent quality. Potatoes a variable but inferior crop, and one third diseased.

20.—County of Lanark.

District No. 1.—Avondale, Barony, Blantyre, Bothwell, Cadder, Cambuslang, Cambusnethan, Carmunnock, Dalserf, Dalziel, Glasgow, Glassford, Govan, Hamilton, East-Kilbride, New Monkland, Old Monkland, Rutherglen, Shotts, and Stonehouse. *Enumerator, William Forrest of Treesbanks, Allanton, Hamilton.*

Abstract of Report.—One third of the cereals secured in good condition; two thirds were stacked rather damp. Potatoes diseased fully one third.

2.—Bigar, Carluke, Carmichael, Carnwath, Carstairs, Covington, Crawford, Crawfordjohn, Culter, Dolphington, Douglas, Dunsyre, Lanark, Lesmahagow, West-Liberton, Pittenain, Symington, Walston, Wandell and Lamington, and Wiston and Roberton. *Enumerator, James Brown, Libberton Mains, Lanark.*

Abstract of Report.—No part of crop secured before weather broke. About one half then cut, which suffered much from sprout, and from heat in stack. Uncut portion lost by shaking, but in better condition, and yields a finer sample. None of the crop well secured, and general deterioration great, though difficult to estimate, from varieties of condition arising from different causes.

21.—County of Linlithgow.

Abercorn, Bathgate, Borrowstowness, Carriden, Dalmeny, Ecclesmachan, Kirkliston, Linlithgow, Livingston, Torphichen, Uphall, and Whitburn. *Enumerator, Robert J. Thomson, Hangingside, Linlithgow.*

Abstract of Report.—Wheat, one tenth secured in good condition; nine tenths deteriorated 33 per cent. Barley, one half secured in good conditon; one half deteriorated 12 per cent. Oats nearly all deteriorated 25 per cent. Beans and pease all exposed, but little damaged. Potatoes diseased one half.

22.—County of Nairn.

Ardclach, Auldearn, Ardersier, Cawdor, Croy, Nairn, Moy, and Petty. *Enumerator, James Mitchell, Mills of Nairn, Nairn.*

Abstract of Report.—Very little grain secured before the weather broke. Wheat considerably sprouted. Barley discoloured, but sound. Oats 5 per cent. deteriorated. Rye and bere tolerable. Beans and pease soft. Turnips excellent; mangold good. Potatoes one half diseased.

23.—County of Orkney.

District No. 1.—(*Mainland.*)—Birsay and Harray, Evie and Rendal, Firth and Stennis, Orphir, Kirkwall or St. Ola, Holm, St. Andrew and Deerness, Sandwick, and Stromness. *Enumerators, George Folsetter, Evie; George Frisken, Mill of Kirbuston, Orphir; Robert Armit, Kirkwall; and William Watt, Skaill.*

Abstract of Report.—crops generally a fair average, but deficient in weight, in consequence of low temperature and want of sunshine during summer. Disease in potatoes generally confined to the finer varieties; Orkney reds safe, and a good crop.

District No. 2.—(*North Isles.*) Cross and Burness, Lady and Sanday, North Ronaldshay, Eday and Phara, Shapinshay, Stronsay, Rousay and Egilshay, Westray, and Papa Westray. *Enumerators, Jerome Denison, West Brough; George Davidson, Greentoft; James Fullarton, Strathor; John Forbes, Stronsay; George Learmonth, Westness; and Thomas Traill, of Holland.*

Abstract of Report.—crops, though late, secured without injury, and nearly an average in quality, but deficient in weight, in consequence of low temperature in summer. Potatoes diseased.

District No. 3.—(*South Isles.*) Hoy and Graemsay, Walls, &c., South Ronaldshay, and Flotta. *Enumerators, William Banks, Walls; and William Cromarty, South Ronaldshay.*

Abstract of Report.—Crops, though late, secured in good order. Oats lighter than last year. Bere of good quality. Potatoes and turnips good.

Zetland.

The Islands of Zetland.

Abstract of Report.—Harvest later than usual, but weather fine. Oats an average in bulk, but deficient in weight. Turnips in general good. Potatoes a half crop, and much diseased.

24.—County of Peebles.

Broughton, Drumelzier, Eddlestone, Innerleithen, Kirkurd, Linton, Lyne and Megget, Manor, Newlands, Peebles, Skirling, Stobo, Traquair, and Tweedsmuir. *Enumerator, James Murray, Drochil Castle, Noblehouse.*

Abstract of Report.—Barley mostly secured in good condition, but not of fine quality. Oats deteriorated by exposure 12 per cent., and inferior in quality. Potatoes one third diseased.

25.—County of Perth.

District No. 1.—Abernyte, Errol, Inchture, Kilspindie, Kinfauns, Kinnaird, Longforgan, and St. Madoes. *Enumerator, James Young, Cairney Mill, Perth.*

Abstract of Report.—Much of the grain so sprouted as to be fit only for distillation. Estimated deterioration from exposure—wheat 28 per cent.; barley 18 per cent.; oats 23 per cent. Potatoes three fourths diseased; unsound portion generally converted into flour, and brings at the mills nearly half price.

2.—Abernethy, Auchterarder, Dron, Dumbarney, Dunning, Forteviot, Forgandenny, Glendovan, Muckhart, and Muthill. *Enumerator, Thomas W. Lorimer, Belkie, Auchterarder.*

Abstract of Report.—Cereals of all kinds, especially oats and wheat, promised to be far above an average, but all suffered from exposure. Fully one third of the wheat and barley, one half of the oats, and almost all the beans and pease, were unsecured by the end of October, and were deteriorated by lodging and shaking, by wet in stook and heat in stack, the latter cause of damage having operated also on what had been previously secured. One third of wheat, mostly autumn sown, pretty good; two thirds deteriorated, raw and light. Barley much lodged, and inferior in quality. Oats well filled, but discoloured and damaged by rain. Beans and pease heated in stack. Turnips very good. Potatoes diseased about one half.

3.—Caputh, Cargill, Collace, Kinnoull, Lethendy, Scone, and St. Martins. *Enumerator, John M. Matthew, Colin, Perth.*

Abstract of Report.—Wheat one fourth secured in good condition, three fourths deteriorated 50 per cent. Barley two thirds secured in good condition, one third deteriorated 33 per cent. Oats one half secured in good condition, one half deteriorated 33 per cent. Beans and pease all outstanding; beans suffered little; pease lost about one half. Potatoes diseased about one half.

4.—Auchtergaven, Kinclaven, Moneydie and Logiealmond, Methven, Perth, Redgorton and Stanley, Rhind, and Tibbermuir. *Enumerator, Thomas Wylie, of Airliewight, Bankfoot, Perth.*

Abstract of Report.—Weight and quality of cereals vary so as to make an estimate difficult, but generally they are lighter than for many years back. Wheat was bulky, and yields fairly, but very deficient in weight, and injured by sprouting from 12 to 20 per cent. Barley is of better quality. Oats were a bulky crop, but much deteriorated, being light, and deteriorated by sprouting about 17 per cent. Early sown turnips an average; late sown inferior. Potatoes a heavy crop, but much diseased; in low heavy land, from one half to nearly the whole crop gone; in lighter soil, three fourths safe, but giving way in the pits.

5.—Aberdalgie, Comrie, Crieff, Fowlis Wester, Gask, Mrdderty, Monzie, Monzievaird, and Trinity-Gask. *Enumerator, Thomas Ross, Bachilton, Perth.*

Abstract of Report.—Harvest the most unfavourable experienced for many years; and great damage has been sustained, not only on the field, but in the stackyard, from heating, and by handling and rebuilding stacks. Deterioration estimated as follows:—Wheat one fifth well secured, remainder deteriorated from 35 to 40 per cent. Barley secured in better condition than any other crop, and not deteriorated above 5 or 6 per cent. Oats one tenth secured in good condition, remainder deteriorated 50 per cent.;—(this crop has suffered particularly from sprouting and heat in stack). Beans and pease generally little damaged. Potatoes one half diseased.

6.—Aberfoyle, Balquhidder, Blackford, Callander, Dunblane, Kilmadock, Kincardine, and Port of Monteith. *Enumerator, Robert Patterson, Offers, Stirling.*

Abstract of Report.—Wheat and barley generally secured in good condition, and of good quality. Oats one fourth secured in good condition, three fourths deteriorated about 20 per cent. Beans generally well secured. Potatoes one third diseased.

7.—Dull, Fortingall, Kenmore, Killin, Logierait, and Weem. *Enumerator, F. N. Menzies, Tirinie, Aberfeldy.*

Abstract of Report.—One third of cereals secured in good condition, two thirds deteriorated, and of that proportion one fifth lost. Wheat inferior. Barley and bere discoloured. Oats, beans, and pease an average. Turnips variable. Potatoes diseased one fifth.

8.—Blair-Athole, Dunkeld, Little Dunkeld, and Moulin. *Enumerator, Alexander Conacher, Mains of Pitlochrie, Pitlochrie.*

Abstract of Report.—General deterioration to cereals from exposure and being badly secured, 25 per cent., with great differences in weight, and an unusual proportion of light grains. Potatoes about one third diseased.

9.—Alyth, Bendochy, Blairgowrie, Cluny, Coupar-Angus, Kinloch, Kirkmichael, Meigle, and Rattray. *Enumerator, Robert Geekie, Rosemount, Blairgowrie.*

Abstract of Report.—Deterioration estimated at 40 per cent. on wheat, 25 per cent. on barley, and 20 per cent. on oats. Potatoes one half diseased.

26.—County of Renfrew.

District No. 1.—Cathcart, Eaglesham, Mearns, and Neilston. *Enumerator, Arthur Mather, Netherplace, Newton Mearns.*

Abstract of Report.—Harvest favourable, and crops well secured; quality an average. Potatoes two fifths diseased.

2.—Eastwood, Paisley and Abbey, and Renfrew. *Enumerator, John Colquhoun, Corkerhill, Pollockshaws.*

Abstract of Report.—Crops secured without much injury. Potatoes one third diseased.

3.—Erksine, Houston, Inchinnan, Kilbarchan, and Lochwinnoch. *Enumerator, Alexander Wilson, Forehouse, Kilbarchan.*

Abstract of Report.—Lateness of harvest and weather affected quality of crops. Turnips are deficient. Potatoes lifted generally for early sale, before disease appeared.

4.—Greenock, Innerkip, Kilmalcolm, and Port Glasgow. *Enumerator, James Foster King, Easter Longhaugh, Bishopton.*

Abstract of Report.—Crops well secured, except in high district of Kilmalcolm. Wheat is inferior. Oats—the staple grain of the district—rather deficient, average having been reduced by effects of weather in Kilmalcolm, where the comparative breadth was large. Green crops very deficient. Potatoes not above one fourth diseased, except in Innerkip, where one half unsound.

27.—County of Ross and Cromarty.

District No. 1.—(*Easter Ross.*) Edderton, Fearn, Kilmuir, Kincardine, Logie Easter, Nigg, Rosskeen, Tain, and Tarbert. *Enumerator, Crawford Ross, Cadboll, Tain*

Abstract of Report.—But little of the crop secured before the rains, and even that portion damaged by heat in stack; general deterioration in value from 12 to 14 per cent. Grain would generally turn out well if favoured with frosty weather, except the wheat, which, in some of the best land, suffered from mildew. Weights per bushel are only given as an approximation. Variation is this year so great as to impede an estimate. Potatoes diseased about one half.

2.—(*Wester Ross.*)—Alness, Avoch, Contin, Cromarty, Dingwall, Fodderty, Killearnan, Killtearn, Knockbain, Resolis, Rosemarkie, Urquhart, and Urray. *Enumerator. William Murray Kilcoy, Dingwall.*

Abstract of Report.—About one third of the crop secured before the weather broke. Wheat was imperfectly ripened from want of sunshine, and what was exposed suffered much deterioration from sprouting and discoloration, and is very deficient in weight. Barley and oats less sprouted, but discoloured and light.

3.—Gairloch. *Enumerator, Charles Robertson, Auchtercairn, Gairloch.*

Abstract of Report.—Crops secured without injury, and of good quality. Potatoes diseased nearly one half.

4.—Lochbroom. *Enumerator, David Mundell, Auchendrean, Lochbroom.*

Abstract of Report.—Crops secured without injury, and of good quality. Potatoes one third diseased.

5.—Applecross, Glenshiel, Kintail, Lochalsh, and Lochcarron. *Enumerator, David Logan, Auchtertyre, Lochalsh.*

Abstract of Report.—Crops secured without injury, and of good quality. Potatoes one eighth diseased.

6.—(*Lewes.*) Barvas, Lochs, Stornoway, and Uig. *Enumerator, Murdoch M'Aulay, Lynshader, Stornoway.*

Abstract of Report.—Crop secured without injury, and of good quality. Potatoes much diseased.

28.—County of Roxburgh.

District No. 1.—Ednam, Kelso, Smailholm, Sprouston, and Stitchell. *Enumerator, John Dudgeon, Spylaw, Kelso.*

Abstract of Report.—Quality of crop varies. Proportion well secured is of average quality. What was exposed is very inferior. Deterioration estimated as follows:—Wheat one fifth well secured, four fifths deteriorated 35 per cent.; barley four fifths well secured, one fifth deteriorated 20 per cent.; oats one fifth well secured, four fifths deteriorated 15 per cent. The weights given in Table No. 6. refer to crop secured before weather broke. Potatoes one third diseased.

2. Hownam, Linton, Morebattle, and Yetholm. *Enumerator, Adam B. Boyd, of Cherry-trees, Kelso.*

Abstract of Report.—Not more than one twelfth of the crops secured before the rains. Remainder was very much deteriorated by sprouting, loss of colour, &c.; but damage cannot be estimated. The weights in table refer to crops secured before weather broke. Potatoes one third diseased.

3.—Crailing, Eckford, Makerstoun, and Roxburgh. *Enumerator, James Roberton, Ladyrig, Kelso.*

Abstract of Report.—Deterioration from exposure is estimated at,—Wheat one fourth well secured, three fourths deteriorated 30 to 35 per cent.; barley three fourths well secured, one fourth deteriorated 10 per cent.; oats one third well secured, two thirds deteriorated 20 per cent.; rye none well secured, all deteriorated 20 per cent.; beans none well secured, all deteriorated 10 per cent. Quality of crops well secured is good, and weights given in the table refer exclusively to that portion. Potatoes nearly one half diseased.

4.—Bedrule, Hobkirk, Jedburgh, Oxnam, and Southdean. *Enumerator, John Ord, of Muirhouselaw, Nisbet, Kelso.*

Abstract of Report.—Most disastrous harvest in recollection. Three fourths of the wheat, one half of the barley, nine tenths of the oats, and all the beans and peas exposed to weather; and deterioration in value on the whole crop will not be less than 35 per cent. on wheat, 10 per cent. on barley, and 23 per cent. on oats. Potatoes very inferior, and one half diseased.

5.—Ancrum, Bowden, Lilliesleaf, Maxton, Melrose, Minto, and St. Boswells. *Enumerator, Nicol Milne, of Faldonside, Melrose.*

Abstract of Report.—About one twelfth of the cereals secured in good condition, and of good quality. Remainder suffered seriously from exposure, and is very deficient in quantity and quality, with an unusual proportion of light grain. The average of deterioration in value estimated at from 35 to 40 per cent. Beans harvested in tolerable order, and a good crop. Turnips fully an average. Potatoes an average in bulk, but two thirds diseased.

6.—Ashkirk, Cavers, Hawick, Kirkton, Roberton, and Wilton. *Enumerator, Daniel Mather, Hallrule, Bonchester Bridge.*

Abstract of Report.—About one twentieth of the wheat and oats, and one fifth of the barley secured in good condition. Deterioration to remainder from exposure to weather and heat in stack estimated at 30 per cent. Beans tolerably well harvested. Potatoes one half diseased.

7.—Castleton. *Enumerator, John Jardine, Arkleton, Langholm.*

Abstract of Report.—Crops secured without much injury. About one third was exposed and damaged, but not to a great extent. Turnips are deficient. Potatoes one half diseased.

29.—County of Selkirk.

Ettrick, Galashiels, Kirkhope, Selkirk, and Yarrow. *Enumerator, John Anderson, Muirhouse, Stow.*

Abstract of Report.—About one eighth of the cereals secured in good order, and of good quality. The remainder much deteriorated by exposure; but it is difficult to estimate damage, as it was frequently greater in the stack than in the stook. Potatoes diseased one half.

30.—County of Stirling.

District No. 1.—Airth, Alva, Bothkennar, Denny, Dunipace, Falkirk, Gargunnock, Larbert, Lecropt, Muiravonside, Polmont, St. Ninians, Slamannan, and Stirling. *Enumerator, William Forrester, Stewarthall, Stirling.*

Abstract of Report.—Wheat two thirds well secured, one third deteriorated 25 per cent. Oats one third well secured, two thirds deteriorated 40 per cent. Barley little damaged. Beans deteriorated 10 per cent. Potatoes about two fifths unsound, and disease still progressing.

2.—Baldernock, Balfron, Buchanan, Campsie, Drymen, Fintry, Killearn Kilsyth, Kippen, and Strathblane. *Enumerator, James Horne, New Mills, Campsie.*

Abstract of Report.—Crops pretty well secured. Potatoes about one third diseased; value of unsound nearly one half that of good.

31.—County of Sutherland.

District No. 1.—Farr, Tongue, Eastern portion of Durness and Reay (*in Sutherland*). *Enumerator, Alexander Clarke, Eriboll, Tongue.*

Abstract of Report.—Crops generally secured in good condition. Potatoes, on an average, about one twentieth diseased.

2.—Assynt, Edderachillis, and Western portion of Durness. *Enumerator, Evander M'Iver, Scourie.*

Abstract of Report.—Cereals promised to be above an average, but suffered from bad weather in September, and there is consequently a considerable proportion of damaged and light grain. Turnips were checked by wet in July. Potatoes about one third unsound when dug, and disease still progressing in pit.

3.—Dornoch, Creich, Lairg, and Rogart. *Enumerator, Robert B. Sangster, Golspie.*

Abstract of Report.—Crops about three weeks later than usual in being secured, but not much injured. An average in point of quality. Any damage observable principally caused by heating in stack. Potatoes about one half diseased.

4.—Clyne, Golspie, Kildonan, and Loth. *Enumerator, Charles Hood, Inverbrora, Golspie*

Abstract of Report.—Crops generally well secured, but below average weight. Potatoes in some places about one third diseased.

32.—County of Wigtown

District No. 1.—(*Machars.*) Glasserton, Kirkinner, Kirkcowan, Mochrum, Penninghame, Sorby, Whithorn, and Wigtown. *Enumerator, Alexander Aitken, Bladnoch, Wigtown.*

Abstract of Report.—Crops secured without difficulty, and undamaged. Wheat and barley inferior. Oats above an average. Rye and bere much below it. Turnips and mangold an average. Potatoes one third diseased.

2.—(*Rhinns.*) Inch, Kirkcolm, Kirkmaiden, Leswalt, Old Luce, New Luce, Portpatrick, and Stoneykirk. *Enumerator, John Crawford, Glenhead, Stranraer.*

Abstract of Report.—Crops secured without difficulty, or more than ordinary damage. Potatoes above one half diseased.

BISHOPS (SCOTLAND).

RETURN to an Order of the Honourable The House of Commons, dated 26 July 1856;—*for*,

COPIES or EXTRACTS "of any Correspondence relating to the Discontinuance of an Allowance heretofore made to the Bishops of the Episcopal Communion in *Scotland*."

Unto the Lords Commissioners of Her Majesty's Treasury.

The Petition of Sir James M. Riddell, Bart., Sir John Stuart Forbes, Bart., Mr. Sheriff Sandford, Mr. Sheriff Urquhart, Mr. J. Hay Mackenzie, Mr. W. Pitt Dundas, Sir Archibald Edmonstone, Bart., John Murray, Esq., and Mr. William Forbes, Trustees of the Scots Episcopal Fund,

Humbly showeth,

That your petitioners are appointed by virtue of an Act of Parliament to administer a small fund for behoof of the bishops and clergy of the Scottish Episcopal Church; that this fund affords to six of the bishops a sum of 150 *l.* per annum, which is the entire amount of the revenue of each bishop of the Church; in other words, after providing themselves with houses, they do not receive more than 50 *l.* per annum for the support of their families and for the expense of their visitations.

That the clergy possess on the average incomes of 90 *l.* without parsonages, some being higher, and others not exceeding 60 *l.* or 70 *l.*

That in 1815, when these payments were less than they now are, the Government made a grant of 1,200 *l.*, which was divided between the six bishops and some of the more necessitous of the clergy. This grant was made every second year (with one slight intermission); but representations being made in 1846 to the effect that, being a charitable gift, it should be paid annually along with the grants to other dissenting ministers, the Government saw the justice of the appeal, and made, under the auspices of the late Mr. Goulburn and Sir George Clerk, an interim grant of 1,000 *l.* preparatory to making the 1,200 *l.* annual. A change of Government prevented the matter being then carried out, but the undersigned had in 1854 an interview with the Earl of Aberdeen, and asked for an annual grant of 100 *l.* for each bishop, and 15 *l.* for the poorest of the clergy. His Lordship thought the request "a reasonable one," and was prepared to recommend a grant of 2,000 *l.* per annum for adoption; but the matter was delayed, and the breaking out of the war stopped the negociation for a time.

The bishops were in 1815 six in number, the clergy about 70 or 80; the number is now 7 and 160 respectively. The Episcopal proprietors have imposed on them the principal weight of supporting the Established Church of Scotland by payments of tithes always increasing every 20 years; and, moreover, have heavy payments analogous to church-rates for the re-building and repairing of churches, manses, schools, and schoolmasters' houses, which they are liable to at the instance of the Presbytery, without much power of objecting. These casual payments have hitherto prevented chapels and parsonages being built for their own religious persuasion, and have cramped the power of the Episcopal communion to provide for her clergy.

Your

Your petitioners therefore pray your Lordships to make at this time the customary payment of 1,200*l.*, and to consider favourably the request to make this charitable grant an annual one, on the understanding that its continuance shall depend upon the fate of the Regium Donum to the Irish Presbyterian Church and the dissenting communities of England.

Signed on behalf of himself and the other Trustees of the Scottish Episcopal Fund by

Coopersale by Epping, 16 May 1856. (signed) *W. Forbes.*

Copy of Treasury Minute, dated 24 June 1856.

Write to the Trustees of the Scotch Episcopal Fund, and state, in reference to their application for a grant of 1,200 *l.*, that great objections having been raised in Parliament to the payments which have hitherto been made to them from Civil Contingencies, in the justice of which my Lords are compelled to concur, they have found it necessary to consider whether or not they would be justified in presenting to Parliament an estimate for the payment of the money heretofore granted to them, or whether such grants should be hereafter discontinued. In considering these questions, my Lords have carefully inquired into the origin and the history of these grants, and into the purpose to which they have been applied, and, after due deliberation, their Lordships have come to the decision that they would not be justified in asking Parliament to vote grants for the objects referred to. My Lords have therefore reluctantly felt it their duty to discontinue these grants for the future.

Inasmuch however as the Trustees may have made arrangements on the expectation of this grant being continued in the present year, my Lords are pleased to direct the payment to be made as heretofore, but, it must be understood for the last time.

Direct the Paymaster-general to pay to the Trustees of the Scotch Episcopal Fund the sum of 1,200 *l.*, and charge the same to Civil Contingencies.

Sir, Edinburgh, 18 August 1856.

Although I have had the honour of interviews with yourself and with the Chancellor of the Exchequer on the subject of the Regium Donum heretofore paid to the bishops and more necessitous of the clergy of the Episcopal Church of Scotland, I have not yet formally acknowledged receipt of your letter of the 26th June, announcing the intention of Government to discontinue the grants after this year.

As the Trustees of the Episcopal Fund, the distributors of this charity, have always considered that this grant rested in equity upon the same footing as those payable to other Nonconformist communions, they cannot be expected to acquiesce in the justice of making our case an exceptional one, and depriving us of the Parliamentary bounty, merely because it was granted out of Civil Contingencies, and voted on when they were submitted to the House of Commons. But, however Government may settle the point, they are confident that no Episcopalian would wish any of the grants to be withdrawn from other religious bodies, merely because their clergy have had a scanty measure of liberality meted out to them.

As the Trustees have the best means of knowing the poverty of the clergy, they very earnestly beg to press on the Government that the biennial payment should be continued during the lives of the present beneficiaries, according to the precedent followed in the case of the clergy of the North American provinces. A sudden withdrawal of the grants will operate severely on the clergy, as they confidently looked to the continuance of this payment, having been made aware of the friendly feelings of the Governments of Sir Robert Peel and of the Earl of Aberdeen.

Before concluding, I wish to direct your attention and that of the Government to the restrictions which still affect the status of our clergy. You are aware that after the suppression of the movement in 1745, in which undoubtedly many Episcopalians

Episcopalians participated, though the Church, as a Church, took no part therein, an Act was passed (19 Geo. 2, c. 38), and made more stringent two years afterwards by another (21 Geo. 2, c. 34), whereby an attempt was made to destroy the Episcopal Church by providing that no orders by any other than an English or Irish bishop should be valid, and that if any clergyman should offend against the Act by officiating to more than the family of which he was master, he should be liable to imprisonment, and for a second offence to transportation beyond seas. Under the influence of this severe legislation the Church languished, till by the Relief Act (32 Geo. 3, c. 63) toleration was granted. A clause was however introduced, that no minister in the Episcopal Church of Scotland should be capable of holding any benefice or curacy within England, or of officiating in any church within the same, unless ordained by some English or Irish bishop.

This remained the law of the land till, by the late Act of 3 & 4 Vict. c. 33, the latter restriction was removed by the permission granted to any clergyman ordained by a Scotch bishop to officiate in England for two Sundays consecutively, and no more, on receiving a formal license to do so from the bishop of the diocese; but no Scotchman or Englishman ordained by a Scotch bishop can hold any cure of souls in England.

This provision imposes disqualifications on our clergy to which no other class of Her Majesty's subjects is subjected. A Presbyterian, or other dissenting minister, may offer himself for orders to an English bishop, and thereby qualify himself to receive any ecclesiastical preferment in England; and even a Roman Catholic priest in conforming to the Established Church would be received *ad eundem*, his orders being allowed, and would be qualified to receive a charge.

It would compensate in a great measure for the withdrawal of the grant, if Government would receive favourably the introduction of a Bill to abolish the disabilities, which are very capricious in their character, as under the Act 32 Geo. 3, c. 63, they do not extend to Ireland, though they do to some of the colonies and foreign places. An instance lately occurred, where the Society for the Propagation of the Gospel proposed to send an eminently qualified Scotch Episcopal clergyman to minister to the sailors visiting Constantinople, but it was discovered that marriages celebrated by him would not have been valid. Moreover, it appears that colonial clergymen are debarred from serving in our own unendowed Church, unless they expose themselves to heavy penalties. Should Government be disposed to release the Church from the unjust restrictions which weigh upon it, those Acts relating to the powers of colonial bishops would require to be narrowly examined.

When an individual, with money in his pocket, applies for an Act of Parliament to relieve him, there seems to be no difficulty in obtaining it, if he choose to expend between 200 *l.* and 300 *l.* The Shipton Act, qualifying Mr. Shipton to hold a living in England, has recently received the Royal Assent, but few, indeed, of our clergy possess 200 *l.*

The Trustees of the Episcopal Fund have authorised me to request you to bring under the notice of Lord Palmerston the present position of our Church; and they rest with confidence on his Lordship's countenance, since the Chancellor of the Exchequer, in a late conversation in the House of Commons on the subject of the disabilities, expressed himself in favour of their removal.

I have, &c.

James Wilson, Esq., M.P. (signed) *W. Forbes.*
&c. &c.

Copy of Treasury Minute, dated 12 September 1856.

Write to Mr. Forbes, that any Bill, introduced into Parliament with a view to remove the restrictions which at present attach to Episcopalian ministers in Scotland, will have the best consideration of Her Majesty's Government.

Treasury Chambers, 16 February 1857. *James Wilson.*

FISHERY BOARD (SCOTLAND).

RETURN to an Order of the Honourable The House of Commons, dated 13 February 1857;—*for*,

COPY "of any REPORTS addressed to the Lords Commissioners of Her Majesty's Treasury in 1856, or the present Year, on the Subject of the FISHERY BOARD of *Scotland*."

Treasury Chambers,
23 February 1857.

JAMES WILSON.

REPORT of *Bonamy Price* and *Frederick St. John*, Esqrs., to the SECRETARY of the TREASURY, &c.

Sir, London, 4 November 1856.

IN obedience to the wishes of the Lords Commissioners of Her Majesty's Treasury, that we should "visit Scotland, and examine, on the spot, into all the questions in relation to the application of the grants to the Board of Fisheries, and report as to what fee should be charged for the brand of herrings cured, in the event of its being determined to continue the system of branding, and also in what manner the other duties of the Board shall be discharged," we proceeded to Edinburgh, in June last, and at once commenced our inquiry, with the active co-operation of the Board of Fisheries and its officers.

Beginning with Burnmouth, we first of all prosecuted our inquiries along the south side of the Firth of Forth, as far as Newhaven.

We next travelled on to Orkney, and starting from that point, visited all the chief fishery stations and harbours, and not a few of the minor ones along the east coast of Scotland down to the Firth of Forth. In a similar manner, we proceeded up the west coast, as far as Stonoway, in the Lewes, whence we returned through Inverness to Edinburgh.

Throughout the whole of this inquiry we received the fullest assistance from the Board of Fisheries and its staff; all the information which they possessed, and all their documents, were placed, without reserve, at our disposal; and our warmest acknowledgments are due to their secretary, Mr. Primrose, for the untiring zeal which he brought to our help, and the distinguished fairness and candour which characterized all his communications with us.

Before proceeding to discuss the first of the principal divisions of the subject of our inquiry, the branding of herrings, we must venture to trouble their Lordships with a brief sketch of the method of curing under the brand.

Many of the statements urged in opposition to or support of the brand, turn on the details of the process of cure, and it will be scarcely possible for their Lordships to understand the bearing of these statements, or to estimate the weight to which the respective arguments are entitled, unless they are fully acquainted with the method adopted by Scotch curers, and the part played by the officers of the Fishery Board.

It may not be needless to premise that herrings are caught by a drift net, not uncommonly one mile and a quarter long, which is hung as a curtain perpendicularly in the sea by ropes attached to buoys. These ropes are made longer or shorter, according to the depth to which it is desired to sink the net. The herrings as they swim, strike against the wall, so to say, of net, and catch themselves by their gills in the meshes.

We cannot explain the cure of herrings more concisely, than by repeating here the quotation made by Mr. Lefevre, from an essay published by Mr. Mitchell, the Belgian Consul at Leith, in the Quarterly Journal of Agriculture in Edinburgh, in June 1839.

"The herrings being brought in the boats alongside the quay, or near the "curing place, are lifted with wooden shovels into a wooden measure without a "bottom, called a cran (which measure is branded by the fishery officer, and

" must contain 36 gallons). The cran is previously placed on the cart or place " where the herrings are to be delivered, and, upon lifting up the measure, the " same having no bottom, the herrings are thereby emptied out of it without " the trouble of tumbling them out, as would have to be the case if it had a " bottom. The herrings are then conveyed to the curing yard or shed, and are " placed in square pits or in heaps ; they are then gutted (almost always now in " Scotland with a knife) by taking out the gills and stomach, and those who " cure in imitation of the Dutch leave the *appendices cæci*, or crown gut, as it is " considered to impart a richer flavour to the herrings ; they are then roosed " (sprinkled with salt) and thereafter those employed in packing put a quantity " of salt in the bottom of the barrel, and a layer of herrings is then closely " laid together on their sides (if in imitation of the Dutch, nearly on their " backs), and alternately a portion of salt and a layer of herrings until the barrel " is properly packed."

" After remaining three or five days the barrel is again opened, when the " herrings are found floating in pickle, the superabundant pickle is poured off, " and an additional quantity of herrings to fill up the cask is packed in ; a " quantity of salt is then laid on the top of all, and the barrel is headed up, and " it is then ready for branding."

" Each herring barrel must not be smaller in capacity than 32 gallons, old " wine measure, or 27 imperial gallons, and half barrels may be used if of a " proper size."

Before a cask of herrings can be entitled to the Crown brand they must have been packed in the barrel within 24 hours from the time when the nets were hauled out of the sea, and they must be 10 days in the cask before it is finally filled up and prepared for exportation.

It is important to add, that a considerable proportion of the herrings are not cured in yards or under sheds, but in square wooden pits on the open quay.

The size of all herring barrels, whether intended for the brand or not, and the kinds of wood of which they may be constructed, are prescribed by law, and the fishery officers are legally empowered to claim free access to all premises in which herring barrels are made.

The officers during the fishing season constantly move about amongst the curing establishments, whether on the quay, or in private yards, observing the amount and the quality of the fish as they arrive in the boats, circulating among the women and coopers, watching the cure as it proceeds, frequently offering advice and instruction, and, as they allege, gathering hints as to the greater or less degree of strictness with which they shall carry out the inspection of the barrels when they are presented for branding.

Before applying the brand the officer invariably inspects the quality and condition of the herrings by opening a portion of the barrels, and taking out several tiers of the herrings from the top or bottom of the casks. The regulations of the Board lay down the rule that one barrel in 10 shall be opened, and this is held to be satisfactory by the trade ; but frequently a larger or smaller number of barrels is examined, according as the officer may have ground for distrust or confidence.

The object of this inspection is to secure a proper condition of pickle, and a careful selection of fish, so that spent fish, which have shot their spawn, shall be effectually excluded from the Crown full brand, and broken or improper fish, from both that and the Crown brand. The Crown full brand is applied to barrels containing full fish only, that is, fish full of milt or roe ; the Crown brand to casks filled with spent fish, which have shot their spawn. Herrings, under the Crown brand, sell in Germany for abour 5*s*. less per barrel than those marked with the Crown full brand.

It is desirable to add an explanation of the Dutch cure, in order to illustrate its essential difference from that of the Scotch, the more especially as unwarranted inferences, very prejudicial to the reputation of the Scotch curers, are frequently drawn from a comparison of their method with that adopted by the Dutch.

The Dutch fishing of herrings is carried on in flat-bottom vessels, without the agency of boats, in the open sea ; as soon as the herring is hauled over the side of the vessel, it is immediately gutted, whilst the blood still flows readily from the blood vessel in the back bone ; it is then consigned to the barrel in the early morning, whilst still fresh and uninjured, and the shaking of the pickle

by

by the rolling of the vessel completes the cure. Such a method of fishing is of necessity costly, but the fish is peculiarly white, and its quality of the first order.

The Scotch herrings, on the other hand, are caught by boats in enormous masses, at considerable distances from the shore, and are often rowed to the quay, during several hours under a broiling sun, piled up in vast heaps at the bottom of the boats. We have ourselves seen 80 crans, or upwards of 90,000 herrings, arriving in one boat, under the burning heat of an August morning, shovelled into baskets, and then conveyed in carts late in the morning to the station of the impatient curer. If the general catch is large, the herrings must be again heaped up in the curing pits, whilst the congealed blood, now incapable of flowing at the gutting, blackens the back bone, and ultimately the fish itself.

It is obvious that herrings cured by processes so dissimilar constitute two essentially distinct articles of trade; that the merits of one class are unattainable by the other, and that the Scotchman can find in cheapness alone, combined with sufficient goodness of quality, compensation for the loss of an excellence which it is impossible for him to reach.

In the following statement, the expression "early unbranded herrings" will frequently occur. It will designate herrings taken in the early part of the season, before the large catches come in, and despatched at once to Germany, where early herrings command high prices, like early fruit or vegetables. Many of these herrings, however, belong to the commencement of the full season, and are regularly cured for the brand, but are hurried off before the required delay of 10 days has expired, either to complete a cargo or to catch good prices abroad before the full supply of herrings arrives in the market.

The following TABLE, extracted from the Report of the Board of Fisheries for 1855, exhibits the progress and present state of the herring trade in cured herrings :—

PERIODS.	Total Quantity of Herrings Cured.			Total Quantity of Herrings Branded.	Total Quantity of Herrings Exported.			Grand Total Exported.
	Gutted.	Ungutted, including Bulk.	Total Cured.		To Ireland.	To the Continent.	To Places out of Europe.	
Year ended 5 April 1840	405,379½	138,565½	543,945	152,231	157,359	82,515½	12,647½	252,522
Year ended 5 April 1841	431,157	126,105¼	557,262¼	154,189	150,517½	90,951½	8,668	250,137
Year ended 5 April 1842	489,620½	177,624¾	667,245¼	190,922½	187,953	91,069½	5,713½	284,736
Year ended 5 April 1843	442,290	181,129¾	623,419¾	162,713	165,327½	120,136½	6,336½	291,800½
Year ended 8 April 1844	473,556¾	191,803	665,359¾	182,988	127,770	181,953	3,793½	313,516½
Period extending from 5 Jan. 1844 to 5 Jan. 1845	393,312	132,720¾	526,032¾	140,632	120,293	143,754	2,326½	266,373½
Year ended 5 Jan. 1846	411,271	121,375	532,646	142,473½	127,027½	113,678	2,488½	234,194
Year ended 5 Jan. 1847	414,915¼	192,535¾	607,451	156,278½	102,585	148,363½	4,765½	255,714
Year ended 5 Jan. 1848	372,989½	189,754	562,743½	146,400½	102,690	142,532	4,959	250,181
Year ended 5 Jan. 1849	392,827	251,541¼	644,368¼	153,944	78,262½	168,049	3,682½	249,994
Year ended 5 Jan. 1850	507,024½	263,673¾	770,698¼	213,286½	78,889¾	257,108	4,258½	340,256¼
Year ended 5 Jan. 1851, for Scotland and the Isle of Man only	378,187	165,822½	544,009½	172,924½	66,138	198,403	2,367	266,908
Year ended 5 Jan. 1852, for ditto - ditto	417,233¼	176,797¾	594,031	201,636½	81,340½	182,659	205	264,204½
Year ended 31 Dec. 1852, for ditto - ditto	375,693	123,094½	498,787½	169,159½	60,414	221,979	1,133	283,526
Year ended 31 Dec. 1853, for ditto - ditto	560,367	217,672¾	778,039¾	248,136½	95,339	242,853½	4,438½	342,630¾
Year ended 31 Dec. 1854, for ditto - ditto	458,579½	177,982¾	636,562¼	211,844	121,833⅓	237,893½	1,919½	361,696¾
Year ended 31 Dec. 1855, for ditto - ditto	582,715¼	183,988¼	766,203½	280,581½	97,377	344,029	858	442,264

These figures show,—

1. The great and increasing prosperity of the trade in white herrings. The herrings cured have increased from 543,945 barrels in 1840, to 766,203 in 1855, and the exports from 252,522 to 442,264 barrels.

2. A largely increased use of the brand, the quantity branded having expanded from 152,231 barrels in 1840, to 280,581 in 1855, the largest on record.

To the 766,203 barrels cured must be added
130,259 caught, but not curred, giving

897,462 - barrels as the total produce of the Herring Fisheries for 1855.

The value of this produce is reckoned by the Board to have exceeded a million of pounds sterling.

The capital embarked in this trade is computed at 2,700,000 *l.*, and it is supposed to give subsistence to 70,000 persons. With reference to the largest cure known in the trade, 770,698 barrels in 1849, we subjoin an extract from the Board's Report for 1855, which we found fully established by the evidence we received :—

" That so large an export has not arisen from a redundancy of produce, but " from our herrings attaining a better position in the foreign markets, is shown " by the ready sales effected there at high prices, in striking contrast with the " immense fishing of 1849, when the redundancy was so great that, in the state " of the markets at that period, the export to the Continent was carried to " excess, and every market glutted with Scotch herrings ; yet the total export " to the Continent of that year was only 257,108 barrels, being 86,921 barrels " less than 1855, while the gross cure of the two years was nearly equal to that " of 1849, being 770,698 barrels, and that of 1855, 766,703 barrels. But the " contrast does not stop here, for while the greatness of the export in 1849 was " an evidence of the weak condition of the trade, and of the sacrifices made, " fish being pressed on to the Continent to sell at most ruinously low prices, as " they were not saleable elsewhere, the export of 1855, though still greater, was " a sound and sure trade, springing, not from forced exports, but from a healthy " and continual demand, and without a symptom of a glut at any time, although " the fishing was an unusually heavy one."

In 1855 there were 7,323 boats of the first and second class, besides 4,424 of the third class employed in the shore curing department of the fisheries ; assuming that the two first classes alone were engaged in catching herrings, and that the number of men per boat averages rather more than four, we obtain a result of about 30,000 men, besides a large number of persons employed as coopers, gutters, packers, &c.

The 1,050 boats, with their nets, which fished in the Wick district alone this season cannot be valued at less than 250,000 *l.*

With respect to the expediency of continuing the system of branding now carried out by the Board of Fisheries, on a self-supporting basis, or abolishing it altogether, we examined a large number of witnesses connected with the herring trade, as merchants or curers, as well as many of the fishery officers. Wherever we found different opinions prevailing, we requested the traders themselve to select witnesses of each opinion to represent it before us. Our examinations were private ; for obviously no merchant or trader would have described the details of his private business before the world, amidst the comments and contradictions of trading rivals, and in that case the evidence taken by the Commission would have been limited to general statements of opinion, without that illustration of minute facts which alone could give us an insight into the real nature of the herring trade.

We will now endeavour to sum up the arguments advanced by the opponents and the advocates of the system of branding carried out by the Board of Fisheries.

1. The opponents of the brand, whilst they admit that the Board of Fisheries has deserved well of Scotland, by developing the trade in white herrings, nevertheless affirm that the time has now come when that trade can stand of itself, and can dispense with the artificial support of the brand.

2. They complain that in the foreign market all branded fish alike obtain the same price, although distinguished from each other by wide differences of intrinsic value, extending sometimes to 3 *s.* a barrel, and that thereby a real wrong

wrong is inflicted on the superior curer, who is deprived of his reward by the equalizing action of the brand.

3. They contend that the tendency of the brand, which places all curers on the same level of price, is to arrest improvement by destroying the motive to exertion, and they point to the fact that no improvement has taken place in the cure of white herrings for many years past. They instance the use of covered sheds as an improvement discouraged by the equalizing influence of the brand.

4. It is a mistake, they say, to suppose that the German consumers are blindly attached to the brand, for they are always eager buyers of early unbranded herrings, and frequently give equal, and sometimes in the provinces on the coast, superior prices for unbranded, in competition with branded fish.

Hence they argue that the Germans are unwisely and needlessly taught by our own institution to lean on the brand, instead of regarding the quality of the article.

5. They further contend, that the private brands of skilful curers would speedily give the same confidence to purchasers as is now given by the official brand; that a trade conducted by private brands would stimulate curers to exert themselves to acquire a high character by good curing; and that such a trade would regulate itself by the desire to please its customers, and so would contain within itself the principle of constant expansion.

6. They show that the brand is neither needed nor used in the home markets, thus demonstrating the absence of any such peculiarity in the herring trade as should require a Government machinery not wanted in other trades.

7. They say, that under the system of the Board, inspection at the time of branding is the sole test on which the officers rely for guaranteeing the quality of the herrings, it being notorious that they are in the daily habit of branding fish, especially at remote places, about which they know nothing except what they learn on examination. A similar inspection by the skilful agents of foreign purchasers would, they contend, make an equally good selection of herrings, and warrant an equal amount of confidence in the buyer.

8. They appeal to the success of the red herring, the cod, the salt beef, and other trades, as proving the uselessness of the brand.

9. They represent that the brand, though nominally optional, is really compulsory; unbranded herrings, though of good quality, fetching inferior prices abroad in the same market with branded; and that thereby an unjustifiable hardship is imposed on the abolitionist—often the most meritorous curer—who is coerced by the interference of Government into using a brand which he thinks not only useless, but positively injurious to his trade.

10. They explain the support which the brand receives, especially from large curers, by the facilities which its officers render them in the prosecution of their business. These officers they represent to be unpaid substitutes for foremen, provided by the Government. The large curers, they assert, are able, by the superintendence of the officers, to have establishments at many remote stations at no cost to themselves. Hence their zeal on behalf of the brand.

11. Lastly, they declare that it is an absurdity to suppose that when consumers are desirous of purchasing, and are able to pay for a commodity, the unassisted efforts of traders are incapable of maintaining a vigorous trade.

On the other hand, the advocates of the brand—

1. Appeal to a vast and flourishing trade, developed and extended under the brand, against the active competition of rivals who were formerly established in the foreign market. Why disturb, they ask, without some overwhelming necessity, for the sake of abstract doctrines, an industry involving so much property and the welfare of such an immense population?

2. They affirm that the brand confers benefits of the highest value on the herring trade. It furnishes to the foreign buyer a large export of herrings, which give entire satisfaction to the consumers. The rapid extension of the trade, driving its competitors out of the market, proves that this satisfaction proceeds, not from an indolent contentment with a low standard of cure, but

from a well tried experience that Scotch herrings present a perfect combination of goodness with cheapness.

3. It guards effectually against numerous frauds and carelessnesses, of which the herring trade is peculiarly susceptible, and which might not only prevent its extension to new markets, but might also disgust present customers and drive them over to rivals.

4. It furnishes valuable facilities for commerce, by providing a guarantee for the quality of the goods between buyer and seller on the authority of a neutral and official person; thereby preventing the disputes, litigation, and sacrifices inevitably incident to merchandize liable to gluts, incapable of uniform quality, open to injury on examination, and easy of repudiation after purchase.

5. It is an effective instrument, they show, for the easy circulation of herrings into the interior of the Continent. On the faith of this official warranty, barrels of herrings pass unchallenged, with little or no opening of the barrels, to the inland consumer, and so escape injury, delay, and the risk of being thrown back on the seller. The certainty that the quality of the herrings may be thoroughly relied on enables the Scotch or German merchants to consign to, or execute orders from, the most distant countries with complete confidence and safety, insomuch that bills of lading are bought and sold many times over before the herrings reach the consumer, and advances are commonly made upon them to shippers.

6. The confidence and facilities created by the brand have substituted in the place of consignments for account of Scotch curers purchases made on the spot in Scotland by German houses of high standing, to the great advantage of every Scotchman connected with the trade.

They contend that a machinery imparting such facilities to commerce, if purchased by no counterbalancing disadvantages, ought not to be abandoned, except upon the most clear and cogent motives of necessity.

7. They repel the analogy of the salted beef and cod trades.

The salting of beef, they explain, is a regular process, carried on by an establishment uniformly fed with the raw material, with a supply of labour duly proportioned to constant and methodical work. Barrels of beef, moreover, are not injured by being opened for examination; the beef can be taken out of the cask and replaced without harm; the herring trade, on the contrary, is peculiarly irregular; it is the produce of a fishing of eight weeks, or rather of a few days during that period, in which the fish are caught in enormous quantities.* Hence, they say, it is impossible for curers to keep up such a staff of labourers for so many weeks as shall be equal to the most careful preparation of an immense catch on a single day; the temptation, therefore, at times, to haste and carelessness is extreme. Nothing, they urge, but the dread of a public officer, the disgrace of whose censure is more feared than the dismissal of an employer by a population naturally disposed to reverence official authority, could enforce on a multitude of women the necessary care in gutting and packing the fish.

Similarly they reply that the cod never overwhelms curers with numbers, and that it can be, and is handled singly; that it sustains no injury by being taken out of the cask, and is consequently easy of inspection.

8. They describe the home trade in cured herrings as being of an essentially different nature from the foreign. Few white herrings go to England; Scotland consumes more, but for the most part such as are lightly salted for immediate use. The greater part of the cured trade with both these markets is in red herrings, which being dry, can be inspected without injury. A large quantity of white herrings is exported annually to Ireland, but the trade with that and the other home markets they assert to be a retail trade, whereas the exportation of herrings to the Continent is conducted by wholesale merchants, who send large parcels into the interior of Germany, and who represent the brand to be extremely useful to their business.

They

* The amount of the daily take of herrings at Wick for the seasons of 1855 and 1856, inserted in the Appendix, will show in how few days the bulk of the fish is caught during a period of twelve weeks.

They add that the chief exporters of white herrings to Ireland have establishments of their own in that country, in which the barrels are opened and refilled, and then sold by retail to consumers.

They affirm, moreover, that shippers for the home markets frequently encounter disputes as to the quality of the herrings sent, and are often obliged either to take them back, or to submit to heavy deductions from the stipulated price, rather than have recourse to law. Several such cases were mentioned to us by the witnesses.

10. In reply to the assaults of the abolitionists, it is contended that if it is true that the great curer has been hitherto provided, without expense, with a Government official for foreman, he will have to pay for this advantage henceforward, and that the services rendered by the fishery officers to the great curer, if not obtained at the public expense, are a benefit to Scotland as well as to him, by enabling him to lay out his capital successfully at various remote stations, and so to give employment to numerous fishermen and poor people.

But they represent that the small curer is much more benefited by the brand than the great one.

By means of the brand the small and obscure curer assumes an equally high position with the curer of wide fame. This great advantage, they represent, is not obtained by the small curer upon the objectionable principle of getting by means of the brand the same price for inferior herrings as for good ones, but is a legitimate and fairly-earned equality, inasmuch as his herrings, in quality and goodness, are on a par with the products of the capitalist. The examination for the brand first compels the poor man to reach the same standard of cure as the rich one, and then prevents his want of reputation from entailing the loss of a price to which he is entitled. To enable poor men to compete successfully, both in cure and price, with capitalists, they conceive to be a benefit far greater than any derived by the large curers from the indirect influence of the officers over their workpeople. That influence is exercised over all curers alike, and is a common benefit to all; but the small curer owes his very existence to the brand. They urge, therefore, that if any one is entitled to complain it is the capitalist, whose reputation and resources would enable him at once to seize the market, but upon whom the brand brings down a host of small and upstart rivals. To explain the warm support which these great men give to the brand by the pecuniary saving they effect by means of the officers is to convict them of a gross and absurd miscalculation; for if the official stamp which gives a ready sale to the small men's herrings were withdrawn, the commanding position of their own private brands and the annihilation of their competitors would completely render them masters of the trade.

11. They deny that the standard of cure is reduced to the level of the inferior skill of the inexperienced man; no curer, great or small, lays claim to any secret knowledge or peculiar skill. They maintain that the cure of herrings is not a matter of science, but of care and attention. Barrels of good wood, the earliest possible handling of the fish, great care in gutting, strict attention in selecting uniform, and rejecting broken and improper fish, are the decisive elements of a superior cure. Covered sheds, they admit, are useful, but not so useful as to make any important difference in the quality of the cure. They strongly insist also, that no man under the brand can be careless with impunity. In a full or falling market (contingencies always possible) such a curer would sustain a certain, possibly, a severe loss.

12. To the charge, that progress is arrested, they oppose the success of Mr. Biggar, who won this great foreign trade for Scotland under the brand, and who was, whilst a curer, and is still, in his retirement, a strenuous defender of the brand. He studied in Germany the defects charged against Scotch herrings. He pointed out to the Board, that full and spent fish were mixed up together in the same barrels; that broken herrings were found among them; that the fish were packed flat upon their sides, which gave them a lean appearance, and that the barrels were slackly filled, and irregularly salted. He corrected these defects in his own cure, and then his improvement was adopted by the Board. This was the famous "Banff" cure. What Mr. Biggar did, others may do again now. The objection, that they lack motive, they assert to be unfounded; for the Germans are large buyers of early unbranded fish, before the arrival of the

branded; an improved cure, therefore, applied to these would at once be appreciated, and there would be no branded barrels in the market to prevent it from obtaining that better price which was its due.

13. It is further argued that no real wrong is done to the curer, who cannot get a higher price for a superior parcel of fish; for his claim to a higher reward does not rest, they affirm, on merit, but on accident—a small catch—an early return of the boats to shore, cool weather, or other favours of fortune. These accidents happen to all alike. The man whose boats bring him 2,000 herrings each, of necessity produces a finer parcel than another, who, on the same day, is overwhelmed by boats with 90,000 in each. Every man is a good or bad curer by turns, and every man, by turns, finds, in the successful sale of his second-rate fish, compensation for any extra price which he has lost on his prime parcels.

14. They admit freely, that the inspection of a good judge could ascertain generally for a buyer the quality of herrings as satisfactorily as the brand; but it is contended that the two kinds of inspection produce very different effects.

Private inspection detects good fish, but it does not prevent the presence in the market of much that is bad. The officers, on the contrary, at the stations where they are present, watch over the arrival of the boats, and note the condition of the fish; they move about among the gutters and packers; they show themselves unexpectedly at every station of their district; their eye is felt to be ever present; and care and attention are the results: hence a much larger quantity of well prepared fish.

Private inspection, moreover, is too expensive to be carried out anywhere, except at the great central marts. Purchasers would supply their wants in these ports first, and curers at the small creeks would be able to sell only after their large neighbours, or, if the demand was slack, could find no sale at all. On them pre-eminently the risks and losses of a most fluctuating trade would be made to fall. The brand, they assert, rescues them from this unequal position. Orders are as freely given to them now as to the large ports, for buyers are ready to purchase anywhere, provided only that the fish can pass the examination of the officers, and be branded. Without the brand, the curers at the small creeks would be forced either to send their barrels to the great stations at their own cost and with the constant risk of rejection, or else to consign abroad on their own account. The probable end would be that the small ports would fall into the hands of the agents of large capitalists.

There would be great danger, they add, of the frequent and injurious opening of barrels by purchasers without a sale being effected, whilst one inspection now by the officers suffices.

As to inspection in Germany, it is pronounced to be simply ruinous, and to have been found such by experience. There are no good coopers there; the proper pickle for re-filling, preserved in Scotland from the overflowing of the barrel during the first few days, is not to be had. The presence of the owner and his people is everything; commission agents having been found to be poor protectors against rejection by purchasers on trivial pretences, and vexatious discounts for alleged defects.

15. They have to deal, too, they say, with a people with whom the stamp of a Government officer carries peculiar weight, who are accustomed to buy crown timber, crown staves, crown hemp, and the like, and whom it would take long to persuade to place the same trust in private marks.

16. Lastly, it is denied that any hardship is inflicted on the abolitionist by his being compelled to use the Crown brand against his inclination. It is not the English Government, but the foreign customer who forces him to use the brand, and if no harm to the trade is shown to result, why should not the wishes, or even prejudices, of customers be consulted? If Scotland is not injured, why refuse to gratify the German's whim, if so it must be called, on the plea that his ideas are old-fashioned, and that it would be better for him to exercise his intelligence in discriminating between the qualities of merchandize.

Before reviewing the statements advanced on both sides of this argument, it is necessary to state a fact of the utmost importance to this inquiry.

No witnesses have asserted that the branding system of the Board of Fisheries is absolutely indispensable, either to the existence or the prosperity of the herring

herring trade. No witness when questioned failed to express a perfect confidence that whatever might be the duration and the amount of the disorder or loss caused by the abolition of the brand, the foreign trade would ultimately be as flourishing as ever. This universal opinion furnishes a gratifying proof of the solid position which the Scotch white herring trade is felt to have attained, and it is satisfactory to us be able to assure the Lords of the Treasury, on the authority of this unanimous evidence, that in dealing with the brand they have to consider only the relative advantages of a new system, compared with the amount of temporary confusion or suffering by which they must be purchased.

The confidence thus universally entertained seems to us to be well founded. When all other trades thrive without the authentication of the quality of goods by a Government authority, it is impossible to believe that the white herring trade alone cannot dispense with such external aid. The energy of private enterprise which surmounts obstacles in other branches of British commerce will assuredly triumph in this also.

Many facts in the present state of the herring trade confirm this expectation. The markets of Scotland and Ireland flourish without the brand. The trade in pilchards, a fish closely resembling the herring, and which is also exported to foreign countries, has not been injured by the want of a public brand. In Germany, early fish are readily sold without the brand. On the German coasts, the unbranded fish of known curers compete successfully with the branded. When markets are full, the Germans notice quality, and prefer the barrels of superior cure. Moreover, the abolition of the official brand would rescue from an unjust depreciation those portions of the unbranded exports which are equal in goodness of cure to the branded. The Germans are fully aware that large quantities of inferior fish, which could not pass the inspection for the brand, are exported in an unbranded state, to be disposed of at lower rates. Hence there arises a general prejudice against all unbranded barrels, which of course would disappear when none but unbranded could be obtained.

These facts and reasonings convince us that the traders in white herrings are justified in believing that the foreign trade would sustain no permanent injury from the abolition of the brand, and they warrant us, we conceive, in expressing a decided opinion, that if the continuance of the brand involved the violation of any great principle of public policy, we should be bound to recommend its abolition to their Lordships.

Such a violation we should have found in its further maintenance out of the national revenue. We see nothing, either in the actual position of the herring trade, or in the risks of a transitional state, which would justify a claim for an exceptional contribution from the public purse to the support of a particular trade. It would be manifestly against every principle of justice to grant to a single trade a permanent stipend out of the national taxes, merely that it might escape the evils of transition to an unassisted state. This objection, however, having been removed by the resolution of my Lords not to propose again to Parliament any estimates for defraying the cost of the branding system out of the national funds, we shall now endeavour to discuss the expediency of continuing the brand on a self-supporting basis, or of abolishing it altogether.

The first argument pleaded by the defenders of the brand states, we conceive, the real issue to be tried. We have to deal with an established and flourishing trade. It employs an immense capital, draws out of the sea a large proportion of the revenue of Scotland,* and is the chief means of subsistence for a considerable part of the population of that kingdom. Still more, it exhibits those signs of healthy life for which the invigorating impulses of competition are sought and valued. It is progressive. It grapples with formidable rivals, and conquers them. Since 1848 the quantity of herrings imported from Great Britain

* The Memorial of the Convention of the Royal Burghs states that the value of the cured fish exported for the last ten years from Wick and Lybster, in the county of Caithness, gives an annual average of not less than 130,000*l.*, whereas the annual value of the whole land in the county was returned in the year 1843 at 66,000*l.*

Britain into the ports of Stettin, Königsberg, Hamburg, Dantzic, and Harburg, has increased from 100,297 to 318,263 barrels in 1855, whilst the Dutch imports into the same places has declined from 5,019 to 1,300 barrels, and the Norwegian from 194,862 to 122,423 barrels.*

Is it politic, then, to disturb such an organization? Can an adequate motive be alleged strong enough to call for and justify interference? Is it desirable to destroy, in exchange for another, a machinery which is certainly the concomitant, but which is also represented by a majority of those who carry on the trade, to be an efficient instrument of its prosperity? Such we consider to be the practical question to which we are required to give an answer.

1. Now it is essential to observe, that the services performed by the branding are necessary for the herring trade, and must, under any system, be accomplished by some machinery or other. Every part of the work done by the fishery officers is not only useful, but indispensable. Gutters and packers must be watched, for a few broken or ill-assorted fish would greatly impair the mercantile value of a barrel of herrings. There must be inspection before purchase. That the fishery officers discharge these duties with admirable judgment, is cheerfully and even gratefully acknowledged by all parties.

2. The result is a fact of great moment; the end aimed at is accomplished; the work is done well and thoroughly. The 280,000 barrels which are cured by so many small people, and packed by such multitudes of poor women, distributed over such endless ports and creeks, are what they profess to be, sound and good herrings. Amidst the many attacks made on the brand, there was no accusation that the vast export which it covered ever deceived the confidence of buyers.†

3. No one further disputes that a trustworthy mark, attesting the quality of merchandize, whether emanating from a public or private authority, is an instrument of trade of the highest value, especially in the herring trade, in which every man alike is eager to reduce examination to a minimum. It is universally admitted that the foreign consumer is satisfied with the warranty of the Fishery Board;—that by the help of the brand, barrels of herrings circulate with little examination throughout the interior of Germany;—and that disputes, litigation, and repudiation are largely prevented by the brand.

4. In the next place, it cannot be said that the abolition of the brand is demanded by public opinion in Scotland. It encounters the active hostility of some portion of the press, but the opinion of the great majority of the traders is loud in its favour. On the west coast, which supplies the home markets, and does not use the brand, there is no marked demand for its removal. Some oppose it both there and elsewhere in Scotland, upon broad principles of political economy, but the general, though we admit not universal sentiment, is neutrality.

We have perceived traces of opposition to the brand having proceeded from a desire to obtain for harbours the sum hitherto expended on the maintenance of the branding establishment, and there is reason for supposing that other motives,

---

* *See* Mr. Wellman's Table in the Appendix.

† Since writing the Report, we have met with a remarkable document, complaining of the existence in the greatest export trade in the world, the cotton trade, of the very evils which are remedied in the herring trade by the Government brand. Mr. Sellar, President of the American Chamber of Commerce at Liverpool, and Mr. Haigh, President of the Cotton Brokers' Association, in a public letter addressed to several Chambers of Commerce in America, and to "all concerned in the cotton trade of the United States," dated October 23, give a description of the mischief and loss caused by irregular packing, which might almost seem to have been dictated by German buyers of Scotch herrings. They recite many of the statements made to us by the supporters of the brand. We insert their letter in the Appendix, as well worthy of careful perusal. It points out the striking analogy which exists between the cotton and herring trades; and still more, it proves conclusively that the dangers which the brand is designed to meet are not peculiar to the herring trade, but constantly threaten to break out in every trade carried on under similar circumstances. This letter should be weighed in combination with the fact, that barrels of herrings branded by the fishery officers are never complained of.

motives, foreign to the question of the real worth of the brand, have actuated some of the assaults made upon it.

These considerations, especially the real and great services actually accomplished by the brand, impressed us with the conviction that the expediency of abolishing or retaining it depended practically on the injury which, by positive infliction or by the prevention of improvement, it could or could not be shown to bring upon the trade.

We felt the greatest anxiety to determine this point as carefully as we were able, and to learn whether the brand could be justly charged with impeding progress, and what were the improvements of which the cure of herrings, in the judgment of men of ability and experience, was susceptible, but which were prevented from being carried out by the mischievous action of the brand.

Fortunately, we could appeal to the sentence of a judge whose impartiality was above suspicion, and whose knowledge and experience conferred the highest authority on his decision. The west coast of Scotland carries on a large trade in herrings, both fresh and cured, for which the brand is neither used nor valued. Its curers live under the stimulating influence of free competition. They encounter no branded barrels to prevent them from reaping the full reward of improvement, and are acted upon, therefore, by every motive to exertion.

Yet the curers of the west coast declare,—

1. That the cure on the east coast is equal to their own, and is unassailable on the ground of backwardness in improving.

2. That their own highest efforts are directed to carrying out for white herrings the cure prescribed by the regulations of the Board.

3. And that the inequalities observable in the branded fish are inevitable, being the results, not of negligent or inferior cure, but of the natural variations in the quality of the fish, and the circumstances under which they are caught, adding pointedly that the cure of herrings is conducted on the east coast fully as well as the circumstances of each day will allow.

We conceive that this testimony, supported by the evidence collected elsewhere, determines the cardinal points, that no low level of minimum cure can be charged against the brand, that no general improvement of cure has been prevented by it, and that consequently there is no ground for expecting that its abolition would be followed by a better cure of the 280,000 barrels exported to Germany, taken as a whole, or would bring back to Scotland a larger aggregate amount of money for them.

4. It also disposes of the objection, that the brand commits wrong by equalising prices. It confirms the allegation of the advocates of the brand, that the superiority of a few parcels depends on the accidents of particular days, which, befalling every curer in turn, furnish no ground of complaint to any single one that his skill and exertions are unrewarded.

5. The same negation of a meritorious superiority meets the further objection that the interference of Government is made the instrument of depriving the improving curer of that higher price, which without it he would be sure to realise. A greater or smaller amount of care and attention seem to be the limits within which good and bad curing range. Who is, therefore, wronged, or who can reasonably complain, if the Government indirectly enforces care and attention upon all? This does not appear to us to be interference, in the objectionable sense of the term. It is a national benefit that many persons should be enabled to cure well, and to prepare successfully an immense export of thoroughly saleable goods. In the face of such vast interests, and such actual success, we are unable to attach weight to the objection of Government interference, unless it can be shown that this interference prevents science and skill from raising the standard of cure, and increasing the prosperity of the whole trade. Moreover, such interference, when the brand is paid for, would be attended by its antidote; for the foreigner, if he insists on the official brand, will have to pay for branded barrels a price enhanced by at least the cost of the

fee, in the same market which will offer him equally good fish at a lower rate. He will thus have the strongest inducement, and the power to get rid of the interference of Government, if so it must be termed, both for himself and the curer.

Besides, it must not be forgotten that the curer, who has devised a better cure, may apply it at once to his early unbranded fish, and so make it known in Germany. If approved of there, he can easily do what Mr. Biggar did, add his own brand to the Crown brand, and then he will possess the same facilities as he would under the abolition of the brand. No one has ventured to say that the Crown brand would be refused by the Board to a really improved cure, tested by success in Germany; whilst the absence of any such superior cure among the early unbranded fish is a decisive proof that none such is known to any curer.

6. On the subject, however, of modes of cure, we wish to bring one suggestion under the consideration of the Board of Fisheries. The amount of salt prescribed for branded barrels by the regulations of the Board is determined by the requirements of the foreign export trade, and consequently by what is necessary for preserving the fish in good order for a whole year. It appears, however, that a decided preference is given, for immediate consumption, to herrings more lightly salted. If, therefore, the brand succeeds in maintaining itself, it well deserves consideration whether a separate class of branding might not be established for herrings of this description.

7. But even if superior skill and merit existed, it is not the possibility of curing a small quantity of herrings with higher skill, and of getting a larger price for it, which ought to decide so wide an issue as that involved in the brand. The real question is, whether the whole export might be better cured, and a more remunerative return obtained for it, by doing away with the brand, than that which is now realised with its help. If this cannot be rendered probable (and we have heard no evidence to make us think it probable), nothing we conceive is proved by demonstrating that some carefully prepared barrels are worth a better price than the rest of the branded herrings, and do not obtain it. A nice adaptation of reward to varying shades of excellence is a refinement of which great trades are hardly capable. In dealing with large interests, aggregate results, not theoretical accuracies, must be regarded. The Dutch cure is decidedly better than the Scotch, and fetches more money too per barrel; but the Dutch export trade, as a whole, is thoroughly beaten in the competition with the Scotch, and is rapidly declining.

We are thus brought to the conclusion, that there ceases, by the adoption of a self-supporting system, to be any adequate motive for disturbing the existing arrangements, and hazarding, though only for a season, the present prosperity of the foreign export trade of white herrings, by the abolition of the official brand.

There remain some peculiar considerations of great practical weight, which enforce the expediency of retaining the brand.

1. Nothing has been more strongly or more generally insisted on throughout the evidence than the great value of the change, which of late years has brought German buyers to Scotland, and diminished the necessity for sending consignments on Scotch account to Germany. We trust we shall be excused if we dwell a little on this important matter.

These German merchants are gentlemen of high commercial position, and large capital; their means enable them to prevent or lessen gluts abroad, by feeding the market regularly, or by holding on their herrings till better prices return. They do not hesitate to make large contracts for the purchase of herrings whilst the fish are still swimming in the sea, on the sole condition that they shall be branded, and it often happens that they are compelled to buy largely of the remainder of the season's catch, to prevent the market abroad from being ruined by the forced sales of later shipments. Not unfrequently they advance capital upon these contracts to the curers, who in their turn find a safe basis in the stipulated purchases for making engagements with the fishermen for boats.

The

The fishermen are great gainers by this system, for the curers, having contracted to deliver to the merchants large quantities of herrings, are eager to engage boats, and run up the price to be paid to the fishermen per cran of fresh fish by keen competition with one another.

We found at Wick a remarkable illustration of this system: we were informed that from 70,000 to 90,000 barrels had been bought, and in part paid for before the fishing had commenced, at prices varying from 23*s.* 6*d.* to 24*s.* 6*d.* per barrel. On the other hand, curers had generally engaged boats at 16*s.* per cran (about 5 per cent. more than a barrel of cured fish, after deducting broken fish), with 5*l.* bounty for the season, and fishermen were standing out for 18*s.* The barrel, packing, &c., are computed to amount to 6*s.* 6*d.*, thus leaving but a very narrow margin of profit to the curer; he finds, however, in the certainty of that profit compensation for the chance of increased gain on consignment.

On the other hand, the system of consignments brought many small and needy sellers as rivals into the same market abroad, ruining each other in the natural gluts of large catches, creating artificial gluts by their impatience to effect sales, and exposing themselves to numerous charges and vexations.

The fisherman's position under this system was very different from what it is with the contracts; the curers not having sold their fish beforehand were under no pressure to engage boats, and in settling with the fishermen the price of the cran, they reserved a large margin wherewith to protect themselves against the uncertainties of sales abroad.

It is obvious how great a stability these contracts give to the trade, and how they are calculated to reduce the risk of its natural fluctuations to a minimum.

2. We have received the most positive assurances from Germans, both orally and through correspondence, that their exportations are wholly based on the security for the quality of the goods provided by the brand, and that if the brand is abolished they will withdraw from a trade in which the risks will, in that case, not be compensated by the profits. Such predictions of future conduct, however honestly made, cannot, of course, be received as certainties; many unforeseen circumstances may induce a change of mind. But, on the other hand, it is clear that the position of a German merchant would be greatly affected by the abolition of the brand. It is difficult to see how the buying by contracts could be extensively carried on without some neutral judge to pronounce on the quality of the goods delivered. The state of the market may furnish a strong motive to one party to find needless fault with the barrels, or to the other to contrive their rejection. The merchant will probably be driven to defer his purchase till he can inspect what he buys; not improbably he may prefer to inspect abroad, and then the contracts, with their advantages, disappear.

And it must not be forgotten, that merchandize which cannot be challenged may attract eminent merchants, who would stand aloof from the annoyances and chicanery incident to so disputable an article as cured herrings. Assuredly the dealers in the red herrings and other fish trades do not, for the most part, belong to the same class of society as the German merchants now connected with the white herring trade; and though Germans may still engage in the business, they may be very different Germans, and produce very different effects on the trade.

3. One weighty inference we conceive may be justly drawn from the preceding description. The system of contracts, combined with the competition of small curers, whom the brand allows to take up or abandon the cure of herrings with ease, secures for the fisherman the largest possible share in the division of the total profits—a larger share, we believe, than what he could obtain under any other system. This fact makes the support given to the brand by the great majority of the curers and the merchants the more remarkable, and the more entitled to consideration.

4. The bearing of this wide question on the peculiar population of the West Highlands should not be left out of account. In the counties of Caithness and

Sutherland, the chief seats of the foreign trade, a large proportion of the boats are manned by West Highlanders, who migrate annually—both men and women—in great numbers to the fishing on the east coast. It is computed that 5,000 resorted this year to the district of Wick alone. A few are owners of boats, but the larger part serve as hired men, receiving about 1 *l.* each a week from the owner of the boat, besides board and lodging. They come from barren regions in which agriculture affords but scanty subsistence ; and for them the herring harvest is the great resource of the year : it is reaped by the hard toil of nine weeks—a consideration of some national importance. They acquire in it habits of industrious energy, and learn their value by the reward which they bring. The commodities which they carry back home as the fruits of their labour beget the wants and desires of civilization, and thus steadily, though slowly, moral and social improvement is diffused over the west.

Already things are spoken of at Wick which were unknown before. The Highlanders, profiting by the eagerness of curers to engage boats, and their readiness to make advances, are becoming owners of boats and buyers of nets. Property will gradually create the habits which acquire and preserve it ; whilst, on the other hand, the actual poverty of the population leaves them ill prepared to bear the pressure of a period of transition. The desire to soften the trial, and to expose to the least possible risk the incipient change to a better order of things, may reasonably claim to reckon for something in considering the expediency of abolishing the brand.

5. But even upon the supposition that its abolition was decreed, and with the sole view of carrying it out, we conceive that its continuance for a short period, on the payment of a small fee, would be the gentlest and most economical process which could be adopted ; the most economical, because the receipt from the fee would much exceed the difference between the retiring allowances of the fishery officers and their full salaries ; and the gentlest, because the shock of a sudden transition would thereby be avoided. It is of the utmost importance to give the German consumer time to learn, by experience, that herrings may be bought with safety, without the old familiar brand of the Fishery Board. And what stimulus so effective to make him learn that lesson quickly as the pecuniary gain which it brings him ? Whilst the official branding lasts, some will be attracted by the cheaper price of the unbranded, others will value security for the good quality of the goods they buy more highly than the extra cost which it entails, but both together will sustain the consumption till the full change shall have been gradually completed.

6. Lastly, it must be observed, that the imposition of a fee will do much more than merely relieve the public purse from the cost of branding. It will test the reality and importance of the benefits imputed to the brand ; and if successful, will establish them beyond dispute. The experiment will be made in the face of unrestricted competition : the Crown brand will be loaded with a charge from which its rivals will be free ; and if it maintain itself, it may justly claim to be considered to rest on competition, as truly as any of the private brands with which it will have to contend. We are at a loss for a principle on which we could urge the Government to take away from a great trade a convenience which we have shown to be harmless, which will cost the nation nothing, and whose value will be attested by the surest of proofs, the free demand of the traders to purchase it.

On all these grounds, we have come to the opinion that the abolition of the brand is inexpedient, and we beg to recommend to my Lords its continuance, on the condition that it shall be self-supporting.

The question now presents itself, whether the fee will be paid and whether such a number of barrels will be branded as shall be sufficient to defray the cost of the branding establishment of the Board. We regret that we are unable to furnish their Lordships with any satisfactory reply to this question. It is one which does not admit of being answered now. The answer must be sought in Germany by the test of experiment. Whatever is now said by Scotchmen respecting their intention to pay for the brand or not is purely speculative.

They

They will ask for the brand, and pay for it, just according as they find that they are repaid its cost by a better price or readier sale. The decision rests with the German buyer. If he prefers branded barrels with the extra cost of the fee, the brand will be demanded and support itself. The character, however, of the fishing during the experiment will greatly influence the result. A small catch would enable unbranded fish to sell freely, and the brand would be in diminished request; a large catch would produce the opposite effect. It is certain that the experiment of pushing sales of unbranded fish would be largely tried during the first year under the fee. On the other hand, it is not impossible that the German merchants, who are anxious to keep up the brand, will rigorously require it to be applied to the herrings which they purchase, and will themselves pay the fee. What the issue of this conflict will be it is difficult to foretell.

It may be thought that the uncertainty whether the brand will be able to sustain itself may be prejudicial to the trade, and that its immediate abolition would be attended with less harm. But we cannot discover any particular mischief which can flow from this uncertainty. The engaging of boats does not begin before October in each year, and by that time the quantity of barrels which will be branded for the season can be very closely ascertained. A public notice, published in October of any year, that the brand has ceased to be self-supporting, will give ample time for making every arrangement required by its discontinuance before the following season in July. There is no fixed capital of any consequence in the trade, with the exception of the boats and nets, and these are not affected by anything but the state of demand and prices from October to the actual season of the fishing. The arrangements of the trade are really annual. Notice in October will give abundant leisure for providing substitutes for the superintendence and inspection of the officers, as also for the merchants to settle whether they will purchase herrings or not in the ensuing July. A year's notice must in any case be given before the brand can be abolished; and we are not aware of a single important matter which depends on what may or may not happen to the brand after the interval of a year.

We propose that the trial whether the brand will support itself should be continued for two years. The second year will furnish the decisive test of the real value which belongs to the brand. If, in October 1858, it is seen that the expense of the branding establishment will not be covered by the receipts from the fee, we recommend that immediate notice should then be issued that it will be discontinued in 1859.

With regard to the fee which should be demanded for the brand, several suggestions have been offered, involving in some form the imposition of a tax on every barrel of herrings cured, whether branded or unbranded.

We are of opinion that any such assessment would be impolitic and unjust. We know of no principle which could justify a compulsory payment to the support of the brand by those who think it injurious to them in foreign markets, or never use it in the home trade. The general and active hostility which such an impost would excite would speedily be fatal to the brand.

The only just and practical principle seems to us to be, that those who use the brand, whether as curers or buyers, should bear the cost of its establishment.

In determining the fee which should be charged for the brand, we beg to submit to my Lords, that we propose to continue the administration of the grant for piers and harbours in the Board of Fisheries, with increased duties and no increase of salaries; that this institution, therefore, with its necessary establishment and expense will remain, whether the branding sustains itself or not; and that consequently it appears to us to be just to charge the trade with that additional cost only which the Board will incur by keeping up an establishment for branding.

The present establishment for officers and clerks for the Board of Fisheries, approved by the Treasury Minute of 4th December 1849, is as follows:

	£.	s.	d.
Secretary	524	–	–
4 Clerks	690	–	–
Messengers	101	12	–
2 Inspectors	400	–	–
24 Officers	2,440	–	–
	4,155	12	–
Travelling Expenses	660	–	–
	£. 4,815	12	–

It appears to us that the sum of 200 *l.* of the secretary's salary, and 150 *l.* for clerks, will be an equitable apportionment of the cost to be charged against branding; the remainder of the salaries belonging to statistics, conventions with foreign powers, police, and piers and harbours, with all which the branding has no connexion.

There is no branding on the west coast; the officers, therefore, stationed at Glasgow, Greenock, Rothesay, Inverary, Loch Carron, Loch Shieldaig, Loch Broome, Stornoway, and the Isle of Man, cannot be considered as forming part of the branding establishment. The services of these officers, when on their own duties, have been confined to police and statistics; but during the branding season several of them are removed to the east coast, whose regular establishment is inadequate to perform the full work of the branding. We propose to abolish all these nine officers of the west coast, transferring their duties to a different machinery, to be explained hereafter; and, in order to compensate the east coast for their loss during the pressure of the season, we recommend the appointment of four supernumeraries for a portion of the year, to assist in the branding. The saving thereby made, in travelling expenses alone, would be considerable.

The cost of the branding may therefore be reasonably estimated thus:

	£.
Secretary	200
Clerk	150
Inspector	250
15 Officers	1,800
4 Supernumeraries, at 70 *l.*	280
Travelling	400
Office, &c.	200
	£. 3,280

This expenditure would be met by a charge for branding of 4 *d.* per barrel.

	Barrels.
Quantity branded last year	280,000
Deduct ¼ for diminished use of the brand when paid for	70,000
Estimated barrels for branding	210,000
Which, at 4 *d.* each, would produce	£. 3,500

The

The abolition of the nine west coast officers would effect a saving to the Government of 1,100 *l.*, besides the 3,500 *l.* obtained from the trade to defray the cost of the branding.

Before concluding this branch of the subject, we are anxious to represent to their Lordships the high respect which is paid to the fishery officers by every person connected with the herring trade. Considering the difficult and delicate nature of the duties which they are called on to discharge, the responsibility they lie under, and the small salaries they receive, the tact, discretion, and integrity, as well as kindness in giving counsel, which are imputed to them on every side, deserve the highest commendation. And it reflects much credit on the management of the Board of Fisheries to have reared and kept up so respected a body of public servants.

Measures and Barrels.

1. The measures authorised by law are the cran, containing from 1,000 to 1,200 herrings, the half cran, and the basket, or fourth part of a cran. The crans are branded with a crown. These measures are commonly adopted throughout the herring fisheries; in a few places which supply the home markets the sale of herrings takes place by tale.

2. The size and kind of wood of which barrels may be made for the trade in white herrings are minutely prescribed by law. These regulations do not apply to red herrings. We have explained before that the law gives to the fishery officers the right of access to cooperages. This compulsory interference with the packages used by a trade is a remnant of a legislation now gone by; yet Scotch curers are unanimously and strongly in its favour. Its extension to the trade in red herrings is generally desired by merchants and curers.

The duty of inspecting the barrels and measures is performed by the officers who administer the branding system, so that our recommendation to retain these officers would enable the Government, at no additional cost, to gratify the very positive wish of the whole herring trade that the existing regulations on these two points should be kept in force.

Statistics.

On this head, the evidence informs us that the statistics prepared by the Board are not valued by the traders in a degree commensurate with the labour which it costs to compile them. Statistics of all kinds are, however, greatly esteemed in Scotland. Having received no particular suggestions respecting them, all we have to remark is, that the satistics of the Fishery Board might be made less elaborate without detriment, and the officers thereby relieved from some arduous and unnecessary toil.

Conventions with Foreign Powers.

We are led to believe that the duty of carrying out the conventions with foreign powers is satisfactorily discharged by the Board of Fisheries, through the agency of the superintendent of the fisheries, in an Admiralty steamer specially appointed to this service of the Board.

It appears, however, that the herring fishery frequently passes from Scotland down the northern shores of England, and that increasing applications are addressed to the Board of Fisheries from that quarter for protection at sea. It is too much to expect that one Admiralty steamer can guard the whole coast against foreigners, from the Shetlands to Yorkshire. Some limit should be assigned to the duty of the naval superintendent, and a natural one presents itself in the extreme boundary of the white herring trade and the branding. A branding officer is sent annually to the Fern Islands and a few neighbouring ports. We recommend, therefore, that the Fern Islands, or some point a little to the southward of them, should be constituted the limit of the coast to be guarded against foreign encroachments by the naval superintendent of the Board of Fisheries.

Police.

The police exercised by the Board of Fisheries is small in amount, but presents some interesting features. It is administered by the fishery steamer, the cutter, the fishery officers at their respective stations, a boat under a fishery officer at Skye, with a crew hired for the season, and a boat at Wick, with another hired crew under the command of a petty officer from the cutter.

It appears that offences attended with violence are of rare occurrence amongst Scotch fishermen, who are as a whole an orderly body of men.

But there are many complaints of stealing of buoys, and of cutting and fouling of nets, and these must be held to be grave and mischievous offences, when it is remembered that often 500 or more boats are crowded together on the sea during the night, each with one mile and a quarter of net out, suspended by a large number of buoys, and that the loss of a night's fishing, if the herrings are on the ground, may cost the fisherman a large part of the profits of the whole season.

The peculiarity of the Board's police consists in its being moral and voluntary, not legal; a kind of court of natural equity rather than of justice. Offenders are brought before the fishery officer, and are tried by a jury of two or three fishermen, whose sentence, frequently extending to a fine, is obeyed with entire submission. Strong testimony to the value of this institution, and the usefulness of the officers in settling disputes, was given by the fishermen everywhere.* We confess that we should sincerely regret its disappearance.

Recourse is not often had to the jury, but the system is praised for its influence in the way of prevention, and contains, in our opinion, excellent elements which might hereafter receive a beneficial extension. Its non-legal character seems to us to be no real disadvantage. No doubt it is utterly incompetent to deal with cases of violence; but there is little danger of the fishery officers getting involved in legal difficulties; for if an offender refuses to submit to the officer or jury, the equitable tribunal is not brought into action. In fact, with the exception of the steamer and the cutter, no coercive police is provided by the Board. These two vessels possess the right to seize illegal nets and stop fishing on illegal days and hours—a right seldom exercised. Their general powers of police are very vaguely defined, being derived from the duty "to keep order" assigned to them by the law under which they act. It is clear that it is in the case of these vessels that the danger of using ill-defined powers really exists; but the tact and good sense of their commanders, and we must add, the dislike of exercising such hazardous authority, have generally kept them out of difficulty. With the present good conduct of the fishermen, it would hardly be expedient to make any change in the law.

It was proposed to us that justices of the peace should be empowered to try fishery offences, with the assistance of a small jury of fishermen. Several objections were made to this proposal, such as the scarcity of resident justices, and the doubt whether they would be willing to devote time and trouble to the settlement of petty complaints, the legal and coercive character of such a court, the restraint imposed by a legal summons on the complainant and his witnesses, compulsory attendance at a distant spot, and loss of time, when time was most valuable, the fees, the technicalities of legal proof; these and similar impediments would, it was contended, make fishermen averse to appeal to such a tribunal; and, in our opinion, it is very doubtful whether such a system could be carried out in practice.

The cutter of the Board, with her large crew and expensive establishment, is a useful but costly instrument of police. Wherever she appears she is hailed as the friend of fishermen; buoys and nets become comparatively safe. The captain

* We insert in the Appendix a petition to the Commission, signed by 321 fishermen, and others connected with the fishing at Portree; and also a letter from the Sheriff-substitute of Skye, as illustrating the value set on the Board of Fisheries and its police.

captain is invariably spoken of in terms of high respect, for the creditable discharge of duty during a service of many years. She is employed along the whole coast, from Ayrshire to the Lewes, and occasionally on the east coast, and is found very useful in giving assistance to wrecked or disabled boats, recovering nets and buoys when lost or stolen, searching out offenders, and preventing misconduct by the "terror" of her presence. She has also furnished at various times valuable aid in promoting and inspecting the construction of piers and harbours. Her boats row about among the fishing boats, and are represented as doing service in preserving order, and preventing wilful fouling, and cutting of buoys and nets, and other offences.

It has been represented to us that the true principle whereby to estimate the value of a police is not the number of offences detected and punished, but the good order which it sustains; and we have been asked to test the efficiency of the cutter by this standard. We admit the general truth of this doctrine, but it must not be pressed too far in its application, as it might be easily made to defend an excessive establishment. The unanimous evidence of the fishermen establishes the value and importance of the cutter when she is present, but being a sailing vessel, she is necessarily absent from large portions of the coast for long periods of time; and during these intervals she is unable either to check disorder or give aid in disaster; and we are forced to the conclusion, that as far as regards police and superintendence of fishing, her actual services are disproportionate to her cost.

We cannot therefore recommend her continuance on her present footing, but as the expediency of keeping up a vessel for the Board depends partly on the view taken of the machinery it will require for administering the grants for piers and harbours, we defer further remarks on this subject to a later part of this Report.

Trawling.

It forms a part of the duties of the Board of Fisheries to suppress the use of nets made with meshes of illegal size, and to prevent trawling with a seine net or trawl. Trawling is prohibited by 14 & 15 Vict. c. 26 (1851), an Act which had its origin in the mutual jealousies of the drift-net fishermen in Loch Fyne and the trawlers, and still more in the belief that the seine broke the eye of the shoal of herrings as they travelled up or down the water, and by dispersing them ruined the main fishing with the drift nets. The trawl was also complained of as killing many more fish besides those caught; the dead fish, also, as they floated on the water, being supposed to scare away the herrings. The Act has failed to accomplish its object, and has been unfortunate in its consequences. The difficulty of obtaining the legal evidence necessary for conviction has given complete impunity to offenders; whilst the successful continuance of unlawful conduct has tended to familiarize men with law-breaking and to demoralize them. The evidence of all parties concurs in declaring that trawling is as openly and as extensively practised as if it were legal; but the fact is also established, that the amount of herrings actually caught in Loch Fyne has largely increased. We heard, indeed, complaints that fewer fish are now found at its head than formerly; but independenly of the natural fickleness of the herring, a more probable cause of this decrease than trawling may be found in the enlarged number of boats which fish in Loch Fyne, and the 500 miles of net set nightly during the herring season in the narrow waters off Tarbet.

This state of things has created a general desire for the repeal of the law. Of its former advocates, many have become converts to the harmlessness of trawling; others have ceased to defend a law which is incapable of being enforced. We earnestly recommend the repeal of a statute which has no other result than to keep a considerable population in the habitual and successful violation of law.

Trawling is practised in the Firth of Forth also, to catch garvies or sprats. This is allowed by the law; but on the same ground with the garvies are found frequently small herrings, scarcely to be distinguished from garvies by form, size, or colour. It is unlawful to catch these herrings with the trawl, but they

are often so mixed up with the garvies that even the best disposed fishermen must give up the pursuit of the garvies or become involved in a breach of the law. The adversaries of trawling in the Firth insist on the mischievous destruction of the herrings when small and worthless; but it is difficult to attach weight to this objection when pleaded by men who use their utmost efforts to catch herrings full of spawn. A single boat-load of full fish inflicts an immensely greater injury on the breeding of herrings than could be done by all the trawling in the Firth during a whole year. The fishing for garvies, moreover, goes on in winter, and exposes the men to great hardships; a few poor fishermen at Newhaven gaining a scanty livelihood by it, when other employment is not to be had. The demand, moreover, for garvies or small herrings is trifling, being limited to the lower classes about the coast; so that it is a business incapable of much extension. We may add that the steady yearly increase of the herrings caught in the Firth of Forth proves that the trawling does no injury to the drift-net fishing. We cannot, therefore, find in the above stated objection reason enough to prevent us from recommending that the prohibition against trawling for herrings should be repealed for the Firth of Forth as for all other portions of the Scotch coast.

REPORT ON THE "BRAND,"

BY

CAPTAIN SULIVAN, R. N.

FINDING that I cannot possibly coincide with the other Commissioners in their opinions on the value of the brand, or their recommendation that it should be continued with the hope of its being made self-supporting, I am compelled to explain my reasons for thus differing, in a separate Report.

The advocates of the brand comprise a majority of the curers, the foreign buyers, and nearly all the merchants and fishery officers.

Its opponents comprise a minority of the curers, and a small proportion of merchants and officers.

The evidence on both sides has been so fully and ably summed up in the Report of the other Commissioners, that I shall only briefly notice it under the different heads, in order to connect my remarks with the different points of the evidence.

1st. The effect of the brand on the cure.

Its advocates assert that it is owing to the brand alone that the present cure has been reached, and that without it the cure will fall off, as it is the influence of the officers over all persons employed that keeps up the cure, and not the personal interest of the curer.

Its opponents, on the contrary, insist that it prevents a still better cure, as it brings down the price of all branded fish to the level of the lowest quality that is just good enough for the brand; and they assert that the interest of the curer, and his desire to establish a character for his own brand, must at least have as much effect in preserving a good cure as any inspection by a Government officer.

The brand merely ensures a cure of a certain quality; it requires full and spent fish to be separated, and that they shall be cured within 24 hours of catching; they have then to remain 10 days in salt, after which the casks are filled up. If these conditions are complied with the brand cannot be refused.

From unavoidable as well as many avoidable causes, a great difference in value must exist between different branded parcels, some being of superior quality, while others have only just escaped rejection by the officers, yet all are brought to one level in price.

Its advocates only claim a preference for some curers' parcels over others when the market is full, and it is generally allowed that branded fish are bought on the brand alone, without considering the quality, or the character of the curer, yet the difference in quality is allowed to be from 2*s.* to 4*s.* per barrel.

It must, I think, be evident to everybody, that under such a system, no man will incur expense to improve the cure, or to gain a character for his private brand. But I have little doubt that a still greater difference in value really exists between the best and worst full branded parcels of the same season.

The Dutch herrings are the same quality when caught, and their superiority is owing to their being cured directly they are taken out of the water. This is partly owing to the fish bleeding when gutted, which makes them whiter, and partly to their not having time to soften before they are cured. Every hour fish are kept before gutting and curing, adds to the softening, and therefore the injury, of the fish; and being exposed to sun and rain is still more injurious. It is therefore evident that if they are caught near the harbour, landed early, placed under cover, and cured immediately, they will approach as near in quality to the Dutch herrings as the nature of the Scotch fishing will allow of.

Many curers have covered curing yards, in which, however large the catch, the fish are protected from sun and rain, and can therefore never be as much injured as those must be that are exposed at the same time either to sun or

rain; yet a very large proportion of the branded fish are cured in this inferior manner. Many of the large curers have only open boxes on the quays or shores, and we have seen fish landed, after being exposed to a hot sun in the boats, remain untouched, except having a little salt thrown on them, under a burning sun till past ten o'clock; and this with a moderate catch. We were told they would be all cured by two o'clock; but with large catches it is sometimes night before they are finished. Those fish would all get the brand, and obtain therefore the same price as others that have been landed before sunrise, and cured before eight o'clock.

I cannot think it just or fair to the more careful curer who incurs the extra expense of covered curing yards, that a Government officer should step in to bring the price of his fish down to the level of those I have described, or to prevent his reaping any benefit that his better cure may deserve.

Is it reasonable to suppose that if all curers had to depend on their own exertions, and the character of their private brands, such careless curing as that I have described would be continued? unless, to save expense, they were satisfied with receiving a lower price for their fish.

As the Dutch herrings sell for 15 *s.* to 1 *l.* a barrel more than full branded Scotch herrings, owing to their superior cure alone, I cannot think that the difference between the best and worst full branded fish, cured under the different circumstances I have described, can be only about 3 *s.*

The opinion that without the brand the cure will fall off, is practically answered by the fact that on the west coast they do not use the brand at all, as they supply the Irish and home markets; yet the cure is at least as good as it is on the east coast. The curers on the west coast do not claim any superiority of cure, and think that the price they get, from 5 *s.* to 15 *s.* above the best branded fish, is owing to the superior quality of the fish when caught; but as they cure generally in vessels, as the fish are caught near the ports where these vessels lay, and are consequently cured at an early hour, it is probable the quality is partly owing to the cure.

Though much stress was laid by the advocates of the brand on the advantage of the officers going through the yards and watching the cure, it was distinctly proved that many parcels presented for the brand have never been seen before by the officers, and that they depend on the inspection alone for ascertaining the quality.

2d. The importance of the brand to the curer and buyer.

Its advocates assert that it gives great facilities for carrying on the trade, and that without it, the difficulty of getting the fish into the German markets would be so great, that a serious injury would be done to all connected with the catch, cure, or sale of herrings.

On the other hand, its opponents allow that it has helped to establish the trade; but they assert that the time has arrived when all Government interference should cease, and the trade be left to stand on its own merits alone. They also speak with confidence of being able to carry it on without experiencing the difficulties and injuries that the other party fear.

It appears to me that the real value of the brand to the curer is, that it enables persons to carry on an extensive business at many different stations much more easily and cheaply than they could without it. They depend on the officers doing great part of their work for them at the public expense; without them, they would have to attend more closely to their own business, and also to employ persons at higher salaries than they now do, to superintend their numerous curing stations.

The knowledge that the herrings when cured will be liable to inspection by the officer makes all employed as careful as if the master's eye was on them. Each salter's initials are on the casks he packs; and if any are rejected by the officer, the master can visit it on the persons in fault. It is evident to me that, under a system of sale by private inspection, the master would have exactly the same check on those in his employ, the only difference being that the parties who are interested would have to pay for it instead of the public.

The chief value of the brand to the purchaser is, that even without knowing anything of the article he is dealing in, he can, without any trouble or expense, buy parcels of cured herrings which have been inspected by a Government officer, and a certain quality guaranteed by a Government brand.

Without

Without the brand, he would either have to inspect every parcel he buys, in the same way the officer now inspects them, or, if incompetent to decide on the quality of cure, he would have to employ an agent to do that portion of the work for him.

Not one of the advocates of the brand could give a reason that I considered satisfactory why such a mode of conducting the trade could not be adopted. It would, of course, cause a slight additional expense; but we have the testimony of one of the most intelligent of the fishery officers, that he, or any good judge of cure, if employed to inspect for purchasers, could ensure the quality of the fish purchased quite as well as by the present system; and that he could, during a season, inspect a sufficient quantity to make a commission of 2 *d.* a barrel, or even less, an adequate remuneration.

To the smaller curers, selling in Scotland to foreign buyers, this mode of sale would, I think, prove as satisfactory as the present system. They would only have to submit their fish to the same kind of inspection as at present. It is true that the purchaser now often buys from them at the different out stations by letter only; but the officer has to visit their stations and inspect the parcels to be branded; and the purchaser or his agent could certainly do the same at no greater expense.

Strong efforts were made by the advocates of the brand to show that the small curer would suffer more especially if it were abolished; but the conviction on my mind from the whole of the evidence is, that it will make no difference to that class of curer who cures only at one station, and looks after his own business. I think this is the class that will be more likely to produce the best cured fish, if they have to depend on open competition. Those large curers who cure at many different stations are much more likely to feel the inconvenience of the withdrawal of the officers, who have really been acting as their unpaid assistants.

When, in the course of a few years, these smaller curers had established the character of their cure and private brands, it is probable that a much slighter inspection would satisfy purchasers, and I cannot doubt that in many cases parcels would be sold to order on the well-known character of the curer alone. In the red herring trade, we had the evidence of one curer that he has large orders from London houses some time before the fish are caught. They are for the foreign market, but are ordered and delivered without examination, on the credit of his brand alone.

Large curers, exporting their herrings to Germany, would save the inspection now made by the officer, but would probably sell to the buyers in the German ports, or to the agents from the interior, by a similar inspection, until the character of their cure was established. We were told that the barrels could not be examined in Germany without serious injury to the fish; but if parties prefer consigning their fish to an agent at Stettin to selling them at home, it cannot be very difficult to provide the agent with a good cooper who will open the casks and close them again with as much care as is now used in opening for the inspection of the officer. Some of these points are so self-evident that I almost hesitate to notice them; but many of the witnesses laid so much stress on them that I cannot pass them over without remark.

3d. The necessity of the brand for the German trade.

Its advocates assert that it gives a higher value to the fish in the German market, enabling parties to sell and resell entirely on the faith of the brand, and so pass them into the interior without examination.

Its opponents allow that, under the present system, the brand is necessary, as directly branded fish reach the market no others can be sold without a reduction in price of about 3 *s.* a barrel, and therefore those most opposed to the system are obliged to use the brand. But they assert with confidence that if all Government interference is withdrawn, the trade will soon go on as well without it, on the character and brand of the curers alone.

That the brand gives a certain value to the barrel of herrings over the unbranded, when both are in the market, there can be no doubt whatever; but it is, I think, equally certain that the market price is regulated by the supply and demand, as in all other trades. In the early part of the season, fish lightly salted and less closely packed, for speedy consumption, are sent into Germany without any brand, and meet with a ready sale at good prices; and there appears to be no difficulty in carrying on that unbranded trade, or in sending the

barrels into the interior without any injurious inspection; but directly branded parcels come into the market the unbranded parcels have to be sold at a lower price, whatever their quality; and consequently that trade has to be given up, and the brand adopted generally.

One effect of this system is, that no other kind of cured herring can be sent into the market but the thoroughly salted and packed fish that the Government officers can alone give the brand to, and which are intended to keep good for at least 12 months. Fish salted more lightly and less closely packed are allowed to be superior, if required for consumption within three or four months; and if the trade were entirely free, it is probable that at all times there would be a demand for a certain quantity cured in this manner, for the consumption of the higher classes, who now give such good prices for the Dutch herrings.

The officers allow that a superior quality of fish can be cured in this manner, if not required for keeping above four menths; but however superior in quality they cannot brand them, and therefore no one can send them to compete with branded fish.

If the trade were open, I feel confident that different kinds of cure, to suit different classes of customers, would become the rule, and a nearer approach in quality and price to the Dutch fish would be attained.

Again, it is said that a slightly better cure can be made by the use of Lisbon salt, at an additional expense of about 6 *d.* per barrel; but no one will use it so long as he cannot get even 6 *d.* over the market price for other branded fish.

4th. On the effect the abolition of the brand would have on the present course of trade.

Its advocates assert that the trade would be so seriousiy injured and all confidence so thoroughly destroyed if it is done away with, that the German buyers in the Scotch markets, who are now of such great benefit to the trade, would give it up entirely, and so cause a serious injury to all engaged in the herring fishery.

Its opponents almost ridicule this idea; they say that so long as the Scotch have herrings to sell, which Germans want to eat, so long will buyers come; but that if they were to give it up there are Scotch merchants who would take their places.

Time would alone show which of these views is the correct one; but I think a good opinion may be formed on the subject from what has taken place when a similar change was made in other fishing trades.

Cod and ling, cured for exportation, were examined and branded by the officers up to 1850. The chief trade was from the Shetlands to Spain, and the fish were ordered and delivered on the faith of the brand alone.

Since it has been abolished, Spanish buyers have sent agents to the Shetlands, who buy the fish by inspection, and the trade has gone on as well as it did before. The amount exported appears to have fallen off slightly until last year, when it reached an amount above the average of the five years preceding the change, and considerably above that of the three preceding years. The falling off was in all probability caused by increasing demands in the home markets; for instead of the cod-fishing interests suffering by the change, the average yearly quantity cured from 1845 to 1849, inclusive, was 90,800 cwts.; and this was larger than during any previous five years; but from 1851 to 1855, it reached the large amount of 104,800 cwts.; the year 1855 showing a return of 113,561 cwts.

I have no doubt that many at the time declared the abolition of the brand would ruin the fishery. So far from the cure falling off, we were assured that it has steadily improved, and that fish, cured as they were some years since, could not now be sold in the London market.

The haddock fishing has also increased, the cure improved, and the trade prospered in a remarkable manner for some years past; yet it has had no Government brand to assist it.

I am convinced that much of the prosperity in the different classes of fishing is owing to the increased accommodation and protection afforded to the fishermen by the harbours constructed on the east coast, with the aid of the grant administered by the Board of Fisheries; and I cannot refrain from expressing my opinion, that had the brand been abolished some years since, and half the money it has cost yearly been employed in improving and constructing fishing harbours,

harbours, it would have conferred a far greater benefit on all who have an interest in the Scotch fisheries.

It has been asserted by many witnesses that as cod, ling, and haddock are cured dry, they afford no comparison with the herring trade; but this objection cannot apply to the pilchard trade.

The pilchard is something similar to the herring; the fishing is carried on during a few weeks only; they are salted in casks; and have for a long period been exported to Italy.

Formerly this fishing was also under the Scotch Board, and the brand was used, as it is for the herrings, an officer being stationed in Cornwall for that purpose. Since its abolition the Italian buyers have employed agents in Cornwall to examine and purchase the fish; and the trade has gone on as well as ever. One of the leading persons interested has stated that they are glad both officer and brand have disappeared.*

Now, if in these two foreign trades agents have been sent to inspect and buy the fish since the brand was withdrawn, and, in fact, to do the same work that the officers did before, is it at all likely that Germans, who now employ agents to buy in Scotland, will cease to do so, from the very circumstance that has caused foreign buyers in similar trades to employ agents in this country for the first time?

5th. Dishonest and fraudulent curers injuring the whole trade.

The advocates of the brand assert, that if the Government inspection is withdrawn, attempts at fraud are sure to follow, and that, consequently, the character of Scotch herrings will suffer, and the whole trade be injured.

Its opponents reply, that any frauds of the kind could only drive the dishonest curer out of the market by destroying all confidence in his cure and private brand.

The correctness of the latter opinion is, I think, proved by the evidence of the curers on the west coast, where the brand is not used, and they have no interest either way. They show that attempts to pass off inferior fish can only injure the person who does it, as he would probably have to give up the business, or at least to submit to a much more rigid and troublesome inspection of his fish in future.

It is, I think, evident, that far from injuring the honest and superior curer, it would ensure a greater demand for his brand; but so strong must be the motive, from self-interest alone, to supply a good article, that little fear need, I think, be entertained of any serious frauds being attempted.

6th. On the amount of injury that would be caused by the abolition of the brand.

Its advocates allow that, for the home markets, amounting to two-thirds of the whole trade, the brand is unnecessary, and therefore it is to one-third of the trade only that their arguments can apply. They even allow that it is the temporary injury and confusion they fear; while they admit that in time it would probably recover itself, and be carried on, as other trades are, by a system of private inspection, in which the characters and brands of the curers would greatly assist.

On the other hand, the opponents of the present system assert that the effect, even at first, would be unimportant, if certain notice was given by Government of the intended abolition; that the trade would become steady, and that the evils connected with the brand at present outweigh any to be feared from its being withdrawn. They assert that no Government interference is necessary, and that they know no reason whatever why this trade cannot be carried on as other trades are, on the principle of open competition in the market.

The

* Since writing this Report, I have received much additional information on the pilchard trade, which in every respect confirms my opinion. The trade is a much larger one than I had any idea of. The average quantity cured between 1844 and 1854 was 48,000 barrels—in one year it amounted to 84,000—and of these four-fifths were exported. The agents inspect the cured fish by opening a small portion of the casks. No difficulty whatever is found in carrying on the trade, and the interference of a Government officer would now be strongly objected to.

The evidence of parties most strongly in favour of the brand appeared to me to confirm in some measure the views of their opponents, from the great difficulty all appeared to labour under when pressed to explain what the serious injury they anticipated really amounted to, and why the trade could not be carried on, as other trades are, without Government assistance. They appeared to overlook entirely the objectionable principle of such interference, and to rest much on the argument that, because they find the present system answer well, it would be wrong to alter it; but they seemed to object to carrying on the trade by private inspection, chiefly on the ground that it would add to the expense and trouble.

Not only did they entirely fail to convince me that there is any thing peculiar in this trade to make Government assistance necessary, but the evidence satisfied me, that, as an open trade, it would have an advantage over most other trades, as it would be carried on almost without competition from other quarters. Dutch herrings are not supplied in sufficient quantities to compete in the general market, and their price confines their use to the wealthier classes. The Norwegian herrings, with the exception of a small and unimportant portion, are so inferior in quality when caught, that no mode of cure will enable them to compete on equal terms with the Scotch, which appear to have the entire command of the principal German and Polish markets; but of course subject to the usual rules of supply and demand that must govern all trades.

One of the most intelligent and influential witnesses remarked, that when the supply was moderate, and the demand regular, they wanted no brand, as it could do them no good, and that when the supply exceeded the demand, the brand was useless, and could not save them from the usual course of trade in such cases. If any proof were necessary to support such a common-sense argument, it is to be found, in a very striking manner, in the history of the German trade in 1849, when the supply being excessive, the net returns for the best branded fish were as low as 5 *s.* and even 3 *s.* a barrel, which inflicted a ruinous loss on either the curers or merchants.

In consequence of the good demand in Germany last year, and the prices obtained, contracts were made with fishermen and merchants for this season at a higher price than had been known before. If the catch had proved a very large one, it is probable that merchants and those curers who export their own fish would have suffered greatly, notwithstanding the aid of the brand, and the moderate catch of this season has probably prevented very serious losses. For the same reason, if the brand is withdrawn, and the supply the following year should only be in proportion to the demand, all will go on smoothly; but should an unusually large catch cause very full markets, prices will come down, perhaps even below what the curers have paid the fishermen, and great losses would follow, which would then be attributed by many to the withdrawal of the brand. The peculiar nature of the trade must always make it liable to these fluctuations.

7th. On retaining the present system, but endeavouring to render it self-supporting.

While one party consider this would be preferable to its abolition, and generally express their willingness to pay for it, another party of those most favourable to the brand, and including some of the largest and most influential curers, positively declare they will not pay for it, but will endeavour to force the Government to continue the present system.

The opponents of the brand object as strongly to its being continued, in hopes of its being self-supporting, as they do to the present system. They assert that it would equally prevent competition in cure; while many who object to any Government interference whatever, and are quite willing to depend on open competition, would be compelled to use it, and pay for it, or they would not be able to compete with branded fish when selling to buyers for the German markets.

With respect to the probable payment for the brand by the trade, there is little difference of opinion; the general impression being that the German buyers would compel its use as at present, and that consequently a large portion of the curers, including nearly all the smaller ones, would be forced to pay for it; but that large curers exporting their own fish would try to do without it.

In

In considering this question, I will pass over the objectionable principle of Government interference, and will explain the manner in which a self-supporting system could alone, I think, be carried on.

In the first place, it would be necessary to reduce the estimated expense of the brand to the sum that would be actually required for a somewhat reduced staff of officers, together with such a portion of the secretary's salary and office expenses as would be due to that portion of his duties only. Without entering into particulars, it will be sufficient to say that the expense would probably not exceed 4,000 *l.*, or at the rate of $3\frac{1}{2}$ *d.* a barrel, taking the number branded in 1855, a very abundant year, and $4\frac{1}{2}$ *d.* a barrel for the number branded in 1854. As some now using the brand would certainly not pay for it, I consider that a tax of at least 6 *d.* per barrel would be necessary. There will be this difficulty in fixing a sum, that the higher it is, the fewer will be the number paying for it.

The salaries of the officers, and other expenses, would of course have to be voted in the usual manner, but the payments for the brand could only, I think, be regulated by levying a tax on every barrel of branded herrings, which could be collected by the Custom-house authorities on shipment.

There is, I think, one very serious objection to such a plan, and that is, the uncertainty in which the trade must be carried on from year to year. Even in the first or second year of its existence, if the payments prove insufficient to meet the expenses, a vote of the House of Commons would probably at once put an end to it.

Nothing can, I think, be worse for any trade than such uncertainty and doubt, and, therefore, without considering the objectionable principle of Government interference, but looking only to what I believe to be the real interests of the trade, I cannot possibly recommend Her Majesty's Government to try such an experiment.

Having given the whole subject, which was entirely new to me, my most serious consideration, I have no hesitation in advising strongly, that instead of attempting to continue the Government interference in this objectionable manner, it should be entirely withdrawn, after sufficient notice being given, and the trade left to depend on its own merits alone.

As contracts are often made nearly a year before the fishing commences, I think at least one year's notice should be given. I would therefore recommend that the present system, so far as is necessary for the brand, should be continued for one more fishing season, and that after 1857 all Government interference with the trade should cease.

Some witnesses have gone so far as to assert, that if the brand is no longer paid for by the public, but is continued by the desire of parties in the trade, who are willing to pay the expense through a tax levied on the barrels, it ceases to be a Government interference at all; that is, a staff of officers appointed and paid by the Crown, and who put a Crown brand on barrels of herrings to give them a certain value over those not branded, is not to be considered a Government interference, because at the same time a tax is put on the branded barrels in order to make the staff of officers self-supporting. Yet this tax is to be forced by a majority on a minority, who assert it does them harm instead of good.

To me it appears to be a more objectionable interference in one respect than the present system; for one forces the brand on the minority, but gives it to them for nothing; the other, if adopted, would add compulsory payment for what they believe is no benefit to them.

I cannot conclude this subject without bearing my testimony to the merits of the officers of the Board of Fisheries, as a body. It is highly creditable to them, that out of the large number of witnesses examined privately, many, of course opposed to the officers, and some few annoyed because at one time or other their fish had been rejected for the brand, on what they considered too slight grounds, not one failed to do justice to the strictly honourable conduct of every officer they had met with.

They have all small salaries, they are placed in positions of great responsibility, and large sums of money are constantly passing from buyer to seller, entirely on the faith of their strict impartiality in discharging their duty. That

all, without exception, should have performed these duties in such a manner as to gain the approbation even of those who object to the system, is certainly the highest compliment that could be paid them.

Should they be deprived of their situations through the Board of Fisheries being abolished, I am sure that many of them could be employed with advantage in other departments of the Government.

I also desire to state how warmly I concur with my fellow Commissioners in the remarks they have made on the cordial assistance afforded us throughout the inquiry by the secretary of the Board of Fisheries.

On the Measures and Size or Barrels.

The wish is very general that the size of barrel, as well as of the cran measure, should be regulated by the Government.

If the Board and brand are continued, no change would be necessary, but if they are done away with, and the trade is left quite free, I think there would be great difficulties in the way of any Government interference with the size of package, whether barrel or box, in which cured herrings are packed.

On the west coast the interference of the officers with the size of the barrel is little more than nominal, but the curers adhere to the usual size for their own interests.

I see no reason, therefore, why parties engaged in the trade should not regulate the size of the package, as they do in other trades. If parties contract for herrings to be delivered without inspection, and wish to have them in barrels of the usual size, it can easily be inserted in the contract. Those who buy by inspection can see the size of the barrels as easily as the officers now do. If parties, for convenience of carriage or other purposes, desire to have herrings packed in barrels of intermediate size, say from 20 to 25 gallons, and curers are willing to supply them, I cannot see any reason why they should not do so, when the trade is an open one.

The cran measure, by which fresh herrings are sold, can be easily established and regulated as the bushel and other measures are; and it would be an advantage if half and quarter crans were also made legal measures, as they are so extensively used in the trade.

Remarks on the other Heads of Inquiry.

Agreeing as I do generally with the opinions of the other Commissioners on the present system of statistics and police, it is necessary that I should point out how these duties could be carried out, if, in consequence of the abolition of the branding system, the Board of Fisheries should also be done away with.

1st. Statistical Returns for Parliament.

It appears from the evidence that comparatively little importance is attached to these returns at present. The Report is not published until long after the fishing is over, and the cured fish disposed of. The weekly returns of the fishing at the different stations, which are of the most importance, are now published by the newspapers. It is not, I think, necessary that the particulars of the Scotch fisheries should be laid before Parliament any more than those of the English fisheries. The returns of the export trade could be obtained from the Custom-house authorities.

2d. Convention with Foreign Powers.

This could be carried out as at present by the officer commanding the vessel of war attached to the fisheries, but as he would be deprived of the valuable assistance he now receives from the secretary to the Board of Fisheries, it would be a more difficult duty for an officer to whom the service was new; I would therefore suggest that, when possible, an officer should be selected for the duty who knows the work well, irrespective of his own rank, and the size of the vessel employed; as there are few positions requiring more judgment and forbearance.

I quite agree with the other Commissioners in the opinion that the district watched by the one steamer employed should not extend to the southward of the Fern Islands.

3d. Home

3d. Home Police on Land and Water.

The police duties exercised by the officers on shore appear to be so trifling that they may be altogether omitted.

The police afloat, which is nearly entirely confined to the west coast, has been fully explained in the Report of the other Commissioners on this head. I entirely coincide with them in their views on the question of trawling, as well as on the way the disputes between the fishermen are settled by the master of the cutter.

That the expense of such a large vessel and crew has been out of all proportion to the work required cannot be doubted; the same expense divided between four small decked vessels would have provided four equally effective police establishments at different points of the coast. Two such small vessels of about 20 tons, with an officer and four or five men in each; one stationed in the Skye district, and the other near Loch Fyne, would have been more useful for police work than the one large vessel. The expense of these vessels would probably not exceed 400*l.* a year each, while the expense of the cutter has, with the boat's crew and officer at Skye, exceeded 2,000*l.* a year.

Should the Board be continued, two such small vessels would answer every purpose of police for the west coast.

I am aware that a larger vessel is said to be necessary for the purpose of visiting different parts of the coast in connexion with the construction of harbours under the Board of Fisheries, but I cannot possibly coincide in such an opinion. Throughout our examination of the witnesses on the west coast, including the master of the cutter, such an opinion was never expressed; I cannot therefore join in recommending it.

For all purposes connected with the formation of harbours, the steamers running to different points of the coast afford much better means of conveyance for the engineers or others, than any sailing vessel, and at less cost than the additional expense of such a vessel. We did not hear that the cutter had been employed much for this purpose, and I have no doubt the engineer's time is too precious to allow of his using a sailing vessel for it.

For the east coast she would be quite useless. When the secretary was visiting the different points of the coast in 1853, having gone through the islands of the west coast in the cutter, the Government steamer was to have met him at Skye, to take him round to the east coast; and as she was unable to go to Skye, his visit to the east coast was given up. This is to me a convincing proof that a sailing vessel is quite useless for the purpose. It is on the east coast, more particularly, that harbours are required, as nature has there given the fishermen no shelter. With the exception of one or two places on the exposed coast of Lewis, where there are many fishing boats, and no shelter, I saw no place on the west coast that would justify an outlay of public money. I cannot consider that where nature has provided a safe land-locked harbour, and where, from the increasing trade, a pier is required for the convenience of steam-vessels shipping and landing goods, any just claim for Government assistance can be made.

The proprietors of the land, the owners of the steam-vessels, all persons in the place engaged in trade, as well as all the fishermen, have a joint interest in the construction of a pier, and could, if they chose, quite as easily construct one without Government assistance, as proprietors and fishermen on the east coast can raise their portion of the cost of harbours to meet the Government grant. If the owners of 100 fishing boats can raise 4,000*l.* towards making their harbour, and tax themselves heavily to repay it, surely it is not too much to expect that in constructing a pier at a cost of 1,000*l.*, or at most, 2,000*l.*, in a land-locked harbour, where so many different parties are interested, and will each share in the accommodation, the expense shall be borne by these parties, and not by the public.

It is where the lives and property of the fishermen are at stake, and where valuable fishing grounds are lost to them for want of some place of refuge in bad winter weather, that a just claim can alone be made for Government assistance.

It is therefore quite evident that if a vessel was kept up for this purpose, the whole of the additional expense would be incurred for, at most, a very small harbour expenditure among the islands on the west coast; and even for that the public means of conveyance would be better and cheaper.

These remarks might more properly have come under the head of piers and harbours, but as our Report on that subject is an unanimous one, with this exception, and as the vessel is also connected with the question of police, I have connected them with the remarks under that head.*

It remains to be considered how the police shall be carried on if the Board of Fisheries should be done away with.

The fishermen appear to be on the whole a very orderly body of men. On the east coast, with the exception of a petty officer and boat's crew at Wick, they appear to be left without any police; as the one Government steamer is required particularly near the French fishing grounds, to the south of the Firth of Forth.

On the west coast, out of the many thousand fishermen that the cutter visited from time to time, the number of complaints made during the first seven months of this year amounted to two; and with the exception of the place the cutter was at for the time, the whole body of fishermen south of Skye were left without any check on them. I cannot therefore think that any special police is required to keep them in order, any more than for the English fishermen; and I should not fear any serious consequences asising if they were left to their own local authorities.

The system of having their disputes decided by a jury of three or five leading fishermen appears to have worked so well, that it would be an advantage if it could be continued and legalized, a magistrate of course presiding.

Where officers of the coast guard are stationed, they might also have power to preside over similar investigations; and, in cases of felony, to hand the accused parties over to the proper authorities.

At present there are no coast guard stations near the large fishing grounds on the west coast. If an officer was stationed in the Loch Fyne district, and another at Skye, and each had a small decked vessel, such as I have described, under his orders, they could, while carrying out their coast guard duties, give the fishermen the same kind of assistance they now receive from the cutter.

Administering Grant for Harbours.

The present mode of working the grant for harbours appears to be so very satisfactory in every way that I should strongly recommend its being continued. If the brand is abolished, and the chief duties of the Board of Fisheries consequently cease, I would advise that, without any alteration in its construction, it should become the "Board of Harbours," and should continue to administer the grant we recommend.

As a small portion of the secretary's duties would, comparatively, consist of work connected with the harbour grant, a corresponding portion only of his salary should be charged to that grant. The departments of manufactures science and art, which cause an increasing amount of work, ought to bear their full share of the secretary's salary, and the expenses of the office.

B. J. Sulivan, Captain, R. N.

---

* I have omitted to state that I thoroughly agree with the opinion given by the other Commissioners on the necessity of doing away with the objectionable prohibition against trawling.

B. J. S.

JOINT REPORT OF THE COMMISSIONERS

On the ADMINISTRATION of the GRANT for PIERS, QUAYS, and HARBOURS.

THE annual sum of 3,000*l.* accorded to the Board of Fisheries by Act of Parliament, for the construction and improvement of piers and harbours, is administered on the principle of grants in aid, made in support of local contributions. The law prescribes that at least one-fourth part of the whole expense shall be defrayed by private monies, but this proportion is often, and in some instances largely exceeded.

The field for the useful application of such grants is most wide. The herring, cod, haddock, and other fisheries furnish employment to great numbers of fishermen spread over an immense extent of coast; yet between Dundee and Orkney there is only one natural harbour which a boat may run for in safety during heavy easterly gales. Every little creek on the east coast is crowded with herring boats during the season, and, without protection from piers and artificial harbours, there is always much danger of injury and loss. On the west coast, nature has provided land-locked bays and sheltered harbours; but the remoteness and poverty of the population render some assistance from the central Government desirable to enable them to avail themselves of these natural advantages. Fishing communities are commonly poor, separated by their habits and occupations from the rest of society, and rarely bound together in large trading associations. This is pre-eminently the case in Scotland, where the range of coast is vast, the population thin, and the soil barren. The fishermen have no gentry or capitalists amongst them to act as leaders, and they are but feebly connected even with the landowners on whose land they dwell.

The landowners themselves are often men of limited means, and pressed by nearer and stronger claims for aid than any that can be pleaded by the fishermen. Hence, fishermen have everywhere been found helpless, and slow to avail themselves, by combination and enterprise, of the means of improvement and wealth lying around them.

These are facts of great importance for estimating the action, both past and future, of the Board of Fisheries.

That Board possesses some valuable qualifications for dealing with bodies of men so constituted. Its members are persons of rank and consideration in the country, and can bring great influence to bear on the landowners, in stimulating them to help the fishermen. Many a landowner who would maintain a reserved silence towards an ordinary Government officer will speak freely of his personal position, and what he is able or may be expected to do for his fishing people, to gentlemen moving in the same society with himself. Being connected with all parts of Scotland, the members of the Board are familiar with local wants, and can quickly estimate the particular aid which is needed in each case. The Lord Advocate and the Solicitor-General are *ex-officio* members of the Board, and their professional advice is highly useful in settling the many legal questions brought before the Board by the negotiations for the construction of harbours. The meritorious devotion of time and thought by these great officers of the Crown to the service of the Board during each successive Government is represented to be unsparing. Equal zeal and interest in the welfare of the fisheries are exhibited by the other members of the Board generally. Hence, it is regarded and valued as a truly national institution by all Scotland. We have not heard a single proposal expressed for any alteration in the constitution, much less for the abolition of the Board.

The chief instrument of the Board is the secretary, whose position in being the paid officer of an unpaid body necessarily gives him large influence over its administration. On him devolves the duty of visiting the localities, exhorting the fishermen, communicating with the landowners, effecting surveys at the joint cost of the Board and local parties, and estimating the wants and capabilities of each case. On his aptitude for sympathizing with and influencing the gentry, traders, and fishermen, the success of the Board's administration

mainly depends. The Board is fortunate in possessing the present secretary; and we feel it to be a duty to record our conviction that, by the heartiness with which he has carried out the work, his untiring energy, and the warm interest which he has always taken in the success of the fisheries, Mr. Primrose has proved himself a most efficient and valuable servant of the Government.

The Board has been equally fortunate in the appointment of its present engineers, Messrs. Stevenson, whose eminent ability and success in the planning and executing of its works meet with universal recognition.

The following TABLE will show the success with which the Board, through its secretary, has obtained contributions towards the formation of harbours from persons locally interested in promoting these works:—

RETURN of PRIVATE MONEY raised by the BOARD of FISHERIES for PIERS, QUAYS, &c., since 1848 (date of present Secretary's Appointment), with the Amount of Public Money expended thereon.

Year.	PIERS, QUAYS, &c.	Private Money raised.			Public Money expended.

Note.—Proprietors give the site in addition, and buy up the Crown rights.

Buckhaven Harbour furnishes a striking illustration of the public spirit with which the fishermen meet the aid held out by the Board, and of the energetic manner with which both co-operate in developing the prosperity of the fisheries.

The fishermen of Buckhaven, who are about 300 in number, and own about 100 boats, applied to the Board for assistance to enlarge their harbour, and offered to collect 500*l.* towards the expense. It was explained to them by the secretary that a much larger sum would be necessary, and they were induced to promise 1,000*l.* When a survey and estimate showed that at least 3,000*l.* would be required on their part to meet the grant from the Board, they not only succeeded in raising this sum, but an additional outlay becoming necessary, they eventually raised their contribution to 4,000 *l.*; this they did by borrowing about 3,000 *l.* from a bank, the leading curers and tradesmen becoming security for the loan, whilst they held in turn a bond from the 100 fishermen who owned boats, as a counter security to themselves. A self-imposed taxation was then fixed by the fishermen, for the purpose of repaying the loan with interest, and though it amounts, per boat, to nearly three times the sum paid at any other harbour, besides a further tax on each fishermen belonging to the place, it has been most cheerfully paid. The debt has, in four years, been reduced by nearly 1,000*l.*, and the fishermen state that they only regret that they did not raise a larger loan and obtain a still better harbour.

The

The spirited example of the men of Buckhaven is stimulating others to emulate their efforts. Their neighbours at Cellardyke, being dissatisfied with their present harbour, have raised already 1,000 *l.* towards constructing a new harbour close by, at Craignoon; and so great is the zeal felt by all, that even the young men and women engaged in the cure of herrings have contributed nearly 100 *l.* for the same object.

The adjoining port of Anstruther has been moved to rivalry by the energy of Cellardyke. Both places are now competing for the assistance of the Board, and both are aware, that next to the natural character of the coast, nothing is so likely to carry weight with the Board as the extent of local help with which they invite its favour.

The beneficial influence of such a system in awakening enterprise, and teaching men to use the advantages which nature has given them, is apparent; and the results we have described seem to us to furnish satisfactory proof of the successful administration of the public grant by the Board of Fisheries.

On one point, it appears to us that the administration of the grant might be improved. It has been the rule to exempt all fishing boats, vessels, and fish from harbour dues, when assistance has been given by the Board, and a bond to this effect has been required from the proprietors. If moderate harbour dues were allowed to be levied, proprietors or others wishing for a harbour would probably come forward more liberally with assistance. Fishermen appear generally willing to pay dues when additional safety and convenience are provided for them. In such a case as Buckhaven, it seems particularly hard on the fishermen, that while they tax themselves so heavily, they should be unable to levy any dues on strangers using the harbour, or on vessels and their cargoes of either salt or cured fish. It appears to us to be just that a moderate payment should be made, in return for the benefits conferred, by those who have borne no part of the expense of construction; and if the sanction of the Board, or the authorities administering the grant at the time, as well as of the Board of Trade, to the scale of dues were obtained, all objections to such dues would be removed.

Our attention has been called in one case to an evil arising from the difficulties which stand in the way of transferring the possession of harbours from the Commissioners of Roads and Bridges to the proprietor, even where both parties desire the change.

At Port Mahommack, a small pier, forming a harbour, is greatly in want of repair, and also requires extension, to meet the increasing wants of the place as a fishing and shipping port. The proprietor is not only willing to take the harbour off the hands of the Commissioners, but is also ready to assist in enlarging it, by paying a much larger share than usual to meet a grant by the Fishery Board.

The Commissioners are, we understand, equally willing to give up the harbour, but have no power to do so. The increase and improvement of this harbour would not only be of the greatest benefit to its own fishermen, but to those of other stations, who avail themselves of it as a place of refuge when they dare not attempt to run for their own ports. It is most favourably situated both for herring and line fishing, and it will probably become one of the most important fishing stations on the east coast. We have reason to believe that a clause in a Bill of Sir A. Campbell was intended to meet cases of this kind, but we regret to say it has not yet been carried through Parliament.

We believe cases may arise in which harbours would be of the utmost importance to the fishing interests, but in which the parties locally interested have not the means of advancing their share of the money required. If in such cases an advance could be made to them on the same plan as that on which drainage loans are granted by Government, and at the same time moderate dues were allowed to be levied, many persons would probably avail themselves of it. The case of a small fishing harbour at Burnmouth will illustrate this view.

It has at present a small pier, built by the Board some years since, but only sufficient to shelter about 20 boats; it has the advantage over other places on that coast, of being partly protected by rocks off its northern point, so that in northerly or north-easterly gales, when boats dare not run for Dunbar, Coldingham, or Eyemouth, they could run for Burnmouth in safety, if the harbour were large enough to protect them when in. Even as it is at present, boats some-

times run for it, and bring up in the bight outside, when they cannot run for the other places mentioned.

Besides being valuable as a place of refuge, on a coast where refuge is very much required, and where an extensive winter fishing for cod and haddock is carried on, and is becoming of increasing importance, it is also important as having a railway station by which fish are sent into England in increasing quantities. Even with the few boats that now find shelter there, 500 tons of fresh fish were sent from it by rail in 1854, and this was increased to 1,000 tons in 1855. As the railway company is so much interested in this question, it is probable it would assist by making a road up the glen, whenever additional harbour accommodation was provided.

These places are referred to, only because they help to explain certain general views, and not with the intention of giving them a prior claim to assistance.

The order in which works should be undertaken must necessarily be left to the judgment of the authority administering the grant, and must depend on the readiness of local contributors to assist, as well as on the merits of the case.

There are many places, on the east coast more especially, where nature has given no shelter whatever, and where the lives and property of fishermen can receive protection only through the extension or construction of harbours. Even during the summer herring fishing such harbour improvements may often be of great value, but for prosecuting the winter line fishing, which is yearly becoming of greater value to the fisherman, they are still more necessary.

A grant of 3,000 *l.* yearly would require to be continued for a great number of years before even the most necessary works could be accomplished, as the grant for three or four years is sometimes required for a single harbour. Provided that persons connected with the localities are ready to come forward to assist, it would be very desirable for the sake of the fishermen and the fishing interests generally, that the necessary harbours should be completed sooner by a larger yearly grant for a limited number of years. In no way could a portion of the money that may be saved, either by the reduced expenses of the Board or its abolition, be so beneficially expended in Scotland as by the erection of harbours where still required.

We would recommend, therefore, that in addition to the grant of 3,000 *l.* now secured by Act of Parliament, an annual sum of 3,000 *l.*, making 6,000 *l.* in all, be yearly granted for this purpose for a period of eight years, by which time the works most needed will probably have been executed. But it is very important that this additional grant of 3,000 *l.* annually should be awarded for the whole period of eight years by a special Act; for otherwise, there would be no trustworthy basis for negotiations, and both the Board and promoters would be seriously hampered in their arrangements if subjected to the uncertainty inseparable from annual votes in the House of Commons. Much of the good which the Board has effected owes its existence to the assured continuity which the grant enjoys by law.

The special case of Dunbar Harbour was brought under our notice. We received on the spot ample evidence of its dangerous state, and of its great value to a large body of fishermen at nearly all seasons of the year. Since our visit the sea has displaced a portion of it, and unless some remedy be speedily applied, there is imminent risk of its being swept away altogether. Its construction cost 14,000 *l.*; and this large outlay, it is estimated, can be saved from destruction only by a further expenditure of 6,000 *l.*

At present nothing is being done to save it; and the subject being under discussion between the Treasury and the corporation, we feel ourselves precluded from offering any specific suggestions respecting it; but we beg to represent to my Lords the extreme urgency of the case, and the high and increasing importance of the harbour to a very valuable fishing in the Firth of Forth; and to express also our full belief that all parties at Dunbar, corporation, traders, and fishermen alike, would readily meet the Treasury with contributions for restoring and maintaining their harbour.

At Wick our attention was called to a proposed plan for constructing a harbour of refuge, with sufficient depth of water for coasting vessels, and the smaller class of Government steamers at the lowest spring tides: the Fishery Society, by which the harbours of Wick at present are owned and managed, being willing

to

to provide half the sum necessary to meet a grant from the Government of the other half.

It appears from the statements and plans of the Messrs. Stevenson that a harbour of an extent of above 20 acres, with a depth at the entrance, at the lowest tides, of about 14 feet, which could be increased to 16 or 17, and inside of from 14 to 19 feet over a portion of its extent, could be made for a sum of 44,000 *l.* The breakwater forming it would have a substantial construction of masonry to the depth of low-water level.

The advantages of such a harbour to the very large fishing interests of Wick and its district cannot be overrated. There is no harbour at present between Orkney to the north, and Cromarty to the south, in which the smallest boat can take refuge during a gale at low water, and even during the summer herring fishing the danger is very great, as the losses of 1847, and Captain Washington's Report on them, will show.

In the district of Wick alone, about 1,000 boats and 5,000 men are out every night; and knowing that it is only at certain times of tide that they dare run for the harbour during a gale, they often have to sacrifice a portion, or even the whole of their nets, when bad weather is coming on, as they dare not wait to get them in, for fear of the tide falling too low before they reach their harbour.

With such a harbour of refuge as that proposed at Wick under their lee, they would hold on to their nets to the last rather than lose them. The loss of nets has again been great this season in the gale of the 21st August.

But this want of such a harbour is equally felt, though by a smaller number of fishermen, during the winter season. There are excellent line fishing grounds off the coast, which are now of little benefit to the population, compared to what they would become if a good harbour to run for were within reach.

The advantages of such a harbour as that proposed to the coasting trade would also be very great. The increasing export trade of herrings alone brings a larger number of vessels to that part of the coast, and they can only enter the different harbours during fine weather at high water.

The large fishing interests at Wick would also be greatly benefited by the increased space the harbour would give for landing and curing fish.

To provide for this in the new harbour would make a considerable outlay necessary beyond the sum required for making the breakwater, but that outlay would be one that ought entirely to be borne by the Fishery Society.

There would be a considerable national benefit obtained by such a harbour as that proposed, as, in addition to the want of a place of refuge for the coasting trade, the want of any port in which even small vessels of war could lie, might be much felt in the event of our being engaged in hostilities with a naval power. We therefore beg to strongly recommend this case to the consideration of Her Majesty's Government. We do not pretend to give an opinion on the engineering question or on the estimates of construction, but we have no hesitation in saying, that if it should be ascertained that by a grant of 22,000 *l.* such a harbour could be obtained, it would be one of the best outlays of the kind ever made by the Government.

It would be necessary in making such a grant, strictly to bind the society to complete the work at their own cost, should the expense exceed the estimated sum.

It is scarcely necessary to add, that we consider any grants made either for Wick Harbour, or for other large works of similar character, should be special grants beyond the annual sum of 6,000 *l.*

B. J. Sulivan.
B. Price.
Fred. St. John.

Having now reviewed the functions of the Board, we proceed to discuss its marine department as an instrument for carrying out a portion of its duties.

We have shown above that a certain amount of superintendence as well as of assistance to the fishermen is provided on the west coast by the cutter and

her boats, and by the boat stationed at Skye during the herring season, and we have expressed the opinion that the cutter is an expensive machine for the work now assigned to her; she could not, however, be removed without providing a substitute; and the question at once arises, whether the Board requires a vessel, or whether some arrangement of boats would suffice. To this question we unhesitatingly reply, that a vessel of some kind is, in our opinion, indispensable for the operations of the Board. We agree in the view taken by Mr. Lefevre in his Report of 9th July 1849, of the need of an "authority afloat" for the Board. Without a vessel, it would be no real Board for piers and harbours, such as we have described it, particularly on the west coast of Scotland, but an office only at Edinburgh, or little more. The essence of the Board's action consists in the contact of the secretary with the local population, whether gentry or fishermen. He it is, for the chief part, who awakens them to the capabilities they possess for successful fishing, who points out the works necessary to achieve it, and by his influence draws money from them to meet the grants from the Government. Without his presence on the spot, the Board becomes comparatively powerless. Now, the Highlands and Islands present an immense length of coast which is peculiarly inaccessible. Most parts of it cannot be reached by land; by sea, the ordinary conveyances for passengers touch but at few points, commonly after long intervals of time and for short portions of the year. It abounds in creeks and lochs, the natural haunts of fishing; but these are visited by no passenger vessels, and offer no resting-place to a traveller. Often, as we have ourselves noticed, these small harbours are not known at a short distance from their own locality. The population at these remote places is often, it is true, most scanty; but this furnishes no proof against the possibility of developing fisheries in them. It is a peculiarity of the west coast, which distinguishes it from the east, that fishing smacks are there substituted for curing yards on shore. These smacks go round with their fishing boats to any spot where herrings are to be found, and by their means a fishing may spring up at any moment in the most lonely regions. On the construction of some sheltering harbour for these small vessels, or the erection of a pier at which a steamer might load fish, the existence of a fishing may easily turn. Without a vessel, no secretary or other representative of the Board would have the means of inspecting or staying in these districts, studying their capabilities, discussing with the fishermen, or obtaining contributions from the spot. Without a vessel, the all-powerful influence of personal communication would be, to a great extent, lost. To deprive the Board, therefore, of a vessel altogether would, we conceive, be to declare that it had no work to do in the Highlands or Islands of Scotland, or to distrust its willingness to perform it. Had we entertained either of these beliefs, we should have proposed the withdrawal of the west coast from the charge of the Board, and have endeavoured to devise some other machinery for supplying its wants. But, on the contrary, having confidence in the Board, and recommending its continuance, we must beware of paralysing it for one-half of the task assigned to it. Without a vessel, we cannot doubt that large tracts of the west coast must be and would be practically abandoned by the Board.

It may be said, if all this is so, why has the cutter not been employed on this service before now? We have ourselves addressed this inquiry to the secretary. He replies that the cutter has been actually thus employed at various times; that the grant from Parliament, being small, allowed only of one or two works being undertaken at once; that during his time, it has been expended chiefly on works of magnitude on the eastern and southern coasts; and that the cutter being charged with increased police duties by the naval superintendents of the west coast being reduced, and the Trawling Act of 1851, was confined to certain sections of the coast during much of the season, and could not be used with the same ease as formerly, or as a vessel which could be freed for a time for this service.

We believe these representations to be well founded; but we cannot think that they reach the full length of showing that greater use could not have been made of the cutter. On the other hand, the repeal of the Trawling Act would greatly enlarge the freedom of the Board's vessel; and still more the doubled grant for piers and harbours, if adopted by Parliament, whilst furnishing the means, would increase the duty of providing for the wants of the west coast.

But

But it may be further urged that the claims of the east coast are paramount as compared with those of the west; that there life and property are exposed to the gravest dangers; that the amount of wealth at stake is larger and needs more protection; whilst nature has spontaneously granted ready-made and safe harbours to the west. Hence it may be argued that but a small portion of the annual grant can be laid out on the west coast; and is it necessary for so trifling an object to keep up a special vessel for the service?

We feel the force of these considerations, but we cannot think that they warrant the inference which is drawn from them. The question is not, we conceive, whether a large or small sum will be laid out on the west coast, but whether the Board shall have the power of ascertaining its wants and providing for them, be they great or small; whether it shall be a Board for all or a part only of Scotland. The crowded and defenceless state of the eastern harbours and the extent of their trade, unquestionably give a decided precedence to their claims both as to urgency and amount. But on the other hand, it must be borne in mind that if property requires protection, it furnishes also some means for obtaining it. It is less dependent than poverty on the assistance of the national Government. The claims too of each coast are not identical in kind. The safety of life and property is the primary, but not the exclusive object of a Government's care. The extension of civilisation to remote and helpless districts by connecting them with the rest of the empire by means of steamers and piers; the improvement of communications where the local resources are insufficient to construct them; the giving facilities for trade to a poor population, when there is a reasonable hope of their profiting by them, are secondary, indeed, but still, in our opinion, real duties devolving on a central Government; and if so, where can a greater contrast be found than between the western regions of Scotland and the remainder of the kingdom? Where can the call for enlightened and moderate aid be clearer?

If the service for piers and harbours on the west coast were alone to be taken into account, a special steamer hired from time to time might perhaps be the cheapest, but we think would not be the most convenient and available conveyance for the Board. But its marine department is responsible for other duties besides this service; and we are convinced that the most economical and efficient arrangement will be found by framing a machinery which shall satisfy all its naval requirements collectively. The work which the Board has to do on the water is very miscellaneous. It is broken into bits, as it were; no single portion occupying the whole year. The fishing with its superintendence is ever shifting ground with the seasons; it is now off Stornoway, now on the Ayrshire coast, and then ceases for awhile altogether. The cutter's station is ordinarily on the west; yet she has done much active work on the east, and has often been busy in the Firth of Forth. The uses therefore to which the Board has to apply its vessel being manifold, the most natural and cheapest plan seems to be to furnish it with a naval machinery sufficiently flexible to meet the varying wants of the service as they arise.

The cutter, with her crew of 20 men, and costing, with the salary of her captain, 2,000 *l.* a year, is too expensive for her present work. In her stead, two yawls, or decked boats, have been proposed for police duty and giving help to fishermen, to be stationed off Skye, and in Loch Fyne. Besides being insufficient in furnishing no substitute for the useful work done by the cutter's boats in rowing about among the fishing, they seem to us to labour under the same impediment with the cutter, in being prevented by police duties at particular places from carrying on the service for piers and harbours efficiently. Their annual cost, too, would be considerable, being estimated, we understand, at 800 *l.* a year for the two; an additional sum would be required for travelling expenses connected with harbours, carriage of materials, and other services, which would be performed by a vessel more freely available for this special duty.

The secretary of the Board has expressed to us his confident belief that for 1,200 *l.* a year, supposing the duty of watching against trawlers to be suppressed, a small vessel with a small crew, but capable of doing the work for piers and harbours thoroughly, and five independent boats of various sizes for police and general duty, could be maintained. Such an expenditure would effect a saving of 800 *l.* a year on the present establishment of the cutter, and we doubt very much whether it would exceed the outlay for the yawls and the other items

mentioned above. Its superiority over them in efficiency, for enabling the Board to discharge all its duties satisfactorily, and in real economy, seems to us decisive. Such a vessel, with the boats, could easily be made to perform the duty for police and statistics, now carried out by the nine officers of the west coast, whereby a second saving of 1,100 *l.* a year would be achieved; and there is reason for believing, too, that the same machinery might perform the winter duties of the Admiralty steamer, so as to liberate that vessel for six months in the year, and thus a third saving, estimated at upwards of 2,000 *l.* a year, would be obtained.

This scheme has not been formally laid before us, and we are unable to pronounce a final and positive opinion respecting it, but we are satisfied of its sound character generally, and of its fitness to make efficient and economical provision for the naval wants of the Board. And we beg further to express our conviction, that if my Lords concur in the expediency of granting a vessel to the Board for piers and harbours, the experience and local knowledge of that Board will enable them, with the sanction of the Treasury, to frame such a plan (whether that above described, or some other founded on the same principles) as shall effect a considerable reduction on the sum now voted to the marine department, and make the vessel much more useful than heretofore in raising local contributions, and promoting the extension of piers and harbours.

The boat at Wick, under the command of a petty officer from the cutter, with a crew hired for the season, is not employed outside of the harbour, and entails an annual charge of 35 *l.*, which seems to us to belong to the authorities of the harbour rather than to the Board. We beg to recommend its discontinuance for the future.

(signed) *Bonamy Price.*
Frederick St. John.

4 November 1856

Unto the COMMISSION of INQUIRY into the FISHERY BOARD, *Edinburgh.*

The Petition of the undersigned Shipmasters, Fish Curers and Fishermen at Portree, Scalpa Sound, &c., in the Isle of Skye,

Humbly sheweth,

THAT your petitioners have felt no small degree of anxiety of late, in perusing the public prints, to observe efforts made in some quarters for the suppression of the Fishery Board, and more especially a Minute of the Treasury purposing its abolition. Your petitioners, however, are much gratified to observe that Government have appointed your Honors to investigate into the whole matter, convinced as they are that an impartial inquiry is all that is needed to establish it even on a more firm basis.

Your petitioners have been engaged in fishery pursuits all their lifetime, and, with few exceptions, have no other occupation; and being hitherto accustomed to carry all their complaints and grievances (which are of daily occurrence) to those appointed by the Board to superintend their excellent system of police in this quarter, feel alarmed at the idea of its suppression, knowing, as they do, that things will speedily get into anarchy and confusion.

Your petitioners also are persuaded that the fishing here would be entirely spoiled if there was no control over the setting of nets too early; that to place the police superintendence of the fisheries under the Board of Admiralty will not work; your petitioners have had positive proof of this; the very position of naval officers places a barrier between our native fishermen and them that cannot be overcome; on the contrary, the Board has a vessel of its own, under a patient and painstaking commander, who has spent the better part of his days in this duty, to whom even the meanest of our fishing population can carry his complaints with confidence. This also we would say of all the Board's officers, who are all practical men, knowing fishery matters thoroughly.

Your petitioners lately read, with no small degree of surprise, a statement made in the Wick Chamber of Commerce, that the west coast fishing only commenced when theirs was over, and that two supernumerary officers might then be sent to the west. Such a statement naturally would lead any one unacquainted with facts to conclude that the fishing on the west coast was of little value, while the fact is, that, not to speak of the Stornoway fishing, now over, and the Lochfine fishing, now going on with vigour, there have been taken before the east coast fishing commenced, here alone, not fewer than 13,000 barrels of prime herrings, by upwards of 400 boats, and sold at prices from 20 *s.* to 35 *s.* per cran.

Your petitioners fondly hope that your Honours may pay them a visit, and see upon the spot the importance of the west coast fishing, and the necessity of maintaining the Board with all its powers, and rather add to than diminish them.

May it therefore please your Honors to consider the evil that would be entailed on your petitioners to break up a system that has hitherto wrought so well,

And your petitioners will ever pray.

Messrs. *John Lockhead* and *James Chalmers,* Fish Curers, now at Portree.

Gentlemen, Mossbank, Portree, Skye, 29 July 1856.

I HAVE read with much attention the petition which you have brought to me, intended to be transmitted by the shipmasters, fish curers, and fishermen at Portree, Scalpa Sound, and other places in this island, to the Commissioners appointed to inquire regarding the expediency of maintainingthe Fishery Board.

I do

I do not think it necessary to enter into the statements in that document, which I observe is signed by many persons whose interest in and means of judging regarding the question are well known to me, further than to say,—1st. That the great importance of the herring fishery to this part of the country can scarcely be exaggerated; 2dly. That it appears to me essential to the welldoing of the fishery that a proper supervision and police regarding it be maintained, and that that supervision and police can scarcely be more efficiently maintained than by officers, such as those of the present Fishery Board, whose exclusive business it is to attend to the herring fishery business, and whose position is such as to give them the confidence of and due influence over those connected with the fishery, without placing any difficulty of communication between them; and 3dly. That I believe the statement in the petition, regarding the importance of the west coast herring fishing, and its taking place earlier in the season than the east coast fishing to be perfectly well founded.

Whether the system of supervision and police to which I have adverted as essential to the welldoing of the herring fishery on this coast could, or could not, be equally well provided for under the Board of Admiralty as under the Fishery Board, I do not take upon myself to say; but I am quite satisfied that it could not be managed by a magistracy on shore; and from all I have seen and heard, I believe it to have been well managed by the present officials.

I hope, as you do, that the Honourable Commissioners to whom the petition is addressed will be of opinion that a visit to the coast while the fishing here is in progress will be a necessary and proper step in the course of their investigation.

I have, &c.
(signed) *J. Fraser,*
Sheriff-Substitute of Skye.

Liverpool, 23 October.

To the Chambers of Commerce of *New Orleans, Mobile, Charleston,* and *Savannah,* and to all concerned in the Cotton Trade of the United States.

The magnitude and importance of the commerce of Great Britain with the United States in the article of cotton is sufficiently known, and to those who are acquainted with the details of the trade, it is a matter of satisfaction that the machinery by which the distribution of so enormous a quantity of material is effected has, up to this time, worked so smoothly, owing to the honourable character of all concerned, from the planter to the manufacturer.

But in order to sustain the character of the trade, and to retain the mutual confidence which has hitherto existed, it is essential that every sample of cotton offered in the market should fairly represent the quality of the bulk from which it is taken, as every deviation from this rule tends to create distrust.

Of late, however, so many instances of careless packing have occurred, causing a discrepancy between the sample and the bulk, that serious loss has been sustained, both by the manufacturer and the merchant, and it has become a duty to call the attention, not only of the American planters and factors, whose reputation is thereby injured, but also of the trade generally, to the present growing increase in the proportion of irregular and false packed bales, and to invite their serious consideration of the evils which must inevitably follow the continuance of the practice, and to solicit their assistance in checking it.

In most cases, the irregular packing is only discovered when the bale has reached its ultimate destination and is opened by the manufacturer, and the trouble, cost, and inconvenience of repacking and returning the bale, and the trouble and difficulties which attend a prosecution of his claim, have frequently induced him to bear the loss in silence. Similar reasons have prevailed with the merchant to suffer the loss resulting from such cotton, returned by the manufacturer, rather than resort to the tedious and often useless process of seeking redress against the planter abroad.

It is on this account that so few instances have occurred in which the real offender has borne the consequences of his neglect, and, presuming on this forbearance, the evil complained of has, from carelessness or otherwise, increased to such an extent, that in a large proportion of shipments arriving in Liverpool, instances of false or irregular packing are discovered, and occasionally whole parcels, consisting of 20, 50, and even 100 bales, are found mixed in the bale, and sometimes plated; in other words, the outer layer, from which the sample is taken, is more or less superior in quality to the interior of the bale.

It is hoped that all parties will see the urgent necessity of promptly co-operating to stop and remove this serious and increasing evil, which will otherwise disorganize the trade, and destroy that mutual trust and confidence without which such an extensive and important branch of commerce cannot be carried on.

Thomas Sellar, President American Chamber of Commerce.
Thomas Haigh, President Cotton Brokers' Association.

PREFATORY REMARKS

ON THE

RETURNS OF AGRICULTURAL PRODUCE

FOR THE YEAR 1855.

TO HIS EXCELLENCY GEORGE WILLIAM FREDERICK, EARL OF CARLISLE, K.G.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND, &c., &c., &c.

MAY IT PLEASE YOUR EXCELLENCY,

In the months of last September and October I had the honour to submit General Abstracts, showing, by counties and provinces, the total extent under tillage, and the quantity of live stock in Ireland in 1855; and in January last, tables of the estimated average produce of the crops of that year; I have now the honour to lay before your Excellency the usual tables, showing in detail the area under each description of crop, and the quantity of live stock; also the number of holdings, classified according to their size, in each barony and poor law union;—the number, power employed, and situation of mills for scutching flax; and tables exhibiting the extent to which weeds prevailed on farms and along the sides of public roads, railways, and canals :—

PART I.—TILLAGE.

TILLAGE.

Extent under Tillage.

The total extent under tillage in 1855 was 5,688,836 statute acres; being an increase of 118,226 acres compared with the previous year. Of the provinces, the greatest proportionate increase in 1855 appears to have taken place in Munster, and the least in Ulster; the acreage under tillage in 1854 and 1855, and the increase in the latter year are shown in the following summary for each of the provinces :—

	Extent of Tillage in 1854.	Extent of Tillage in 1855.	Increase. Between 1854 and 1855.	Increase. Rate per Cent.
	Acres.	Acres.	Acres.	
Leinster, . .	1,665,599	1,707,803	42,204	2·53
Munster, . .	1,379,024	1,429,879	50,855	3·69
Ulster, . .	1,811,496	1,816,016	4,520	·25
Connaught, . .	714,491	735,138	20,647	2·89
Total, .	5,570,610	5,688,836	118,226	2·12

The counties in which the greatest relative increase in the extent under tillage took place were Roscommon, Kildare, Clare, Kerry, Tipperary, and Cork; those which exhibited the least relative increase were Waterford, Longford, London-

Extent under Tillage.

derry, Down, and Armagh. The counties in which the area under crops increased in 1855, were as under :—

Counties.	Extent of Land under Crops.		Increase.		Counties.	Extent of Land under Crops.		Increase.	
	1854.	1855.	Extent.	Rate per Cent.		1854.	1855.	Extent.	Rate per Cent.
	Acres.	Acres.	Acres.			Acres.	Acres.	Acres.	
Antrim, .	230,853	236,748	5,895	2·55	Limerick, .	191,855	196,084	4,229	2·20
Armagh, .	170,110	171,766	1,656	·97	Londonderry,	173,284	174,337	1,053	·61

Dublin, .	106,007	108,805	2,798	2·64	Queen's, .	148,172	152,772	4,600	3·10
Galway, .	227,621	233,723	6,102	2·68	Roscommon,	129,225	137,756	8,531	6·60
Kerry, .	144,049	150,241	6,192	4·30	Tipperary, .	301,476	314,377	12,901	4·28
Kildare, .	139,947	147,636	7,689	5·49	Waterford, .	115,866	116,352	486	·42
Kilkenny, .	181,914	185,257	3,343	1·84	Westmeath,	124,495	128,950	4,455	3·58
King's, .	128,756	130,905	2,149	1·67	Wexford, .	244,587	247,416	2,829	1·16
Leitrim, .	82,625	84,779	2,154	2·61	Wicklow, .	118,184	120,031	1,847	1·56

Compared with 1854, Donegal, Fermanagh, Sligo, and Tyrone, are the only counties which showed a diminished area under tillage in 1855, and the diminution is not considerable ; the entire decrease on the total extent under crops in these four counties being only 10,735 in an extent of 704,947 acres, or in the ratio of one acre in every sixty-six. The acreage under crops in these counties in 1854 and 1855, was as follows :—

Counties.	Extent of Land under Crops.		Decrease in 1855.	
	1854.	1855.	Extent.	Rate per Cent.
	Acres.	Acres.	Acres.	
Donegal, . . .	232,353	228,436	3,917	1·69
Fermanagh, . .	106,084	104,280	1,804	1·70
Sligo, . . .	95,941	95,543	398	·41
Tyrone, . . .	270,569	265,953	4,616	1·71

The area under each crop for the years 1849 to 1855, is given in the following table :—

Crops.	1849.	1850.	1851.	1852.	1853.	1854.	1855.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Wheat, . . .	687,646	604,867	504,248	353,566	326,896	411,284	445,775

Increase or Decrease in extent under Tillage.

It will be observed that there was an increase in the entire extent under cereal crops in 1855 of 88,828 acres, compared with 1854. The increase in wheat was 34,491 acres; in oats, 73,560; and in rye, 266 acres; the remaining crops diminished to the following extent:—barley, 9,664 acres; bere, 5,735; beans, 1,643 acres; and peas, 2,447; leaving a net increase in the area under cereal crops, to the amount above stated. There was an increase of 37,783 acres in turnips, of 988 in mangel wurzel, and a decrease of 7,359 acres in potatoes, and of 2,518 acres in "other green crops;" leaving an increase of the total extent under green crops of 28,894 acres. There was a diminution of 54,328 acres of flax, 2,111 acres of rape, and an increase of 56,943 acres of meadow and clover. The acreage under crops in 1854 and 1855 is given by counties and provinces in the following table:—

Counties.	Extent of Corn, Beans, and Peas.		Potatoes.		Turnips, Mangel Wurzel, Beet Root, Carrots, and Parsnips.		Cabbage, Vetches, and other Green Crops.		Flax.		Meadow, Clover, and Rape.

Total,	2,743,736	2,832,564	989,660	982,301	358,552	397,613	56,306	53,498	151,403	97,075	1,270,953	1,325,785

It appears that in the counties of Carlow, King's, Limerick, Longford, Waterford, Wexford, and Wicklow, there was a decrease in 1855, compared with 1854, in the entire acreage under corn, beans, and peas—all the remaining counties showed an increase in these crops. Potatoes decreased in 1855 in the counties of Antrim, Armagh, Cork, Donegal, Fermanagh, Kilkenny, Leitrim, Londonderry, Longford, Monaghan, Queen's, Tipperary, Tyrone, Waterford, and Wexford; and increased in Carlow, Cavan, Clare, Down, Dublin, Galway, Kerry, Kildare, King's, Limerick, Louth, Mayo, Meath, Roscommon, Sligo, Westmeath, and Wicklow. Of the provinces, Leinster and Connaught show an increase in the extent under potatoes, and Munster and Ulster a decrease.

Increase or Decrease in extent under Tillage.

The total acreage planted with potatoes, in 1855, was 982,301, being 7,359 acres less than in the previous year, notwithstanding the fluctuations in the extent cultivated in each of the counties. Turnips, mangel wurzel, beetroot, carrots, and parsnips, taken together, show a diminished area in the counties of Cavan, Dublin, Kerry, and Limerick; this diminution, however, is very small, being only 872 acres less than in 1854, in which year 28,596 acres were under these crops in the counties named. Under this head there was a net increase in the remaining counties in 1855, of 39,061 acres,—equal to more than one-tenth of the entire extent cultivated in 1854.

The total acreage under cabbage, vetches, and "other green crops," exclusive of those before mentioned, increased in the counties of Antrim, Armagh, Carlow, Donegal, Kerry, Kildare, Kilkenny, Louth, Meath, Queen's, Tipperary, and Wexford, and diminished in the other counties. In Ireland there was in these crops a net decrease of 2,808 acres in 1855, compared with 1854, in which year the entire extent grown was 56,306 acres. Meadow, clover, and rape, taken together, increased by 54,832 acres, having had in 1854 an area of 1,270,953, and in 1855 of 1,325,785 acres.

In that important crop, flax, there was a considerable decrease in every county, except Carlow, Kildare, King's, Waterford, and Wexford, in which, taken together, the quantity grown is very small, amounting in 1854 to only 749 acres, and in 1855 to 1,212, being an increase in the latter year of 463 acres. The net decrease in the area under flax, in 1855, was 54,328 acres, equal to more than one-third of the crop grown in 1854. Donegal had a larger acreage under flax than any other county in Ulster; next in order was Tyrone, followed by Monaghan, Londonderry, Down, Armagh, Antrim, Cavan, and Fermanagh; in the province of Munster, Cork had a greater extent under flax than the northern county of Fermanagh.

During the last seven years—1849 to 1855—the largest extent of wheat, barley, bere, and rye, was grown in 1849; and in the same year, the least amount of potatoes, mangel wurzel, flax, and meadow and clover; 1852 gave the greatest, and 1854 the least breadth under oats; there was the largest acreage under beans and peas in 1850; under potatoes, in 1854; and under turnips, mangel wurzel, and flax, in 1853; last year (1855), there was the largest extent under meadow and clover. The cultivation of bere and rye has been diminishing rapidly since 1849, in which year the Returns gave 80,987 acres under these crops, whilst in 1855 there were only 22,817 acres. The cultivation of green crops has gradually increased from 1,167,639 acres in 1849 to 1,433,412 acres in 1855.

The returns for the last seven years show that there has been a tendency to diminish the cultivation of cereal crops, except in 1855, and gradually to increase the extent under "green crops," but especially the potato crop, from which it may be assumed that the disease which in 1845, 1846, and 1847, almost wholly destroyed it has so far disappeared as to give the farmers confidence in again growing it as a remunerative crop. This will appear from the following statement:—

Years.	Cereal Crops.	Green Crops.	
		Total Area.	Potatoes.
	Acres.	Acres.	Acres.
1849, . . .	3,174,424	1,167,639	718,608
1850, . . .	3,149,556	1,317,572	875,357

1852, . . .	2,976,606	1,335,483	876,532
1853, . . .	2,833,387	1,402,192	898,733
1854, . . .	2,743,736	1,404,518	989,660
1855, . . .	2,832,564	1,433,412	982,301

Extent under Flax.

The quantity of scutched flax grown in Ireland, in 1855, was 23,428 tons, being 12,178 tons less than in the previous year; the yield per statute acre,

according to the average rates of produce, was 38·6 stones, of 14 lbs., being one stone more to the acre than in the returns for the previous year. The acreage under flax in each county during the last six years, and the increase or decrease between 1854 and 1855, are shown in the following table :— Extent under Flax.

TABLE showing the breadth of flax cultivated in each county during the last six years, also the increase or decrease between 1854 and 1855 :—

Extent of Tillage on each class of Holdings.

The extent of each crop grown on the several classes of holdings in 1855 appears in the annexed table, from which it will be seen that in allocating the land for crops on the three classes of holdings: "Above 5 to 15 acres;" "Above 15 to 30 acres;" and "Above 30 to 50 acres;" about 53 acres in every 100 were under cereal crops; upwards of 41 per cent. of which, taking the average of these classes, is occupied by oats, the remaining portion being devoted to wheat, barley, bere, rye, beans, and peas; about 27 acres in every 100 were occupied by green crops, and 17 by meadow and clover. On farms "Above 50 to 100 acres," nearly one-half was under cereal crops, and upwards of one-fourth under meadow and clover, the remainder being allotted to potatoes, turnips, &c. In farms above 100 acres, about 42 acres in every 100 were under meadow and clover, 38 acres were occupied by cereal, and 19 by green crops.

Description of Crops.	Area under Crops on Holdings exceeding One Statute Acre.

Extent of Land held by each class of Landholders.

In 1855 the holdings returned by the enumerators amounted to 589,470; of which number, *one-half did not exceed* 15 *acres in extent.* The following table shows the number of holdings and the quantity of land occupied by each class; it will be seen that more than *one-half of the entire area* of the country is in the possession of farmers whose holdings vary from 5 to 100 acres in size, and that an almost equal extent of land under tillage and grass is held by each of the three classes whose farms are respectively from "15 to 30 acres," "30 to 50 acres," and "50 to 100 acres;" and that of the land held by persons whose farms exceed 200 acres,—amounting in the whole to 5,029,115 acres,—2,372,569 acres, or nearly one-half, is "Bog or Waste,"—471,939 only being under tillage, and 2,020,521 under grass.

Classification of Holdings.	No. of Holdings in each class.	Extent of Land held by each class of Landholders.	Division of Land.

Number and Classification of Holdings.

The total number of holdings in Ireland, as returned for each of the years from 1849 to 1855, in five classes, together with the proportion per cent., in each class, will be seen in the succeeding table. Since 1849, there has been a steady decrease in the relative number of holdings "above 1 and not exceeding 5 acres," and also in those "above 5 and not exceeding 15 acres;" those "above 15 and not exceeding 30 acres" varied very little in proportion during the years specified, but holdings above 30 acres increased from 24·1 per cent. in 1849 to 26·3 per cent. in 1855 :—

Years.	No. of Holdings not exceeding 1 Acre.	No. of Holdings above 1 Acre, and not exceeding 5 Acres.	No. of Holdings above 5 Acres, and not exceeding 15 Acres.	No. of Holdings above 15 Acres, and not exceeding 30 Acres.	No. of Holdings above 30 Acres.	Total.
1849,	31,989	98,179	213,897	150,120	156,960	651,145

Total,	294,117	297,018	2,901				
Deduct Decrease,	–	–	1,995				
Net Increase,	–	–	906				

The counties in which an increase in the number of cottiers would appear to have taken place were Dublin, Galway, Kerry, Kildare, Leitrim, Louth, Mayo, and Sligo; in the remaining counties a net decrease took place of 1,523 holdings in this class; it is to be borne in mind, however, in reference to holdings under 1 acre in extent, that as houses in villages having small gardens attached to them are included in this class; those houses which may be unoccupied during the period of one enumeration and tenanted the next, will make the number returned under this class fluctuate from time to time. The variations in 1855

Number and Classification of Holdings.

compared with 1854, in the number of holdings, not exceeding one acre in extent, are shown in the following table :—

Counties in which the No. of Cottiers has *decreased*.				Counties in which the No. of Cottiers has *increased*.

The number in each of the nine classes into which the holdings are divided, is shown in the following statement for each year, from 1851 to 1855; very little variation appears to have taken place in the classes "*above* 15 *and not exceeding* 500 *acres ;*" the greatest number of holdings in any of the classes is in that which includes farms "above 5 and not exceeding 15 acres," next in those "above 15 and not exceeding 30 acres," and 5 acres and under, after which, commencing with farms "above 30 and under 50," the number of holdings decreases as the size of the farm increases.

Classes of Holdings.	1851.	1852.	1853.	1854.	1855.
Not exceeding 1 Acre, ...	37,728	35,058	35,795	38,165	36,642
Above 1 and not exceeding 5 Acres,	88,083	81,561	79,418	80,976	81,281
„ 5 „ 15 „ .	191,854	182,308	178,701	179,140	178,794
„ 15 „ 30 „ .	141,311	139,136	138,864	137,640	138,183
„ 30 „ 50 „ .	70,093	70,079	70,297	70,821	70,849
„ 50 „ 100 „ .	49,940	51,389	51,764	52,512	52,720
„ 100 „ 200 „ .	19,753	20,436	20,774	21,026	21,116
„ 200 „ 500 „ .	7,847	8,044	8,117	8,167	8,243
500 Acres and upwards, . . .	1,457	1,460	1,619	1,640	1,642
Total, including Holdings "not exceeding 1 Acre," .	608,066	589,471	585,349	590,087	589,470

It will be interesting to consider the changes which have taken place in the number of holdings since 1841 ; a statement is therefore subjoined, showing the number of farms in Ireland in that year, as given in the Report of the Census Commissioners, and the number in 1855 :—

Classes.*	Number of Holdings in 1841.	1855.	Increase in 1855.	Decrease in 1855.
Above 1 to 5 Acres, .	310,436	81,281	—	229,155
„ 5 to 15 „ .	252,799	178,794	—	74,005
„ 15 to 30 „ .	79,342	138,183	58,841	—
„ 30 Acres, . .	48,625	154,570	105,945	—
Total, . .	691,202	552,828	—	138,374

It will be seen from the foregoing that a very great diminution in the number of the farms above 1 and under 15 acres in extent has taken place since 1841—upwards of 80 per cent. of the whole having been then returned under that class —whilst in 1855, the proportion of farms of that size to the total number was only 47 per cent. The general decrease in the number of farms from 1841 to 1855 amounted to 138,374; the arable land at these periods having been—in 1841, 13,464,300 acres; in 1855, 15,309,003 acres—showing that, notwithstanding a diminished number of holdings, and a large decrease of population, there was a considerable increase in the extent of arable land between 1841 and 1855.

* The classification of holdings in 1841 did not extend beyond 30 acres, and did not include "bog or waste."

Number and Classification of Holdings.

The number of holdings in each of the nine classes, is shown in the following table, for each county and province in 1854 and 1855; it will be seen that there has been an increase under every class, except in holdings "not exceeding 1 acre" in extent, and in those "above 5 and not exceeding 15 acres:"—

Counties.	No. and Classification of Holdings.																	
	Not exceeding 1 Acre.		Above 1 and not exceeding 5 Acres.		Above 5 and not exceeding 15 Acres.		Above 15 and not exceeding 30 Acres.		Above 30 and not exceeding 50 Acres.		Above 50 and not exceeding 100 Acres.		Above 100 and not exceeding 200 Acres.		Above 200 and not exceeding 500 Acres.		Above 500 Acres.

Connaught,	6,171	6,703	16,507	16,663	46,164	46,152	29,602	30,779	10,337	10,370	6,227	6,157	3,140	3,142	1,790	1,781	552	560
Total,	38,165	36,642	80,976	81,281	179,140	178,794	137,640	138,183	70,821	70,849	52,512	52,720	21,026	21,116	8,167	8,243	1,640	1,642

The largest increase in the number of holdings took place in the class "Above 15 and not exceeding 30 acres;" in 1855 there were 543 more farms of this size than in 1854; the next largest increase was in those "above 1 and not exceeding 5 acres," which were 305 more than in 1854; in holdings "above 50 and not exceeding 100 acres" there was an increase of 208; in those "above 100 and not exceeding 200," an increase of 90; in farms "above 200 and not exceeding 500," an increase of 76; in those of between 30 and 50 acres in size, an increase of 28; and in those "above 500 acres" an increase of 2 only.

In the number of farms *above* 100 *acres in extent*, Antrim showed a *decrease* of 25 in 1855, compared with the previous year; Armagh, of 1; Cork, 11; Fermanagh, 3; Kerry, 34; Mayo, 25; Sligo, 71; and Tipperary and Wexford, of 7 each. The following counties showed an *increase* in farms of that size:—

Galway,	74	Westmeath,	20	Tyrone,	8	Londonderry,	4
Clare,	53	Wicklow,	13	King's,	8	Kilkenny,	3
Waterford,	33	Queen's,	12	Longford,	6	Roscommon,	3
Donegal,	31	Kildare,	9	Louth,	6	Carlow,	1
Limerick,	26	Down,	9	Cavan,	4	Meath,	1
Leitrim,	20	Dublin,	8				

Of the provinces, Leinster showed an increase of 80, Munster 60, Ulster 27, and Connaught of 1, in the number of farms above 100 acres in extent.

Average Rates of Produce.

The following are the *average* rates of produce, per statute acre, of the crops in

Average Rates of Produce.

1855, ascertained from residents in the several districts by the officers of Constabulary, as in former years. In order to test the accuracy of these rates, I endeavoured to procure the assistance of the Boards of Guardians, but, I regret to say, that from only a small number of Electoral Divisions, 199 out of 3,439, were returns received; as stated, however, in the observations made by me, in January last, when submitting the tables of estimated produce for 1855, "this seeming "indifference on the part of the Guardians to fill up these forms may be owing to "the general confidence placed in the correctness of the returns made by the "officers of Constabulary;" in support of which opinion, I then gave copies of two letters received by me from the Clerks to the Guardians of the Poor Law Unions of Drogheda and Urlingford, expressive of their reliance on the returns made by the Constabulary, and giving it as their belief, that such returns "can only be conveniently and effectively obtained through that body;" and as regards the former Union, the information rendered by the Constabulary, relative to agricultural produce, was stated to be "correct."

In 1855, the highest rate of produce, per statute acre, of wheat, oats, turnips, and mangel wurzel, was returned for the province of Ulster; of barley, bere, potatoes, flax, and hay, for Connaught; of rye, beans, and cabbage, for Leinster; and of peas for Munster—which province, according to the returns, gave a less yield, per statute acre, than any of the others, of wheat, oats, barley, potatoes, turnips, and cabbage;—of hay, the same average rate per acre (2 tons) was returned for Leinster, Munster, and Ulster.

The average rates of produce of the principal crops, per statute acre, for each year from 1847 to 1855, is given in the following summary for all Ireland :— Average Rates of Produce.

	1847.	1848.	1849.	1850.	1851.	1852.	1853.	1854.	1855.
Wheat, per brl. of 20 stones,	6·6	4·5	5·3	4·4	5	5·5	5·8	5·9	5·7
Oats, per barrel of 14 stones,	8·4	7·6	7·6	7·7	7·9	8·2	7·9	8·8	7·8
Barley, per brl. of 16 stones,	8·7	8·4	8·4	8·9	8·8	9·1	9·3	9·3	8·7
Potatoes, per brl. of 20 stones,	57·7	31	44·7	36·6	40·9	38·7	51·1	40·9	50·8
Turnips, tons, . . .	15·5	14·3	16·1	15·7	15·9	15·9	16·4	15·8	16·6
Mangel Wurzel, tons, . .	18·0	17·5	18·5	17·9	18·0	18·1	17·7	17·2	18·0

It will be seen that in 1855 the average yield of the wheat crop, per acre, was somewhat under that in 1853 and 1854; but, taking the total produce of the crop, as shown in the succeeding table, there was a greater supply in the country than in either of the former years, owing to a larger acreage; oats and barley decreased in total quantity and in rate of yield, but potatoes showed a greater produce per acre than in 1854, and a larger general yield than in 1853 or 1854; turnips and mangel wurzel gave a larger quantity per acre, as well as a greater total produce, than in 1854. On the principal crops there was a falling off in the total yield of cereals,—compensated by an increase in the produce of green crops :—

Years.	Wheat. Barrels, 20 Stones.	Oats. Barrels, 14 Stones.	Barley and Bere. Barrels, 16 Stones.	Potatoes. Barrels, 20 Stones.	Turnips. Tons.	Mangel Wurzel. Tons.

1855, .	2,554,813	16,425,109	2,069,330	49,882,251	6,073,598	402,958

The Union which produced the largest quantity of corn, beans, and peas, was Downpatrick, which grew 44,571 tons of these crops :—that which had the smallest amount of them was Castletown (Co. Cork), which yielded only 1,052 tons. The greatest average amount of corn, beans, and peas, to each inhabitant (according to the population of 1851), was grown in the Union of Ardee, which produced 1,639 lbs. per individual. Of potatoes the largest quantity was grown in the Unions of Armagh and Ballymena, and the least in those of Ballyvaghan and Kilmacthomas; the greatest amount of potatoes grown per head; to the population of 1851, was in the Union of Swineford, which produced an average of 339 stones to each individual; Mohill was next highest, having produced 302 stones per head; Antrim gave 299 stones per head, and Ballina and Strokestown 287 each; Kilmacthomas grew only 59 stones of potatoes to each inhabitant.

The county which produced the largest quantity of corn, beans, and peas, in 1855, was Cork. Down shows the next highest quantity, followed in order by Tyrone, Wexford, and Tipperary. Wexford produced the greatest average number of lbs. to each of its population, followed by Louth, Kildare, Meath, Kilkenny, and Down; each of these counties giving an average of more than 1,000 lbs. of corn, beans, and peas, to each inhabitant; Kerry produced only 270 lbs. to each person. The average for all Ireland was 680 lbs. of corn, beans, and peas, to each individual. The greatest quantity of potatoes was grown in Mayo, Galway, Antrim, and Down; and the least, in Wicklow, Waterford, Carlow, and Dublin. Roscommon, in 1855, gives the largest average quantity (253 stones) per head to its inhabitants; followed by Mayo (251 stones); Leitrim (248 stones); and Antrim (232 stones) Waterford had the least quantity of potatoes per head, the average being only 71 stones. Wicklow had 87; Wexford, 91; and Dublin, 95 stones of potatoes, on an average, for each individual. The average for all Ireland was 152 stones of potatoes to each inhabitant,—calculated on the population of 1851.

When computing the average produce per head, in the two following tables, the population of the towns of Belfast, Cork, Dublin, Galway, Kilkenny, Limerick, and Waterford, has been *excluded* from the calculation; the general total at foot of the county table, however, shows the quantity of food produced to each person in Ireland.

Average Rates of Produce.

The tons of corn, beans, and peas, and the number of barrels of potatoes produced in the several Poor Law Unions, and the average quantity of food to each individual, computed upon the population of 1851, are shown in the following table:—

Poor Law Unions.	Population in 1851.	Produce of Corn, Beans, and Peas, in 1855.		Produce of Potatoes in 1855.		Poor Law Unions.	Population in 1851.	Produce of Corn, Beans, and Peas, in 1855.		Produce of Potatoes in 1855.

PART II.—STOCK.

Number and Description of Live Stock.

In 1855 there were in Ireland 556,287 horses, showing an increase of 10,358 above the number returned in 1854; 437,108 were two years old and upwards, 53,600 one year old and under two, and 65,579 under one year old. There were 19,857 mules, and 151,742 asses, returned by the enumerators, being an increase of 1,256 of the former, and 1,166 of the latter, compared with the numbers in 1854. In horned cattle of all ages there was a net increase of 66,499; the numbers being in 1854, 3,497,901, in 1855, 3,564,400; those of two years old, however, decreased 27,322, and yearlings 3,195 under the numbers in 1854, while cattle above the age of two years increased by 97,016. There were 3,602,342 sheep in 1855, and 3,722,219 in 1854, being a decrease of 119,877 in 1855, the decrease affecting all ages. The gross number of pigs in 1854 was 1,342,549, in 1855 it was 1,177,605; there was an increase in the latter year of 2,830 in those one year old and upwards, but a decrease in those under one year of 167,774, leaving a net diminution in the number of pigs of 164,944. Goats and poultry also decreased; the former being 27,522, the latter 263,859, under the number returned in 1854.

The changes in the number of each description of live stock, between 1854 and 1855, were as under:—

Description of Stock.	Number in 1854.	Number in 1855.	Increase in 1855.	Decrease in 1855.
Horses:				
Two years old and upwards,	434,363	437,108	2,745	—
One year old and under two,	49,536	53,600	4,064	—
Under one year,	62,030	65,579	3,549	—
Total No. of Horses,	545,929	556,287	Total Increase. 10,358	
Mules,	18,601	19,857	1,256	—
Asses,	150,576	151,742	1,166	—
Cattle:				
Two years old and upwards,	2,217,699	2,314,715	97,016	—
One year old and under two,	597,661	570,339	—	27,322
Under one year,	682,541	679,346	—	3,195
Total No. of Cattle,	3,497,901	3,564,400	Total Increase. 66,499	
Sheep:				
One year old and upwards,	2,503,930	2,496,171	—	7,759
Under one year,	1,218,289	1,106,171	—	112,118
Total No. of Sheep,	3,722,219	3,602,342	Total Decrease. 119,877	
Pigs:				
One year old and upwards,	336,401	339,231	2,830	—
Under one year,	1,006,148	838,374	—	167,774
Total No. of Pigs,	1,342,549	1,177,605	Total Decrease. 164,944	
Goats,	311,492	283,970	—	27,522
Poultry,	8,630,488	8,366,629	—	263,859

The number of live stock in Ireland, in the years 1841, 1849, 1850, 1851, 1852, 1853, 1854, and 1855, is given in the following table:— Number and Value of Live Stock.

Years.	Horses and Mules.	Asses.	Cattle.	Sheep.	Pigs.	Goats.	Poultry.
1841, .	576,115	92,365	1,863,116	2,106,189	1,412,813	No Return.	8,458,517
1849, .	548,288	117,939	2,771,139	1,777,111	795,463	182,988	6,328,001
1850, .	548,719	123,412	2,917,949	1,876,096	927,502	201,112	6,945,146
1851, .	543,312	136,981	2,967,461	2,122,128	1,084,857	235,313	7,470,694
1852, .	545,900	144,120	3,095,067	2,613,943	1,072,658	278,444	8,175,904
1853, .	561,100	148,720	3,383,309	3,142,656	1,144,945	296,182	8,660,738
1854, .	564,530	150,576	3,497,901	3,722,219	1,342,549	311,492	8,630,488
1855, .	576,144	151,742	3,564,400	3,602,342	1,177,605	283,970	8,366,629

By placing a monetary value on the live stock in the hands of the several classes of holders in 1854 and 1855, the increase or decrease in the *average* value of stock on each holding may be ascertained. Assuming the rates used by the Census Commissioners of 1841, the value of stock in Ireland in 1855 may be set down as £33,679,731, being an increase above the value in 1854 of £171,360. These rates were as under:—

	£	s.	d.	
Horses and Mules, at	8	0	0	each.
Asses, ...	1	0	0	„
Cattle, ...	6	10	0	„
Sheep, ...	1	2	0	„
Pigs, ...	1	5	0	„
Poultry, ...	0	0	6	„

The above prices include animals of all ages. There was not any value placed on goats in 1841—their number was not then taken; they are now set down at 7*s.* 6*d.* each.

The *average* value of stock per holding in 1855 increased in every class except in holdings under 5 acres in extent, and in those above 200 and not exceeding 500 acres.

The following table shows the value of live stock possessed by *each class* of land-holders in 1854 and 1855, and the average value per holding in each of these years:— Value of Live Stock on each class of Holdings.

Classes of Holdings.	1854.			1855.		
	No. of Holdings.	Value of Live Stock.	Average Value per Holding.	No. of Holdings.	Value of Live Stock.	Average Value per Holding.
		£	£ s. d.		£	£ s. d.

PART III.—SCUTCHING MILLS.

Scutching Mills.

The number of Mills for Scutching Flax, as returned by the enumerators, in 1855, was 1,107, being an addition of 7 to those in 1854; of these, Ulster contained 1,064, Leinster 18, Munster 17, and Connaught 8. The counties which showed an increase or decrease in the number of these Mills in 1855 were as under:—

	Increase.		Decrease.

The names of the townlands, parishes, baronies, and counties in which the above Mills are situated, are given in the general tables, commencing at page 203.

PART IV.—WEEDS.

Weeds.

The usual Returns, with regard to the prevalence of Weeds on farms and road sides, having been collected in 1855, I subjoin a table, showing, by provinces, the extent to which weeds were permitted to grow in that year compared with 1854. The proportions were obtained by stating what extent of the townland was in the *first*, *second*, *third*, or *fourth* class, as regarded the prevalence of weeds upon it. Those townlands kept generally free from weeds were entered as in the *first* class; those on which weeding was only partially attended to, were put down as in the *second* class; where weeds were permitted to grow, with but very little attempt to remove them, in the *third* class; and where their removal was entirely neglected, the townlands were entered as in the *fourth* class.

Provinces.	Farms.								Road Sides, &c.							
	1st Class.		2nd Class.		3.d Class.		4th Class.		1st Class.		2nd Class.		3rd Class.		4th Class.	
	1854.	1855.	1854.	1855.	1854.	1855.	1854.	1855.	1854.	1855.	1854.	1855.	1854.	1855.	1854.	1855.
Leinster,	40	42	27	26	15	15	18	17	25	23	16	16	9	9	50	52
Munster,	23	23	25	23	20	22	32	32	17	14	17	13	9	11	57	62
Ulster,	23	23	24	25	20	20	33	32	18	17	25	23	17	15	40	45
Connaught,	14	15	20	21	22	21	44	43	14	8	16	10	9	7	61	75
Ireland,	25	26	25	24	19	19	31	31	18	16	19	16	11	11	52	57

It is gratifying to observe, that on farms there is an increase of even 1 per cent. in the proportion of the area of Ireland stated to be under the *first* class, from which the weeds were removed; the second class shows a diminution of 1 per cent. removed to the *first* class; and the third and fourth classes remain in the same proportion as in the previous year. On road sides, I regret to say, the

returns exhibit a very backward tendency compared with 1854, as there is an increase in the proportion of 5 per cent. in the fourth or worst class, caused by a falling off in the *first* and *second* classes. Weeds.

The information collected in reference to the general state of the country, as regards the prevalence of weeds, is given at page 223; and, in the following table, the counties are arranged in the order in which it would appear, from an analysis of the returns, the removal of weeds from farms and road sides, &c., was best attended to, as shown by the proportion per cent. of the area of each county in the *first* and *second* classes, or those upon which the eradication of weeds was best attended to:—

	Total of Ireland,	50	Total of Ireland,	50		Total of Ireland,	37	Total of Ireland,	32

It will be observed that, in all Ireland, the proportion per cent. of farms in the first and second classes was the same in 1855 as in 1854; in the provinces, Leinster and Ulster show an increase of 1 per cent. each; and Connaught, of 2 per cent.; whilst Munster shows a decrease of 2 per cent. in the proportion under these classes. Of the counties, Dublin and Meath continue to hold their position, not only being the two counties first in order, but also having each increased 3 per

Weeds.

cent. in the area upon which the removal of weeds was attended to. Wexford, which was third on the list in 1854, has fallen to be sixth in 1855, having decreased in the proportion of its farms, in the first and second classes, by 6 per cent. The counties of Down, King's, Cork, Tyrone, and Clare, also appear to have lost their position in the table by a decrease in these classes. The counties of Carlow, Queen's, Antrim, Longford, Wicklow, Galway, and Kerry, remain as in 1854. Increased attention to the removal of weeds from road sides, &c., would appear to have taken place, in 1855, in the counties of Dublin, Armagh, Kildare, Kilkenny, Londonderry, Waterford, Monaghan, and Longford; the other counties show a falling off in this respect. It is hoped, however, that public attention having been called to the subject, each year will hereafter show an improvement in both the farms and road sides of Ireland, as regards the removal of weeds, the importance of which, to the farming classes, must be universally admitted.

Conclusion.

In conclusion, I have the satisfaction of stating to your Excellency that the particulars required for these Statistics continue to be freely communicated to the Enumerators; in very few instances has any disinclination to afford the information been exhibited: in such cases, an explanation of the object of procuring it, and an appeal by me to the good feeling of those who were averse to the collection of the Returns, have had the desired effect of removing the objections which existed; and I trust that each succeeding year prejudices unfavourable to these agricultural inquiries will diminish, and their utility be more and more appreciated by the community.

It only remains that I should here repeat my obligations to the magistracy, gentry, and clergy of all denominations, for their continued assistance in reference to the collection of the Returns. I have also to express my sense of the very valuable aid afforded by the public press of Ireland, in making extensively known the objects and advantages of procuring information relative to the farm produce of the country; and I beg to add, that to these various and gratifying causes, combined with the good feeling and intelligence of the Tenant Farmers, and to the zeal and efficiency of the Constabulary and Metropolitan Police, who acted as Enumerators, do I attribute the success which has attended the collection of agricultural statistics in Ireland.

I have the honour to be, my Lord,

Your Excellency's very faithful servant,

WILLIAM DONNELLY,

Registrar-General.

HENRY WILKIE,
Acting Secretary.

AGRICULTURAL STATISTICS OFFICE,

Beans and Peas were included in the same column in the Returns up to the year 1851. The produce of Flax in 1847 was estimated at 48 stones per statute acre. There was not any return of produce for Cabbage in 1847, as the extent of land under that crop was entered under the head of "Other Green Crops" in the Enumerators' returns.

TABLE V.—SHOWING THE AVERAGE RATES OF PRODUCE TO THE STATUTE ACRE—*continued.*

The following is a copy of the Instructions for filling the Townland Returns from which the foregoing Abstracts have been compiled:—
"When filling the above Return, those Townlands or portions of Townlands, in which the Farms are kept *generally free from weeds*, should "be entered in the '1st Class.' Those in which this useful labour is only *partially attended to* in the '2nd Class.' Those in which it is to a "*great extent neglected*, in the '3rd Class.' Those in which it may be said to be *wholly neglected*, in the '4th Class.' The area of the "four classes taken together should be equal to the area of the townland. This classification is also to be observed in describing the state "of the sides of Public Roads, Railways, and Canals, *with regard to the growth of weeds;* and the Enumerator should state in the column "for Remarks, *if their being permitted to shed their seed* is regarded by the Farmers in the District as a nuisance, and also if any, and what "measures are resorted to by road contractors or others for the purpose of destroying them."

AGRICULTURAL STATISTICS, IRELAND.

GENERAL ABSTRACTS

SHOWING

THE ACREAGE UNDER THE SEVERAL CROPS,

AND THE

NUMBER OF LIVE STOCK,

IN EACH COUNTY AND PROVINCE, FOR THE YEAR 1856.

TO HIS EXCELLENCY GEORGE WILLIAM FREDERICK EARL OF CARLISLE, K.G., &c.

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,

On the 20th of August I had the honour of submitting for your Excellency's consideration a return showing, by counties and provinces, the acreage under flax in 1855 and 1856, and the increase or decrease in the latter year; I now beg to submit general abstracts of the extent of land under crops, and the number and description of live stock in each county and province, in the same years.

The numbers for the latter year have been compiled from returns lately procured by the Constabulary and Metropolitan Police, who have acted as enumerators in their usual efficient manner. On further revision some slight alterations in the figures may be necessary, but so unimportant, that for all practical purposes the tables may be regarded as correct.

Success of Enumeration.

Your Excellency is aware that the information given to the Constabulary is altogether voluntary; and I feel assured it will afford pleasure to your Excellency to learn, as, I beg to say, it is most gratifying to me to have it in my power to state, that so far as I am informed by the enumerators—who amounted to nearly 4,000—hostility to the collection of these returns has been displayed by only one landed proprietor in Ireland,—a fact most highly creditable to the good feeling and intelligence of all ranks and classes in this country. It would appear from the reports of the enumerators, that instructions were issued to the tenantry of the proprietor referred to,—whose estates are situated in the counties of Leitrim and Donegal,—not to afford the required information as to their crops, or the number of live stock on their farms. I have therefore taken the returns made to me in 1855 for their holdings, as being the same in 1856. In reference to this subject I feel it due to the tenant-farmers on these estates to acquaint your Excellency that in former years they afforded all the information required by the enumerators, with the same confidence and good feeling so universally exhibited by their intelligent fellow-countrymen; and but for the directions issued to them in 1856 not to do so, it is reasonable to conclude that they would in this year have followed a similar enlightened course.

GENERAL ABSTRACT, showing, in Statute Acres, the extent of LAND under CROPS for each COUNTY and PROVINCE

Potatoes, ...	982,301	1,104,590	122,289	—
Turnips, ...	366,953	354,362	—	12,591
Other Green Crops,* . . .	95,136	99,873	4,737	—
Total, ...	1,444,390	1,558,825	127,026	12,591

Increase on Green Crops, in 1856, . . . 114,435 Acres.

GENERAL SUMMARY.

		Acres.
Increase on Green Crops, ...		114,435
Do. on Flax, ...		9,751
		124,186
Deduct Decrease on Cereal Crops, . . .	48,517	
Do. on Meadow and Clover, . .	10,824	
		59,341
Total Increase in the extent of Land under Crops, . .		64,845

* Mangel Wurzel, Beet-root, Carrots, Parsnips, Cabbage, Vetches, and Rape, are included under this head.

GENERAL ABSTRACT, showing the quantity of LIVE STOCK in each COUNTY and PROVINCE, in 1855 and

	PROVINCES AND COUNTIES.		HORSES, with the purposes for which they are kept.						CATTLE.						SHEEP.				PIGS.			
			Two years old and upwards.			One year old and under two years.	Under one year.	Total Number of Horses.	Milch Cows.	Other Cattle.			Total Number of Cattle.		One year old and upwards.		Under one year.	Total Number of Sheep.	One year old and upwards.	Under one year.	Total Number of Pigs.	
			Agricultural.	Traffic and Manufactures.	Amusement or Recreation.					Two years old and upwards.	One year old and under two years.	Under one year.			Ewes.	Tups and Wethers.

Acreage under Crops.

It appears from the foregoing abstracts that in 1856 there were 5,753,681 statute acres under tillage in Ireland, being an increase of 64,845 acres over 1855. The cereal crops collectively exhibit a decrease of 48,517 acres, divided among oats, barley, bere, rye, beans, and peas; wheat shows an increased area of 83,588 acres—445,775 acres having been sown in 1855, and 529,363 acres in 1856; of oats, there were 2,036,181 acres in 1856, being a decrease on 1855 of 82,677 acres. Barley, bere, rye, beans, and peas, covered 218,503 acres in 1856, which is a diminution of 49,428 acres compared with the previous year.

In "Green Crops," potatoes show an increase of 122,289 acres, or upwards of one-tenth more than in 1855—the numbers being in that year 982,301 acres, and in 1856, 1,104,590 acres. There were under turnips 354,362 acres in 1856, or 12,591 acres less than in 1855. "Other Green Crops"* show a small increase of 4,737 acres—the number being, in 1855, 95,136 acres, and in 1856, 99,873 acres. There were 106,826 acres returned as under flax in 1856, or an increase of 9,751 acres over last year. Although the area under this important crop does not equal its extent in 1852, 1853, or 1854, yet it is very gratifying to observe that in 1856 it has not continued to decrease. The increase in Ulster alone amounts to 8,999 acres; the province of Leinster also shows an increase in flax of 894 acres, and Connaught of 176 acres; but in Munster there is a decrease of 318 acres. In meadow and clover there is a decrease of 10,824 acres in 1856, there having been 1,314,807 acres in 1855, and 1,303,983 acres in 1856.

Number of Live Stock.

The Returns for 1856 exhibit an increase in the number of horses, cattle, and sheep; but pigs show a large decrease compared with 1855. The total number of horses in 1856 was 573,266, being 16,979 more than in 1855. Horses returned as kept for agricultural purposes increased by 13,940; for traffic and manufactures, by 1,595; and for amusement or recreation, by 616. Yearling horses are more numerous, by 4,494, than in 1855; but those under one year decreased by 3,663. The total number of cattle in Ireland in 1856 is 3,584,723, being an increase over the preceding year of 20,323. Of the entire number 1,579,073 were returned as milch cows, 778,938 as two years old and upwards, 620,216 as yearlings, and 606,496 as under one year,—these latter being 72,850 under the number in 1855,—the decrease being caused, in some measure, by the circumstance of the collection of the statistics having commenced on the 2nd of June this year; whilst in 1855 it did not commence until the 16th of July—six weeks later.

Sheep show a general increase of 85,801 in 1856, the numbers being—in 1856, 3,688,143; in 1855, 3,602,342. Those under one year increased 95,424, and tups and wethers, 73,034; but ewes decreased by 82,657. It is a very favourable indication of the progress of agriculture in Ireland, to find that the number of sheep has steadily augmented from 2,106,189, in 1841, to 3,688,143, in 1856, being an increase of 1,581,954, or more than one-half, in fifteen years. There were 1,177,605 pigs in 1855, and 915,933 in 1856, being a decrease in the latter year of 261,672, or more than a quarter of a million; those under one year diminished by 174,230, and those one year old and upwards by 87,442. This decrease affects every county in Ireland except Londonderry, and may be, in some degree, accounted for by the fact noticed in the preceding paragraph, that in 1855 the collection of the Statistics commenced on the 16th of July, whilst in 1856 it began on the 2nd of June,—*six weeks earlier;* the number of pigs littered during this period will therefore not appear in the Returns for 1856, as the small farmers so arrange the management of their stock, that the young pigs make their appearance about the middle of July, and are thus sufficiently old to consume the small potatoes which are abundant in October, when the general crop is being dug out. There cannot be any doubt but that many calves and other young animals were also born during the interval of the *six weeks* above referred to. In future years, however, the comparison of the stock will not be disturbed from this cause, as the Returns will be collected about the same time as in the present year, in accordance with the recommendation of the Select Committee of the House of Lords on Agricultural Statistics, in the session of 1855.

Having just received a copy of the Agricultural Statistics of Scotland for 1856, published on the 30th ultimo, I conceive it will be interesting to give the following table, showing the Total Acreage under Crops and the number of Live

With reference to the Agricultural Statistics for Scotland, as given above, Mr. Hall Maxwell states—"The acreage and stock in the hands of tenants occupying land rented at less than £10, in twenty-six counties, and at less than £20 in seven, *as ascertained in* 1854, should be added to what the tables exhibit, increasing the extent of land in cultivation by 238,170 acres, and the amount of stock by 334,308 head." The number of occupants whose acreage and stock were omitted from the Scotch Returns of 1855 and 1856 is stated to have been 42,229 in 1854; having then amongst them 29,008 horses, 129,469 cattle, 149,432 sheep, and 26,399 swine. The entire number of occupants of those farms in Scotland which contained the crops and stock given in the above tables was only 42,919. The number of occupants and holders of stock from whom the Statistics are collected in Ireland, is upwards of 600,000, and these Returns include the crops and stock of *every* occupier and stockholder in this country. It would therefore appear that the entire number of land and stockholders in Ireland may be set down as being 600,000, and in Scotland, 85,148.

It will be seen from the preceding Tables that in both Ireland and Scotland

there has been a *decrease* in the extent under oats, and under the collective crops, "barley, bere, rye, beans, and peas;" and a considerable *increase* in the breadth under wheat. Potatoes have also *increased* in both countries, largely in Ireland, —to a small extent in Scotland. Turnips have diminished in Ireland, whilst they have increased in Scotland; the acreage under "other green crops" is larger in both countries. In Stock, horses and sheep have increased, and pigs decreased, both here and in Scotland; whilst cattle have increased here and decreased in Scotland.

Measures to effect the destruction of Weeds.

Your Excellency is aware that in connexion with the agricultural statistics, I have, for the last four years, had returns made to me by the Constabulary, showing the extent to which weeds are permitted to grow, and, in most cases, *to shed their seeds* on the sides of highways, railways, and canals, as well as on the various farms of the country. On this subject I have the honour to give, in the Appendix, copies of two letters addressed by me to their Lordships, Her Majesty's Judges of Assize, also of circulars to the County Surveyors, and to the directors of every railway and canal in Ireland; and I beg to take this opportunity of acquainting your Excellency how deeply sensible I am of the kind and considerate manner in which my request to the Judges to bring the subject before the various Grand Juries, was received and acted upon by their Lordships, not only on the last Spring circuit, but more particularly during that lately concluded; and I am informed by communications from almost every county, that the several Grand Juries have given directions to the County Surveyors to take all necessary steps to prevent the great injury to the farming classes which has hitherto arisen from the growth of weeds along the sides of public roads. I would here take the liberty of remarking that your Excellency's observations, at the meeting of the Royal Dublin Society last April, and also at the late cattle show of the Royal Agricultural Society, at Athlone, as to the lamentable prevalence of weeds in Ireland, have had the happiest effect. In answer to the circular, which I took the liberty of addressing to the directors of railways and canals, I have to acknowledge the receipt, in several instances, of very courteous replies; copies of these I have felt it to be my duty to forward for insertion in the public papers; feeling that the assistance of the Press, which has hitherto been most liberally afforded to me on all occasions, is of the greatest importance, by making generally known the great injury and loss which arise from the unchecked growth of weeds on the farms and along the highways of the country. Every observer, and even the general traveller, must be struck with the great neglect on this important matter, which, with few exceptions, exists in almost every part of Ireland.

I beg to mention that having brought this subject before the Commissioners of National Education,* and suggested to them the many advantages that must arise by instructing their teachers to direct the attention of the children in the numerous schools under their control to the great importance of destroying weeds when found growing on their parents' farms; I have received a reply* promising every assistance in the matter; and have furnished to Mr. Macdonnell, the Resident Commissioner, 1,000 copies of my circular to County Surveyors, to be distributed by the teachers then in training on their return home; and I have learned that 6,000 of these circulars have since been procured by the Commissioners, for circulation amongst their schools. The Committee of the Church Education Society have also promised their valuable assistance* with the pupils in their schools, and also the Poor Law Commissioners,* through the medium of the masters and teachers in workhouses, by instructing the children in attendance as to the advantages which must arise to the community by the practice of destroying weeds. The Governors of Erasmus Smith's Schools* have also promised their friendly aid.

The Masters in Chancery,† upon all of whom I waited personally, have unanimously taken the subject into their consideration, and, I am informed, purpose recommending that an order should be issued requiring receivers over the estates under the Court to use their influence with the tenantry to keep their farms free from weeds.

The Commissioners of Public Works* have also directed the removal of weeds from all works in progress under their control, such as those of arterial drainage, roads, &c.

Copies of my correspondence with Her Majesty's Judges, and with the several

* See Appendix, pages 22, 23. † See Appendix, page 21.

public bodies and other parties, upon the subject of the destruction of weeds, are given in the Appendix; and I trust they will not be considered undeserving of attention.

The following extract from the works of that eminent man and real patriot —Sir John Sinclair, first President of "The Board of Agriculture," quoted in the "Rural Cyclopædia," will be read with interest, as exhibiting the immense loss* arising from the neglect of removing weeds from growing crops, and is highly valuable as being the record of actual experiment:—

Sir John Sinclair on the Destruction of Weeds.

"All plants which grow naturally among a crop that has been sown, may be regarded as *enemies* to that crop. The destruction of such plants, therefore, must be considered as one of the most important branches of the agricultural art; for if that is neglected, or even but slovenly performed, the crops may be reduced to the amount of one-fourth or one-third of a fair average crop, even upon the very best soils. Besides, it merits consideration, that if weeds are suffered to exist, the full advantages of manuring land, and many other improvements, can only be partially obtained. Nor is this all, the mixture of weeds in the soil prevents the crops from receiving the beneficial influence of the atmosphere,—sucks up that moisture so essential for the growth of the crop sown,—tends more than any other circumstance to injure the crop when lodged by violent winds or heavy rains,—augments the risks at harvest (for a crop that is clean, may be ready for the stack-yard in much less time than is required to harvest it, when encumbered with weeds),—and the seeds of these intruders deteriorate the quality of the grain. Notwithstanding all the injuries thence sustained, how many are there, who hardly ever attempt to remove weeds in an effectual manner? This negligence is the more to be blamed, because, were farmers at the trouble of collecting all sorts of weeds, before they had formed their seeds, and of mixing them with rich earth, with lime, or fermenting them with dung, they would soon be reduced into a soft pulpy mass, and in this way a pernicious nuisance might be converted into a valuable manure.—Various *experiments* have been tried, to ascertain the positive advantage derived from carefully weeding one part of a field, and leaving another part undone; among these, the following, made with peculiar accuracy, may be safely relied on:—

"1. *Seven acres of light gravelly land were fallowed, and sown broad-cast; one acre was measured off, and not a weed was pulled out of it; the other six were carefully weeded. The unweeded acre produced* 18 *bushels; the six weeded acres* 135 *bushels, or* 22½ *per acre, which is* 4½ *bushels, or* ¼ *more produce in favour of weeding.*—2. *A six-acre field was sown with barley, in fine tilth, and well manured. The weeding, owing to a great abundance of charlock, cost* 12*s. per acre. The produce of an unweeded acre was only* 13 *bushels; of the weeded,* 28. *Difference in favour of weeding,* 15 *bushels per acre, besides the land being so much cleaner for succeeding crops.*—3. *Six acres sown with oats; one acre ploughed but once, and unmanured, produced only* 17 *bushels. Another six acres ploughed three times, manured, and weeded, produced* 37 *bushels. This experiment proves, that oats require good management, and will pay for it as well as other crops. Ten bushels of the increased produce may be fairly attributed to the weeding, and the other ten to the manure.*

"The importance of weeding, both to the individual and to the public, is such, that it ought to be enforced by law. At any rate, a regulation of police, for fining those who harbour weeds, the seeds of which may be blown into their neighbours' ground, can have no injustice in principle. In England, the petty constable might be required, by precept from the high constable, to give in presentments to the Quarter-Sessions, containing a list of all persons who suffered weeds to run to seeds in their hedges or lands, such presentments to be particularly specified to the court. Those referring to the coltsfoot, to be given in at the Lady-day sessions; and those referring to thistles, rag-weed, &c., to be given in at the Midsummer sessions. An order of court might then be made, for the immediate removal of such nuisances; and if not complied with, the offender should be fined a sum not exceeding five pounds, one-half to the informer, and the other half to go for the relief of the poor. If, in consequence of such a system being enforced, from four to five bushels of wheat, fifteen bushels of barley, and ten bushels of oats additional, were raised in all the fields in the kingdom, whose crops are injured by weeds, the benefit would be well worth the labour and expense, and the farmers would soon find that however anxious they may be to have their lands tithe-free, yet to have them weed-free is of still greater importance. On the whole, keeping his land in a clean state ought to be a principal object with every farmer; and if this be not carefully attended to, he may rest assured of paying dearly for his neglect. But the losses which he suffers, do not remedy the injury which the public sustains from his slovenly conduct.

"In several countries, the legislature has interposed its authority for the destruction of weeds. By a regulation in France, *a farmer may sue his neighbour, who neglects to destroy the thistles upon his land at the proper seasons,* or may employ people to do it at the other's expense. In Denmark, there is a law to oblige the farmers to root up the corn marigold, *Chrysanthemum segetum.* But the oldest regulation for that purpose, was probably in Scotland; a statute of Alexander II., about the year 1220, having been directed against that weed, which was considered to be peculiarly pernicious to corn fields. The statute is very short, and ably expressed. *It denounces that man to be a traitor, 'who poisons the*

* See an able Article on this subject in the "Freeman's Journal" of the 27th of August, 1856.

Sir John Sinclair on the Destruction of Weeds.

king's lands with weeds, and introduces into them a host of enemies.'—Bondsmen who had this plant in their corn, *were fined a sheep for each stalk.* Under the authority of that law, Sir William Grierson, a Scottish baron, was accustomed to hold *Goul* courts, for the express purpose of fining the farmers in whose growing crops three heads or upwards of that weed were found. Such a plan, if generally adopted, would soon extirpate weeds; and as by a *clause introduced into many leases,* (and which ought to be universal,) the landlord is empowered to cut down these weeds, at the expense of the tenant, if the latter neglect to do it himself; it is much to be regretted that so useful a regulation should not be generally enforced. The policy of *some legislative provision* for this purpose has been frequently suggested. A clause enforcing the extirpation of weeds, in hedges, along the sides of roads, passed the House of Commons, but was thrown out by the Lords. It is to be hoped that so useful a measure, even on a more extensive scale, will soon be passed into a law. By some it is recommended that the destruction of weeds on the sides of roads should be done at the parish expense; others, by the road-surveyors, and the expense to be stated in their accounts. * * * *

"Though it is impracticable to extirpate annual weeds altogether, either by summer fallow or turnip culture, yet the number of weeds may be so much lessened, by these means as to prevent them from materially injuring corn crops. Two measures are necessary for that purpose,—first, to bring the seeds within the limits of vegetation;—and secondly, to destroy every weed that vegetates, thus regularly lessening the original stock. As the seeds of annual weeds are naturally furnished with the means of preservation while stored in the ground, it is absolutely necessary to bring them into life, before their destruction can be effected. This is accomplished by the operations of ploughing, harrowing, and rolling, by which the ground is pulverized and reduced, whilst the seeds are brought to the surface, or so near it as to allow their speedy vegetation. All the seeds within two or three inches of the surface, may be expected to vegetate according to circumstances, such as, richness of soil, fineness of mould, and the degree of moisture which may prevail when the above processes are executed. When the first crops of weeds appear above the surface, a second ploughing should be given, by which that crop will instantly be destroyed, and a foundation laid for producing another crop. Harrowing and rolling should again be resorted to; and in this way, several crops may be annihilated, in warm and moist seasons, before the turnips are drilled, more especially if attention has been paid to harrow and roll the land after every ploughing, so that sufficient moisture may be preserved to insure vegetation. When under turnips, both the hand and horse hoe should be constantly employed whenever weeds appear; and upon no account should a single one be allowed to run to seed. By paying due attention to these measures, many farms which formerly were a nest of seed-weeds, are now brought into such order that the weeds are kept under subjection and easily managed. In this way the destruction of many annual weeds may be accomplished, before the turnip-seed is sown, and the seeds of almost every annual weed locked up in the ground, may be brought to the surface, and within the reach of vegetation. Besides, the several horse and hand hoeings given to the turnip crop, serve to destroy every annual weed as fast as it appears; and if the seed-furrow given the corn crop which succeeds the turnips, is not taken deeper than the horse-hoeing furrow, (and a greater depth is unnecessary,) few weeds will appear in the corn crop which afterwards follows. As grass-seeds are always sown in the improved districts, with the corn-crop that succeeds turnips, no annual weeds can appear in that season; but it very often happens in the succeeding year, from ploughing the clover-stubble a little deeper than the seed-furrow given to the crop which succeeded turnips, that a fresh growth of annual weeds make their appearance. To get the better of these enemies some experienced farmers have hand-weeded the crops which followed clover, at an expense not less than from ten to twenty shillings per acre, and evidently much to their advantage; whilst others have resorted to the drill husbandry to get quit of annual weeds. The great object of both was, to procure clean crops, each being perfectly satisfied, that if their crops were full of weeds, the productive powers of the soil would not only be deteriorated, but that the amount or value of those crops would be also considerably lessened.

"Owing to the nature of the soil and climate, many perennial weeds are much more abundant in Scotland, and also in Ireland, Wales, and the north and north-west of England, than in other countries, where the soil is drier, and the climate more temperate. * *

"With regard to docks and thistles, the method of getting rid of them is perfectly obvious; all that is required being to fallow the ground well in the first instance, and to exterminate the plants afterwards whenever they appear. This may be accomplished by pulling them up by the root, in every corn-field, when the weather is moist, and cutting them over in all the grass lands before they have perfected their seeds; though cutting should only be resorted to when the weather is so dry as to prevent pulling these weeds out of the ground. The same attention ought to be paid to the destruction of nettles, ragweeds, mugwort, and the mountain daisy. Every one of these weeds ought to be pulled up by the root, if that measure can be accomplished; but where that is impracticable, they ought to be regularly cut down by the scythe, in which way their increase will at least be prevented. This operation should always be performed before their seeds arrive at maturity, otherwise the ground may thence be stocked with fresh seed, to an extent not much less than if the cutting process had been neglected."

The injurious effects of weeds is scarcely to be wondered at, when their extraordinary and almost *incredible fecundity* is taken into consideration. The following table (with the exception of the Irish names, for which I am indebted

to Dr. O'Donovan and Mr. Eugene Curry, M.R.I.A.), is taken from Professor Buckman, as quoted in the "Gardener's Chronicle and Agricultural Gazette," of the 12th of last July:—

"*Seeding of Weeds.*—One of the most fertile sources of the continuation of weeds is that of constantly *allowing them to seed on the land.* Now the enormous increase which may result from seeding may be gathered from the following table of observations made upon a few of our common species:— Fecundity of Weeds.

Botanical Name.	Irish Names.	Common Name.	Number of Flowers.	Number of Seeds each Flower may bear.	Number of Seeds on a single Plant.
Senecio vulgaris,	Grunnasg,	Groundsel,	130 ×	50 =	6,500
Stellaria media,	Fliodh,	Chickweed,	50 ×	10 =	500
Agrostemma githago,	Cogul-arbhuir,	Corn cockle,	7 ×	370 =	2,590
Lychnis dioica,	Rós-fiadhain,	Campion,	25 ×	137 =	3,425
Papaver rhœas,	Cailcin dearg,	Red poppy,	100 ×	500 =	50,000
Sinapis arvensis,	Carran buidhe,	Charlock,	400 ×	10 =	4,000
„ nigra,	Sgeallar dubh,	Black mustard,	200 ×	6 =	1,200
Galium tricorne,	Coinnleach leaptha,	Corn bed-straw,	100 ×	2 =	200
„ aparine,	Luibh-an-ladhair,	Clivers [Cleavers],	550 ×	2 =	1,100
Sonchus arvensis,	Fothannan,	Corn sow-thistle,	100 ×	190 =	19,000
Carduus nutans,	Fothannan cumhra,	Musk thistle,	25 ×	150 =	3,750
Æthusa cynapium,	Fionnas,	Fool's parsley,	300 ×	2 =	600
Ervum tetraspermum,	Roilléith,	Tare,	60 ×	3 =	180
Daucus carota,	Carrán Fiadhain,	Wild carrot,	600 ×	2 =	1,200
Pastinaca sativa,	Meacanfiadhain,	Wild parsnip,	600 ×	2 =	1,200

"Now, it is not likely that each individual plant would always perfect the quantities of seeds above tabulated; but the list gives a pretty accurate notion of the numbers of seeds which might be perfected under circumstances favourable to their development, and from it will at once be gathered the important practical fact that, allowing for the casualties to which seeds are constantly liable, yet enough would be left, where seeding is allowed but for a single year, to give trouble for many years after.

"*It cannot be too earnestly urged* THAT WEEDS BE DESTROYED BEFORE THEIR SEEDS ARE RIPE, OR INDEED NEARLY RIPE, *as the ripening process is often completed by the juices in the stems, especially of pulled weeds: hence groundsel and thistles, when pulled and laid by, as we saw last year, yet ripened much seed; and their involucres, opening in the sun, were wafted on the breeze to an indefinite distance; and it should be recollected that one—the primary head—may ripen long before the rest, so that a tolerable weed-growth may follow from a delay which has allowed only this one head to perfect its seed. Each plant of groundsel might in this way be increased* 50 *fold, each plant of corn sow-thistle,* 190 *fold, and a single head of musk-thistle may produce an increase of* 150 *fold.*"

And in the number of the same useful periodical for November 18th, 1854, another list of weeds is given, from which the following are selected:—

Botanical Name.	Irish Name.	Common Name.	Number of Seed vessels or Flowers to each Plant.	Number of Seeds to each Vessel or Flower.	Number of Seeds to each Plant.	When gathered in 1854.
Capsella bursa pastoris,	Sraidin,	Shepherd's purse,	150 ×	30 =	4,500	Sept. 9
Sisymbrium officinale,	Lus-an-oir,	Common hedge mustard,	450 ×	12 =	5,400	Oct. 13
Heracleum sphondylium,	Goran (or Goranach)	Cow parsnip,	2,500 ×	2 =	5,000	Aug. 17
Convolvulus arvensis,		Corn bind weed,	200 ×	3 =	600	Sept. 26

Lapsana communis,	Duilleog bhaighte,	Nipple wort,	560 ×	15 =	8,400	Sept. 23

Annexed are the names of some of the most noxious weeds, with compound flowers, which I have been informed by Doctor Mackay, author of the "Flora Hibernica," grow wild in Ireland, and all of which produce seeds in the greatest quantity:—

COMMON NAMES.	BOTANICAL NAMES.
1. Spear plume thistle.	Cnicus lanceolatus.
2. Marsh plume thistle.	Cnicus palustris.
3. Creeping plume thistle.	Cnicus arvensis.
4. Welted thistle.	Carduus acanthoides.
5. Slender-flowered thistle.	Carduus tenuiflorus.
6. Dandelion.	Leontodon taraxacum.
7. Ox-eye daisy.	Chrysanthemum leucanthemum.
8. Corn marygold.	Chrysanthemum segetum.
9. Rough hawkbit.	Apargia hirta.
10. Autumnal hawkbit.	Apargia autumnalis.

Of so much importance has the eradication of weeds been considered in the Colony of Victoria, that an Act has been recently passed to insure their destruction; the owner or occupier of the land on which they grow, may be ordered by a Justice of the Peace to destroy them, and is liable to a fine if he does not comply —a course which, if followed in this country, would be gratefully received by the farming classes, and be productive of great national benefit, as, according to the experiments of Sir John Sinclair, already referred to, the land, WHEN KEPT FREE FROM WEEDS, WILL YIELD A MUCH GREATER AMOUNT OF PRODUCE.

It will be gratifying to your Excellency to learn that, in addition to the letters given in the Appendix, promising assistance in the improvement of Irish agriculture, by the eradication of weeds, I have received from very many influential parties to whom I am personally unknown, communications expressive of their entire approval of what has been termed by some of them, the "National Crusade against Weeds." I also learn from copies of almost every Journal in Ireland, kindly sent to me by the Editors, that the Press has, without exception, given its powerful aid to the same object—one which most happily has received your Excellency's marked approbation. And I confidently trust, from the opinions so unequivocally expressed in every quarter, that much and permanent good will be effected by bringing the present great neglect on this subject prominently under public observation.

As I find that misapprehensions exist in some quarters relative to the steps taken to insure accuracy in filling the Returns by the Constabulary, I have given, in the Appendix, Copies of the Instructions issued by me to the several Enumerators, and also of the Forms upon which the extent of land under tillage and the number of live stock were collected.

I beg to state that the classification of the Holdings, and the preparation of the usual abstracts by baronies and poor law unions, together with the tables relative to mills for scutching flax, and those as to the prevalence of weeds on the sides of highways, and also upon farms, are in progress, and shall be submitted to your Excellency as soon as they can be prepared.

In conclusion, I have great pleasure in acquainting your Excellency, that on this, as upon previous occasions, I have received, in reference to the collection of these Statistics, valuable assistance from the Magistracy, the Clergy of all denominations, and other influential parties—and also from the public Press;—and as the object of procuring the Returns is now so generally known, and former prejudices no longer exist, I have not thought it necessary in the present year to circulate the usual explanatory letters on the subject.*

I have the honour to be,

Your Excellency's very faithful Servant,

WILLIAM DONNELLY,

Registrar-General.

AGRICULTURAL STATISTICS OFFICE,
5, HENRIETTA-STREET, DUBLIN,
15th September, 1856.

* See note, page 23.

APPENDIX.

COPIES OF INSTRUCTIONS TO ENUMERATORS

AND OF THE

FORMS USED IN TAKING THE AGRICULTURAL STATISTICS OF 1856.

AGRICULTURAL STATISTICS, IRELAND,

1856.

GENERAL INSTRUCTIONS.

5, Henrietta-street, Dublin,
14*th May*, 1856.

I.—ENUMERATION DISTRICTS.

1. The Returns of Townlands used in collecting the Agricultural Statistics for 1855, will assist Superintendents to divide their Constabulary Districts into convenient Sub-Districts for carrying out the objects of the present Agricultural Inquiry, and in doing so they are also recommended to avail themselves of the Ordnance Maps, in order that the Sub-Districts may be of the most convenient size.

2. Blank Forms of Returns (E) will be supplied, in which Superintendents will enter the names of the Townlands allotted to each Enumerator. These Returns are to be prepared *in duplicate*, one copy to be sent to this Office, the other to be given to the Enumerator.

II.—TILLAGE RETURNS.

1. For the greater convenience of compiling the information, it is proposed to collect the extent of Tillage in *each* Townland on *one* set of Returns, and the number of Live Stock on another. Form A is prepared for the former, and Form B for the latter.

2. Form A will contain the names of all persons occupying land within each Townland, also the size of their farms,—the quantity of land under each description of crop,—and the quantity not in tillage,—each to be given in Statute (or *English*) Acres. When bog or waste land is held with the farm, it should be stated in the details, and also in the total of the farm; but where tracts of land of any description are not occupied by a tenant farmer, or cultivated by the proprietor, their extent ought to be ascertained as nearly as possible, and added at foot of the Return, in *the proper* columns, *in the name of the Proprietor:*—The total of all these quantities should be equal to the area of the Townland, according to the Ordnance Survey.

3. In the case of a farmer holding land in two or more Townlands, the name of the *Townland in which he resides should be stated*, and also whether all the lands held by him are to be considered as one, or as separate farms. If, however, *the farms adjoin each other*, though in different Townlands, they may be considered as forming only one farm, *but if detached*, each separate lot is to be considered as a distinct holding.

4. *Land intended for Turnip or other Green Crops, but which may not be sown at the time of the Inquiry, should be entered in the proper column, as if the Crop were already in the ground—the Enumerator taking care to ascertain the exact extent to be cropped.*

5. Tables for converting Irish into Statute (or English) acres, and Statute (or English), into Irish acres, and also Statute (or English) into Cunningham acres, accompany these instructions.

6. *A precise* degree of accuracy in all those quantities is not expected, but there are few cases in which a very near approach to the truth may not be attained, and the area of the whole Townland being stated at the head of Form A., a check upon the quantities given by the Landholders, and a means of testing and correcting the general accuracy of the answers is thus afforded. Upon adding up the areas of the several farms within each Townland, if the total be found to differ more than 5 acres in a 100 from the area of the whole Townland, *further inquiry* should be made to ascertain the cause of the difference, and the previous statements corrected accordingly.

III.—RETURNS OF LIVE STOCK.

1. Form B.—The first and second columns of this Return will contain, like the first and second columns of Form A, the names of the Landholders and the extent of each holding. The other columns should show the number of each description of Live Stock on every farm, as expressed in the headings of the printed forms.

2. Grazing Stock, or Stock feeding on land not in the possession of the owner of the Stock, *is to be considered as the stock of that land for the time being*, and should be returned as in the possession of the holder of the farm.

3. In the case of persons who have Stock in their possession, *and are not Landholders*, their names and the quantity of Stock in the possession of each are to be entered on the same Return with the Landholders of the Townland, merely drawing a line across the "*Area*" column.

4. In regard to Towns, the Stockholders and Stock of *each Street* should be entered on *one or more* Forms as if it were a Townland.

5. Where farms extend into more than one Townland, the quantity of Stock on the portion of the farm within each Townland, at the time of the inquiry, should be entered *separately* in the Returns, *taking care that none are twice enumerated.*

6. In the B form are two columns for the purpose of distinguishing Horses kept for amusement or recreation, and for general traffic and manufactures, from those used for agricultural purposes. In many cases it will be found that the same horses are kept for recreation as well as for labour, and in every instance where the Enumerator is informed that any portion of the labour of the animal is given to productive employment the horse is to be set down in either of the columns, "Agriculture," or "Traffic and Manufactures," as the case may be.

IV.—RETURNS OF PRODUCE.

The extent of land cultivated is only one part of the information necessary to form a basis for calculating the quantity of food produced in Ireland, *the yield* being equally important but much more difficult to arrive at. Form C, which will be forwarded after the Harvest, with detailed instructions, has been framed for the purpose of ascertaining the *average rate of produce* per acre, and made as simple as the subject admits.

V.—RETURNS AS TO PREVALENCE OF WEEDS.

Form K has been prepared, in order to ascertain the degree of care observed by Farmers in keeping their lands free from Weeds,—and if any, and what precautions are taken by Road Contractors or others to *prevent the weeds on the sides* of the Public Roads, Railways, and Canals, from shedding their seed, thus becoming, as is too frequently seen, a nuisance, and doing great injury to adjoining farms. One of these forms is to be filled up by each Enumerator for the townlands allotted to him, and he is requested to state the result of his own observations on this subject.

VI.—ABSTRACTS OF THE A AND B RETURNS OF ENUMERATION DISTRICTS.

As soon as each Enumerator has completed the A and B Returns of the Townlands allotted to him, he will fill up with great care the Abstracts marked F^1 and F^2, which are designed to show at one view the results of the Inquiries he has made, and these Abstracts are to be placed in front of the files of the Returns to which they belong.

VII.—SCUTCHING MILLS.

In consequence of the importance of Flax cultivation, Form D has been prepared for the purpose of ascertaining the number and description of Mills employed in Ireland for dressing Flax by Machinery. One of these Forms is to be filled up for *each Constabulary Sub-district* in Ireland; and in those Sub-districts where there is not a Mill of the kind a statement to that effect signed by the Constable is to be written on one of these Forms and forwarded with the other Returns.

VIII.—PRINTED FORMS.

In deciding upon the supply of A and B Forms to be issued to each Constabulary District, a criterion is afforded by the number of Tillage and Live Stock Returns received from each District last year.

IX.—FORWARDING RETURNS TO DUBLIN.

1. When the Returns for any district have been completed they are to be carefully made up and forwarded by POST to this Office. The proper address is given on the printed labels, one of which should be pasted on each parcel.

2. An Invoice of the contents of each parcel should be posted at the same time, *but in a separate Envelope.*

3. Letters or Papers forwarded to this Office are *not to be prepaid.*

X.—FINANCE.

1. Each Sub-Inspector or Head Constable who shall discharge the duties of a Superintendent on the Agricultural Inquiry, will be entitled to claim the sum of 2*s.* 6*d.*, to cover his expenses for Stationery, in addition to his claim for any charges for postage or carriage of parcels unavoidably incurred, the particulars of which should be clearly stated in a Form of Account, No. 3. And each member of the Constabulary Force employed as an Enumerator will be allowed the sum of 2*s.* to cover the cost of Stationery and other incidental expenses arising out of this duty, exclusive of car-hire, boat-hire, and an allowance of 1*s.* per night when necessarily absent for the night from his barrack. The claims for allowances for Stationery, &c., are to be made on Form of Voucher No. 1, and for nightly allowance on Form of Voucher, No. 4.

2. In conformity with the Circular of the Inspector General, of the 1st September, 1853, and the Chief Secretary's Minute of the 3rd October following,—members of the Constabulary, employed on the Agricultural Inquiry, who may devote more than ten hours in any one day to this duty, will be entitled to an allowance of 6*d.* for every day whilst so employed, to be charged to this service, the claims for which are to be made out on Form of Voucher No. 5. As the duties of the Agricultural Inquiry extend over several days, it is conceived that the time employed should not exceed eight or nine hours a-day, except in a case of emergency, of which, it is hoped, that each Superintendent will fully satisfy himself, before he admits the claim. In cases in which the Townlands to be visited are remote from the station, and where it may be judicious to make this allowance for several consecutive days, *instead of the nightly allowance for absence from quarters*, a report of the facts should be made by the Superintendent to the Registrar-General, and his approval obtained *previous* to incurring the expense.

3. Application for leave to employ Interpreters should state the number of days for which the services of each will be required. Their rate of pay is not to exceed 1*s.* per diem, and it should be claimed on Form of Voucher No. 2.

4. Boat-hire, car-hire, or any other extraordinary charges, should be claimed on Form of Account, No. 3, in which every detail necessary to a perfect understanding of the nature of the demand and the value of the service is to be fully stated. *The written authority of the Registrar-General must be previously obtained for incurring the expenses* referred to on Forms of Vouchers 2, 3, 4, and 5, except in a case of emergency,—which *authority* is to be attached to the Voucher when forwarded to this office.

5. No Payment is to be made to any Person on behalf of another without the permission of the Registrar-General.

6. All accounts are to be furnished not later than ten days after the enumeration has been completed, in order to their prompt discharge.

XI.—GENERAL OBSERVATIONS.

1. It is most important that these inquiries should be *entered upon in each District, as nearly as possible at the same time.* The Registrar-General, therefore, recommends *Monday the 2nd of June* as the day on which the Enumeration is to be commenced, and that it be prosecuted diligently until completed, *as the Government is desirous of being informed of the results at an early period,* and in order that the errors arising from the transfer of Stock from one proprietor to another during the period of the inquiries may be as few as possible, expedition is most desirable. A Return according to Form G should be forwarded to this Office *without delay,* to show when the inquiries in each Enumeration District will probably be concluded, which it is confidently expected will *be at farthest by the 10th of July.*

2. *A few individuals from different localities, and amongst them some persons of much intelligence, have occasionally impugned the accuracy not only of the acreage under crops (more particularly of Green Crops), but also of the Returns of Agricultural Produce. It is therefore strongly urged upon the Enumerators that every possible care should be taken in making the inquiries and in noting accurately, not only the information they receive, but also, in the proper columns, the names of the persons from whom they receive it, so that no difficulty may arise, in establishing the fact that the Constabulary discharged the duty confided to them in their usual creditable and trustworthy manner—should investigations hereafter take place into the published results of their inquiries and returns.*

Recent experience has shown that the Enumerators have, in some cases, had much difficulty in arriving at even an approximation to the extent of "Woods or Plantations," their attention is now, therefore, more particularly directed to this subject, as being one which requires increased care.

Errors have sometimes arisen in preparing fair copies of the Returns A and B, by inserting the facts previously collected, *in wrong columns,*—due care will prevent this in future.

3. In carrying the foregoing Instructions into effect, the Enumerators will observe the utmost civility; the information sought is to be asked for with gentleness, and *never* with harsh language or threats. It is to be borne in mind, that almost all persons view inquiries of this character with jealousy in proportion to their want of knowledge of the results sought to be obtained; it is however considered that the publications which have resulted from similar previous inquiries have already

done much to remove prejudices from the minds of all classes, so that it is confidently expected the Returns of this year will be collected with facility, and that the required information will on public grounds be faithfully given to the Enumerators by occupiers of land, and also by proprietors of Stock.

4. *It is most important that in all cases, where possible, the Enumerator should ascertain the particulars from the owner of the Farm, or from his Steward.*

WILLIAM DONNELLY, *Registrar-General.*

I approve of the foregoing Instructions being addressed to the Constabulary, who will use their best exertions to obtain early and accurate information for the Government.

Sub-Inspectors will take care that the Districts of Enumerators are of *such convenient size* that the Returns required may be completed and forwarded to the Registrar-General by the 10*th of July, at farthest.*

County Inspectors will afford every facility in their power to carry out the objects herein referred to.

D. M'GREGOR, *Inspector-General.*

Approved, THOMAS A. LARCOM, *Dublin Castle.*

PATTERN RETURNS.

COPIES OF LETTERS ADDRESSED TO VARIOUS PUBLIC FUNCTIONARIES BY THE REGISTRAR-GENERAL, WITH A VIEW TO THE DESTRUCTION OF WEEDS IN IRELAND.

No. 1.

Agricultural Statistics Office,
5, Henrietta-street, Dublin,
21st February, 1856.

My Lord,

I beg to state that in connexion with Agricultural Statistics, I have, with the sanction of the Government, for some years past, procured Returns from every Constabulary District in Ireland, which unfortunately exhibit a great prevalence of Weeds, not only on large tracts of land, *but also along the sides of Public Roads*, in almost every County.

I enclose a Copy of the Form on which this information has been furnished to me by the Enumerators; and the results are given in my Report on Agricultural Statistics, for 1854, a copy of which I had the pleasure of presenting to your Lordship.—(*Vide* pp. xxi, xxii, xxiii.)

I annex the Copy of a Resolution setting forth the injury arising from the *growth of Weeds along the sides of Public Roads*, which was addressed in 1854, to the Grand Jury of each County, by the Royal Agricultural Improvement Society.

My reason for now bringing these circumstances under your notice, is, respectfully to solicit that on public grounds, and as tending to a great social improvement, *your Lordship may, perhaps, be pleased, at the approaching Assizes, to direct the attention of the Grand Juries, and County Surveyors*, to an object which is calculated to be of much benefit to the Farming Classes of Ireland.

Trusting that you will pardon the liberty which I take in addressing you on this subject,

I have the honour to be, your Lordship's faithful servant,

To the Right Honourable
Judge ————,
&c., &c.

William Donnelly, *Registrar-General.*

Enclosure.

42, *Upper Sackville-street, Dublin,*
21st February, 1854.

At a very full Meeting of the Managing Committee of the Royal Agricultural Improvement Society of Ireland, held this day—(upon the motion of Mr. Donnelly),

It was unanimously Resolved—

"That, as great injury arises to the Farming Classes in this country from the growth of Weeds along the sides of Public Roads, whose Seeds being allowed to Ripen and Shed, are spread over the adjoining lands,

"A Circular be immediately addressed to the Grand Juries of the several counties, soliciting them to give directions to the County Surveyors to make it imperative upon Road Contractors to cut down and remove all Weeds, more particularly Thistles, Docks, and Rag Weeds, *before the 1st of June, and at such other periods in the year* as may prevent their injurious effects to the Farmer."

Henry Hall, (Colonel, C.B.,) *Chairman.*

No. 2.

Agricultural Statistics Office,
5, Henrietta-street, Dublin,
July 7th, 1856.

My Lord,

With reference to my letter of the 21st of February last, asking your Lordship to be so good as to direct the attention of Grand Juries and County Surveyors to the pernicious growth of Weeds which is permitted along the sides of Public Roads, greatly to the injury of the Farming Classes of Ireland, I now take the liberty of enclosing the Copy of a Circular addressed by me to all County Surveyors, in the hope that your Lordship may be pleased at the present Assizes to bring the subject before the several Grand Juries with a view to the introduction of a Covenant into all Road Contracts requiring the destruction of Weeds along the sides of the Public Highways of the Country.

Trusting that you will pardon this liberty,

I am, your Lordship's faithful servant,

(Signed) William Donnelly, *Registrar-General.*

The Right Honourable
Judge ————,
&c., &c.

No. 3.

Agricultural Statistics Office,
5, Henrietta-street, Dublin,
5th July, 1856.

SIR,

As it is now universally admitted that great injury arises to the Farming Classes in Ireland, from the growth of Weeds along the sides of Public Roads—Railways and Canals—and the shedding of their seeds over the adjoining lands, and as you are probably aware, that the attention of many of the Grand Juries and County Surveyors was directed to the subject by the Judges of Assize at the last Spring Circuit, I take the liberty of addressing you, in the hope, that in your official capacity as Surveyor of the County of _____, you will obtain the authority of the Grand Jury at the present Assizes, in order that a special Covenant may be introduced into all Road Contracts, requiring the destruction of Weeds on the sides of the Highways under your supervision. I beg here to inform you that the Lord Lieutenant considered the removal of Weeds *not only from Farms*, but also from the sides of all Public Roads, of so much general importance, that His Excellency was pleased to refer to the subject at a recent Agricultural Meeting of the Royal Dublin Society. Annexed is a table, taken from my Report on Agricultural Statistics in 1854, which shows the great prevalence of Weeds on Road sides:—

The degree in which Weeds prevailed on the sides of Roads, Railways, and Canals, is shown in *four* classes: in the first, the proportion *kept generally free* from Weeds is given; the second shows the proportion in which the removal of Weeds was *only partially* attended to; the third, the proportion in which this useful labour was *almost entirely omitted;* and the fourth class, that in which it was *wholly neglected.* According to the Returns received by me, the proportion under each of these classes is shown for 1853 and 1854, by Provinces:—

PROVINCES.	ROAD SIDES, &c.							
	First Class.		Second Class.		Third Class.		Fourth Class.	
	1853.	1854.	1853.	1854.	1853.	1854.	1853.	1854.
	Proportion per cent.	Proportion per cent.	Proportion per cent.	Proportion per cent.	Proportion per cent.	Proportion per cent.	Proportion per cent.	Proportion per cent.
Leinster, . . .	27	25	27	16	16	9	30	50
Munster, . .	24	17	30	17	19	9	27	57
Ulster, . .	23	18	30	25	26	17	21	40
Connaught, .	18	14	25	16	19	9	38	61
Ireland, .	24	18	28	19	19	11	29	52

The following is an extract from a Notice, addressed to Road Contractors by a County Surveyor of Ulster,—in which the destruction of Weeds is specially referred to in the Specification as *one of the conditions of the Contract.*

"*Road Contractors will please take notice that no certificates will be granted, unless their Roads have been kept in repair in accordance with the following specification.*"

* * * * * * * * * *

"*The Roads, Footpaths, and Fences, must be kept free from Weeds.*"

* * * * * * * * * * *

On Public Grounds, and more especially on account of the benefit which will arise to the Farming Classes of Ireland,—who so largely contribute to the maintenance of Public Roads,—I trust you will excuse my addressing you on this subject.

I am, Sir, your obedient servant,
WILLIAM DONNELLY, *Registrar-General.*

To ———
The County Surveyor
of ———.

OBSERVATION MADE ON THE FOREGOING SUBJECT BY THE MASTERS IN CHANCERY:—

"We beg leave strongly to recommend this matter to the consideration of the Receiver Master, our brother, Master Lyle."

WILLIAM HENN, EDWARD LITTON,
WILLIAM BROOKE, J. J. MURPHY.

July 19, 1856.

[I subsequently received the approval of Master Lyle personally.]—W. D.

No. 4.

Agricultural Statistics Office,
5, Henrietta-street, Dublin,
24th July, 1856.

GENTLEMEN,

May I take the liberty of requesting your attention to the accompanying Circular, addressed by me to the County Surveyors, relative to the destruction of Weeds along the sides of Public Roads in Ireland.

A copy of this Circular was forwarded by me to each Judge of Assize, Grand Jury, and Clerk of the Crown, for every County, previous to the late Circuit,—and it has, I am happy to state, been very favourably received,—the importance of the subject to the farming classes having been brought under the notice of the Grand Juries by their Lord-

ships the Judges, in a very marked manner,—and I am informed that in future a special covenant will be introduced into Road Contracts, in those Counties in which the practice has not hitherto existed, requiring the Contractors to destroy all Weeds along the Sides and Fences of the Roads under their care.

I confidently trust that, on public grounds, you will excuse my addressing you on this subject, and that you will be so good as to give directions to have all Weeds *immediately* removed which may be found growing on the sides, embankments, cuttings, and fences of the Railway under your control, and thus aid in conferring a great benefit on the farming classes of the country, as it is scarcely necessary for me to observe, that the shedding of the *seeds* of Thistles, Dock, Ragweed, and other noxious plants,—which are now *fast approaching to maturity*,—must cause great injury to the occupiers of land adjoining those Railways along which this most useful labour has been hitherto omitted.

I am, Gentlemen, your faithful servant,

To the Chairman and Directors of the ——— Railway.

WILLIAM DONNELLY, *Registrar-General.*

No. 5.

Agricultural Statistics Office,
5, Henrietta-street, Dublin,
10th July, 1856.

SIR,

Referring to my conversation with you on the 5th instant, I beg to enclose the copy of a letter addressed by me to the Judges of Assize, and also the copy of a Circular to the Surveyor of each County, pointing out the great importance of the destruction of Weeds along the sides of Highways,—I am happy to add that these have been most favourably received in every quarter.

As this, I think, may be considered a subject of National interest, it occurred to me, as I have already stated to you, that the Irish farmers would be greatly benefited if their children who attend the National Schools were impressed with the feeling that the growth of Weeds is most injurious to a proper system of cultivation; and that the pupils of these schools should be requested by their Teachers to destroy all Weeds found growing on the farms of their parents.

As I understood you to concur with me in the importance of the subject, may I request you will be so good as to bring it under the notice of the Commissioners of National Education, at their meeting to-morrow, in order to obtain their approval to directions being given to the Inspectors of your Schools, to call the attention of the Teachers, not only of the Agricultural, but also of all other Schools in connexion with the Board of National Education, to the great benefit certain to arise to the farming classes of Ireland, by instructing the pupils as to the necessity of destroying Weeds. I need scarcely add, that the seeds of Thistles and all other noxious Weeds are now fast advancing to maturity.

I am, Sir, your obedient servant,

To the Right Honourable Alex. MacDonnell, &c., &c.

(Signed) WILLIAM DONNELLY, *Registrar-General.*

REPLY.

Office of National Education,
21st August, 1856.

SIR,

We have had the honour of laying before the Commissioners of National Education, your letters of the 10th July and 18th instant, relative to the great importance of the destruction of Weeds along the sides of Highways.

We are directed to state in reply, that the Commissioners cordially approve of the suggestion you have made, that *the children attending the National Schools should be instructed by their respective Teachers as to the necessity of destroying all Weeds found on the farms of their parents, or on the Highways adjacent thereto.*

The Commissioners will, therefore, have much satisfaction in pointing out to their Inspectors the steps necessary to be taken for carrying your suggestion into effect.

We are, Sir, your obedient servants,

MAURICE CROSS, JAMES KELLY, *Secretaries.*

William Donnelly, Esq., Registrar-General, Agricultural Statistics Office, 5, Henrietta-street, Dublin.

[The number of pupils attending National Schools exceeds *half a million.*]

No. 6.

Church Education Society for Ireland,
Kildare-street, Dublin,
28th August, 1856.

SIR,

In accordance with your request to the Rev. Alexander Leeper, (Chaplain to the Society,) relative to the importance of destroying weeds along the sides of highways, &c., your letter of the 22nd instant was laid before the Committee of the Church Education Society. I am directed, in reply, to state *that the Committee very cordially approve of your suggestion that the children attending Church Education Schools should be*

instructed by their teachers as to the necessity of destroying all weeds found on the farms of their parents, or on the highways adjoining thereto. The Committee will make the matter known to all their students under training for the post of teacher, as also to their inspectors, to whom they will give the necessary instructions.

I am, Sir, your obedient servant,

JOHN BANKS, R.N., *Assistant-Secretary.*

Wm. Donnelly, Esq., Registrar-General,
Agricultural Statistics Office,
5, Henrietta-street, Dublin.

[The number of children attending Church Education Schools exceeds *ninety thousand.*]

No. 7.

Poor Law Commission Office, Dublin,
5th August, 1856.

SIR,

The Commissioners for administering the Laws for the Relief of the Poor in Ireland acknowledge with thanks the receipt of your letter of the 31st ultimo, transmitting copies of two circulars issued by you, one addressed to County Surveyors, and the other to the Directors of Railways and Canals in Ireland, relative to the destruction of Weeds; and the Commissioners desire to inform you that they have directed that copies of your letter, and of the circulars which accompanied it, be transmitted to the Boards of Guardians of the several Unions in Ireland, and that their attention be called to your suggestion, that the children in the workhouse schools should be instructed as to the injury arising from, and the necessity for destroying, Weeds on the farms upon which, in after life, they may be employed.

By Order of the Commissioners,

B. BANKS, *Chief Clerk.*

William Donnelly, Esq.,
Agricultural Statistics Office,
5, Henrietta-street.

No. 8.

Office of Public Works, Dublin,
4th August, 1856.

SIR,

I am directed by the Commissioners of Public Works to acknowledge the receipt of your letter of the 31st ultimo, respecting the destruction of Weeds growing on embankments, or heaps of earth formed during the progress of works under the control of this department, and, in reply, to acquaint you that the Commissioners will be happy to co-operate in carrying out the very desirable object contemplated by you, and will issue instructions to their officers accordingly.

I am, Sir, your obedient servant,

E. HORNSBY, *Secretary.*

William Donnelly, Esq., Registrar-General,
Agricultural Statistics Office,
5, Henrietta-street.

No. 9.

Board-room of the Governors of the Schools
founded by Erasmus Smith, Esq.,
11, *Kildare-street.*
13*th September,* 1856.

SIR,

In reply to your letter, dated 5th instant, I beg to say that the Governors have ordered a circular to be addressed to their teachers, directing them to carry out your suggestion, that the pupils attending the Governors' Schools should be instructed as to the necessity for destroying weeds on the farms of their parents and elsewhere.

I have the honour to be, your obedient servant,

EUSTACE THORP, *Assistant-Registrar.*

Wm. Donnelly, Esq., Registrar-General,
Agricultural Statistics Office,
5, Henrietta-street.

NOTE.

In the years 1853, 1854, and 1855, Circulars were addressed by me to the Magistracy, Clergy of all Denominations, and other influential parties throughout Ireland, explaining the object of collecting Agricultural Statistics, and soliciting their assistance in the removal of prejudices opposed to these inquiries.

Office of National Education, Dublin,
March 1857.

NATIONAL EDUCATION (IRELAND).

RETURN of the Sittings of the Board of National Education in *Ireland*, from the 1st day of August 1855 to the 1st day of February 1857, with the Day of the Week and Month of each Sitting, and the Names of the Commissioners present at every such Meeting respectively, and designating Extraordinary and Ordinary Sittings.

(*Mr. Hume.*)

Ordered, by The House of Commons, *to be Printed*,
17 *March* 1857.

130.

Under 1 *oz.*

QUEEN'S COLLEGES (IRELAND).

RETURN to an Order of the Honourable The House of Commons, dated 16 February 1857;—*for*,

A RETURN "of the NAME, DATE of APPOINTMENT, and SALARY of the PRESIDENTS, VICE-PRESIDENTS, FELLOWS, and PROFESSORS of the QUEEN'S COLLEGES in *Cork*, *Belfast*, and *Galway* respectively; if there be any Official Residence, or Allowance instead of a Residence, provided for such Presidents, Vice-Presidents, Fellows, and Professors, the Number of Weeks in each Year, since the opening of these Colleges for the Instruction of Students, during which such Presidents, Vice-Presidents, Fellows, and Professors shall have resided elsewhere than in such Colleges or Official Residences respectively; if any of the said Presidents, Vice-Presidents, Fellows, or Professors hold any other and what Public Office or Employment, and, if there be any Salary, Emolument, or other Advantage, attached to such Office or Employment, the Nature and Value thereof, and the Date of Appointment to such Office or Employment."

QUEEN'S COLLEGE, CORK.

RETURN from the PRESIDENT.

Queen's College, Cork.

1. Name of President?—Robert Kane.

2. Date of appointment?

The date of the Letters Patent founding the College, and appointing Robert Kane to be first President thereof, is 3d January 1846.

3. Salary of President?—£. 800 per annum.

4. If there be any official residence, or allowance instead of a residence, provided for such President?

Apartments (a house unfurnished, and without stables or offices, valued for taxation at 35*l.* per annum) are provided for the President. The heating and lighting of the official residence is included with that of the other portions of the College, under the statutes.

5. The number of weeks in each year since the opening of the College for the instruction of students, during which the President has resided elsewhere than in such College or official residence?

No record is kept of the number of weeks during which the President has resided in the College or official residence, or elsewhere.

The President does not reside continuously at the College, as he accepted the office expressly on the condition that it should not interfere with his continuing to hold the office of Director of the Museum of Irish Industry in Dublin, to which he had been previously appointed. This condition was acceded to and announced, and under this arrangement the President resigned the two professorships which he held in Dublin, and withdrew from his private scientific practice in order to devote himself to the duties of the two Governmental offices, the Directorship of the Museum of Irish Industry and the Presidency of Queen's College, Cork.

Further: the President is not required by the College statutes to reside in the College, and provision is specially made in the statutes for his absence, by the appointment of a Vice-President, who is to discharge all the duties of the

Queen's College, Cork.

internal administration of the College during the absence of the President. The frequent absence of the President is in fact rendered obligatory by the charter of the Queen's University, which makes the President *ex officio* a member of the University Senate, and provides, that in order that the College shall be always represented at the meetings of the Senate, the Vice-President becomes a Senator in case of the President being unable to attend, and should proceed to Dublin to attend the meetings in his stead.

Practically, however, the President has been resident in the College for a portion of every term, in every session, in every year since the College opened, and has discharged every duty assigned to his office by the College statutes, in such manner as that no case has ever occurred in which any embarrassment or inconvenience to the service of the College has arisen, in any way produced by a neglect of duty by the President, or by his absence on any occasion from the College.

The general government of the College is vested by the statutes in the Council, consisting of the President, Vice-President, and four Deans of Faculty, elected annually by the Professors. This body meets at intervals for the transaction of business. Attendance on those meetings is rendered obligatory by the statutes on the other members of Council, but not on the President, whose absence is contemplated by the statutes, by reason of his other duties. The President has, however, when at the College, usually, though not in every case, attended the meetings of Council which occurred, and has, in fact, attended the greater number, viz., 123 out of 234 meetings which have been held from the time of the opening of the College, in October 1849, up to the present date. The meetings so attended by the President were such as were held for the transaction of the more important business of each session; and the meetings not attended by the President were such as had to transact only unimportant business, except in a few instances, when the objects of the meetings had reference to the functions of the President, which the majority of the Council considered would be best decided on in his absence, and arranged accordingly that he should not be present on those occasions.

6. If the President holds any, and what other public office or employment, the nature and value of any salary, emolument or other advantage attached to such office or employment, and date of appointment?

The President is *ex officio* a member of the Senate of the Queen's University in Ireland, which holds its meetings in Dublin. The President is required, under the charter of the University, to attend all such meetings; and, if unable to attend, the Vice-President becomes a Senator, and should attend in his stead, leaving his class and college duties. The President is, therefore, by the University regulations, required to be in Dublin frequently, and for considerable periods, on the business of the College and of the University.

There is no emolument or advantage connected with the office of member of the Senate of the Queen's University in Ireland.

The date of appointment by the charter of the Queen's University is the 4th of October 1850.

The President of Queen's College, Cork (Robert Kane), holds the office of Director of the Museum of Irish Industry in Dublin, under the department of Science and Art, Board of Trade.

The date of that appointment is 31st March 1845.

The salary of that office is 400 *l.* per annum.

That office was accepted by Robert Kane in 1845, expressly on the condition that it should not in any way interfere with the other scientific appointments which he then held, or with his private professional business, then very extensive and lucrative. At the close of the year 1845, when Robert Kane was applied to in regard to the office of President of Queen's College, Cork, he agreed to give up his two Professorships, and to retire from private professional business, in order to devote himself to the duties of the two Governmental appointments, but he declined to accept the office of President of Queen's College, Cork, unless he should hold it in conjunction with the office of Director of the Museum of Irish Industry. These conditions were duly considered and finally acceded to, and the office of President of Queen's College, Cork, was, under those circumstances, accepted by Robert Kane; the two Professorships he had held

held were given up, and his professional practice abandoned, as already explained. Queen's College, Cork.

(signed) *Robert Kane,*
Director of the Museum of Irish Industry, Dublin,
and President of Queen's College, Cork.

24 February 1857.

RETURN from the PROFESSOR of LATIN.

I hold in this College the Professorship of Latin, to which I was appointed on August 5th, 1849; the salary of this office is 250 *l.* per annum.

I have neither an official residence, nor an allowance in lieu of one.

I also hold the Examinership in Latin at the Queen's University in Ireland, to which I was appointed on July 16th, 1856; the salary of the Examinership is 100 *l.* per annum: this latter office is not permanent.

Queen's College, Cork,
23 February 1857.

(signed) *Bunnell Lewis.*

RETURN from the PROFESSOR of NATURAL HISTORY.

The office which I hold is the Professorship of Natural History.

The date of my appointment, 26th November 1854.

The salary, 200 *l.* sterling per annum.

I have no official residence, nor any allowance in lieu thereof.

I have never resided either in the College or in any official residence, nor been absent for a single week from the duties of my chair since my appointment.

I hold no other public office or employment.

Queen's College, Cork,
23 February 1857.

(signed) *William Smith,* F. L. S.,
Professor of Natural History.

RETURN from the PROFESSOR of MATHEMATICS.

Name of my office - - - -	Professorship of Mathematics.
Date of appointment - - -	About the 5th of August 1849.
Salary - - - - - -	£. 250 per annum, with fees, amounting on the average of the past seven years to about 74 *l.* per annum.
Official residence - - - -	None.
Allowance in place thereof - -	None.
Other public appointments held by me	An Examinership in Mathematics, for the present year, in the Queen's University.
Value of that appointment - -	£. 100 per annum.
Date of the same - - - -	About the 16th of July 1856.

Queen's College, Cork,
23 February 1857.

(signed) *George Boole,* LL.D.

RETURN from the PROFESSOR of MATERIA MEDICA.

I beg to state that I am Professor of Materia Medica. The date of my appointment is August 1849. My salary is 100 *l.* per annum. I have no official residence, and I have no allowance instead thereof. I hold no other public office nor employment.

Queen's College, Cork,
21 February 1857.

(signed) *Alex. Fleming.*

Queen's College, Cork.

RETURN from the PROFESSOR of SURGERY.

I beg to say that I hold the Professorship of Surgery since the opening of the College; that I have not an official residence; and my salary is 100 *l.*, without any further allowance.

Since the year 1828 I am Surgeon of the Cork North Infirmary. In virtue of this office, I am entitled to a salary of 50 *l.* Irish currency, which I give as my contribution to the funds of the charity. I am also Inspector of Anatomy; salary, 70 *l.* Date of warrant, 1 January 1833. No allowance.

Queen's College, Cork,
23 February 1857.

(signed) *Denis B. Bullen*, M.D.

RETURN of the PROFESSOR of NATURAL PHILOSOPHY.

Name of appointment - - -	Professorship of Natural Philosophy.
Date of appointment - - -	15 August 1855.
Salary - - - - -	£.250 per annum.

I have no official residence, nor allowance instead of it. I hold no other public office.

Queen's College, Cork,
23 February 1857.

(signed) *John England*,
Professor of Natural Philosophy.

RETURN from the PROFESSOR of LOGIC and METAPHYSICS.

1. I was appointed on the 5th of August 1849 to the Professorship of Logic and Metaphysics in Queen's College, Cork, the salary attached to which office is 250 *l.* per annum.

2. I have no official residence within the College or elsewhere, and have never received any allowance in lieu thereof.

3. I do not now hold, nor have ever since the opening of the Queen's College in 1849 held, any public office or employment whatsoever.

Queen's College, Cork,
23 February 1857.

(signed) *G. S. Read*,
Professor of Logic and Metaphysics.

RETURN from the PROFESSOR of PRACTICE of PHYSIC.

I was appointed to the Professorship of the Practice of Physic at the opening of the College in the year 1849, at a salary of 100 *l.* a year; I have no official residence, nor allowance instead; I have never been absent more than one week since the opening of the College; I hold no other office, but pursue my profession as a physician, from which I derive emolument.

2, Camden-place,
23 February 1857.

(signed) *D. C. O'Connor*, A. B., M. D.,
Professor of Practice of Physic.

RETURN from the PROFESSOR of CIVIL ENGINEERING.

Name of office - - - -	Professorship of Civil Engineering, Queen's College, Cork.
Date of appointment - - -	Date of Queen's letter appointing, is "28th of August 1855."
Amount of salary - - -	£. 150 per annum.
Absence from College, or official residence.	There is no College or official residence provided for the Professor of Civil Engineering, nor allowance instead. I have, therefore, never resided in any such.

Other

Other Office or Employment - -	Examiner in Civil Engineering in the Queen's University in Ireland, for the Session 1856–57.
Salary of such Office - - -	£. 50.
Date of Appointment to such Office.	16th July 1856.

Queen's College, Cork,
23 February 1857.

(signed) *Alexander Lack*, A. M.,
Professor of Civil Engineering.

RETURN from the PROFESSOR of CHEMISTRY.

I beg to state that I was appointed at the opening of this College, in August 1849, to the Chair of Chemistry, at the yearly salary of 200 *l.*; that I have neither an official residence, nor any allowance instead of such residence; that I have, during the past two years, held the office of Examiner in Chemistry to the Queen's University in Ireland, at a yearly salary of 100 *l.*; and that having acted in this capacity for the full period (two years) allowed to an Examiner by the University Senate, I must this year vacate this post.

(signed) *J. Blyth*, M.D.,
Professor of Chemistry.

Queen's College, Cork,
23 February 1857.

RETURN from the PROFESSOR of MODERN LANGUAGES.

My appointment is that of Professor of Modern Languages, which I have held since the month of October 1849, date of the opening of the Queen's Colleges.

The salary attached to that office is of 200 *l.* per annum. There is no official residence, nor do I receive any allowance instead thereof.

Since the opening of the College I have been engaged either 28, 29, or 30 weeks, each year, in giving instruction to the students, and have never been absent from the College excepting during the vacations.

I am holding no other public office or employment.

Queen's College, Cork,
23 February 1857.

(signed) *Raymond de Vericour.*

RETURN from the PROFESSOR of ANATOMY and PHYSIOLOGY.

The name of the office held by me is the Chair of Anatomy and Physiology; the date of my appointment thereto is the 15th of April 1854; and the salary of this office 200 *l.* per annum.

There is no official residence, nor any allowance instead thereof, attached to my office in the Queen's College, Cork.

I do not hold any other permanent office.

I have acted as Examiner in Anatomy and Physiology to the Queen's University during the last two years, at a salary of 100 *l.* per annum. This office is not permanent.

23 February 1857.

(signed) *Joseph Henry Corbett.*

RETURN from the PROFESSOR of MINERALOGY and GEOLOGY.

The name of the office held by me as Professor is the Chair of Mineralogy and Geology. The date of my appointment thereto is the 27th April 1853; and the salary received for this office is 200 *l.* per annum.

Queen's College, Cork.

There is no official residence, nor any allowance instead thereof, attached to my office in Queen's College, Cork.

Besides the Chair of Mineralogy and Geology in Queen's College, Cork, I hold the appointment of Curator of the Museum in this institution, to which there is no salary attached, nor any official residence, or allowance instead of residence.

I also hold the office of Lecturer under the Science and Arts Department of the Board of Trade; but to this I have no official appointment. My duties in connexion with this are in a great measure casual, and depend upon the committee of this department in Dublin. The gross sum which I derive from this employment is 50 *l.* per annum.

23 February 1857. (signed) *Robert Harkness.*

RETURN from the PROFESSOR of CELTIC LANGUAGES.

The name of the office held by me as Professor is the Chair of Celtic Languages, the date of my appointment thereto being 6th August 1849; and the salary received for this office is 100 *l.* per annum.

There is no official residence, nor any allowance instead thereof, attached to my office in Queen's College, Cork.

I hold no other office, nor have any other employment whatsoever.

23 February 1857. (signed) *Owen Connellan.*

RETURN from the PROFESSOR of AGRICULTURE.

Name - - - - - -	Professorship of Agriculture.
Date of appointment - - -	August 1849.
Salary - - - - - -	£. 150 per annum.

No official residence or allowance instead thereof.

I hold no other public office or employment.

(signed) *Edmund Murphy,*
Professor of Agriculture.

RETURN from the PROFESSOR of JURISPRUDENCE and POLITICAL ECONOMY.

I BEG to say that I hold the office of Professor of Jurisprudence and Political Economy in Queen's College, Cork; that my salary is 150*l.* a year, and that I have no official residence or allowance for such.

28 February 1857. (signed) *R. H. Mills.*

RETURN from the PROFESSOR of MIDWIFERY.

Name - - - - - -	Joshua Reuben Harvey.
Date of appointment - - -	The opening of the College.
Salary - - - - - -	£. 100 per annum.
Official residence - - - -	None.
Other appointments - - -	Physician to South Infirmary and to Lying-in Hospital.
Salaries - - - - - -	No salary.

(signed) *J. R. Harvey,* M.D.,
Cork, 23 February 1857. Professor of Midwifery.

Queen's College, Cork.

Return from the Professor of English Law.

I respectfully take leave to state that the name of my office in this College is Professor of English Law; the date of my appointment 18th October 1851; the salary 150*l.* per annum; that there is official residence in the College, or allowance instead, provided for me, in consequence of which, I have resided elsewhere ever since my appointment. I have further to state that I hold the office of Crown Prosecutor for the city and county of Limerick, to which there is no salary or endowment annexed; the value of the office depends on the briefs handed to me by the Crown solicitors at each assizes, which of course varies. I was appointed in June 1855.

Queen's College, Cork,
23 February 1857.

(signed) *Michael Barry,*
Professor of English Law.

Return from the Vice-President and Professor of Greek.

Office - - - - - - -	Vice-President.
Date of appointment - - -	30 December 1845.
Salary - - - - - - -	£. 500 per annum.

There is an official residence within the College for the Vice-President, in which he has resided since the opening of the College in October 1849.

The Vice-President has not been absent from his duties in the College a single day from the opening of the College to the date of this Return, excepting one week during the Christmas recess of Session 1851–52, and one week during the Easter recess of Session 1852–53, for the purpose of waiting on the Lord Lieutenant on College business.

No record has been kept of the Midsummer vacation, during which the College is closed, and all business suspended, the care of the College buildings being committed, by the statutes, to the Registrar.

Dr. Ryall holds, in addition to the office of Vice-President, that of Professor of Greek, to which he was appointed on the 5th August 1849.

No salary is attached to the latter office.

The class fees of the students of Greek amount, on an average, to 46*l.* per annum.

23 February 1857.

(signed) *John Ryall,*
Vice-President and Professor of Greek.

Return from the Professor of History and English Literature.

Office - - - - - - -	The Chair of History and English Literature.
Date of appointment - - -	6 August 1849.
Salary - - - - - - -	£. 250 per annum.

There is no official residence, nor any allowance instead thereof, to the Professor of History and English Literature.

I hold no other appointment, nor have any other employment or salary.

23 February 1857.

The

Queen's College, Belfast.

The Vice-President has never been absent from his official residence in the College during the collegiate session since the opening of the College in October 1849, with the exception of two weeks at the end of the session in the year 1854. This absence was occasioned by the serious illness of a member of his family, at that time resident in Germany.

Fellows have not been appointed in this College.

The Professors have no official residence, or allowance instead of a residence, provided for them.

2.—RETURN as to the OFFICIAL RESIDENCES and ATTENDANCE of the PRESIDENT, VICE-PRESIDENT, and PROFESSORS of the QUEEN'S COLLEGES, *Galway*. Queen's College, Galway.

OFFICIAL residences in this College are provided for the President and Vice-President.

Neither residences, or allowances for residences, are provided for the Professors.

As to the times during which the President and the Vice-President resided elsewhere than in the College or official residences from the opening of the College in October 1849 till May 1853, reference is made to a Return made on this subject to the House of Commons, and ordered to be printed on the 23d May 153. [*See* Enclosure (A.)] No record has been kept in College books as to the residence of the President and Vice-President since May 1853.

The President has made the following statement as to his residence elsewhere than in the College or official residence since May 1853:

The collegiate session commences on the third Tuesday of October, and ends on the second Saturday of June.

At the close of the session 1852–53, the President was obliged to remove his family from Galway to near Dublin, as the climate of Galway was found entirely unsuited to one of its members, who labours under extreme and continued delicacy.

Session 1853–54.

The President resided with his family for about five weeks in the spring of 1854. He left the College to attend a deputation to the Lord Lieutenant on the 25th April, and was attacked the same night with scarlatina, which spread to other members of his family, and which rendered it impossible for him to return to the College until the end of May.

Session 1854–55.

The President resided with his family for some weeks in January 1855, and again for a part of March and April. On the former occasion he was compelled to remain with his family, owing to the dangerous illness of one of its members; on the latter, owing to the illness and death of his mother.

Session 1855–56.

The President left the College about the middle of March, as one of a deputation from the Queen's Colleges to London on collegiate business. He was taken ill on the way, and confined to bed for four weeks. Immediately, on recovering, he proceeded to London, where he was occupied on the above business for a fortnight. He was then compelled to go to the Continent for about fourteen days, and returned to the College about the 12th May.

The President is repeatedly obliged to go to Dublin to attend the meetings and the committees of the Queen's University, of which he is *ex officio* a member. He is sometimes obliged to return to his family for some days, owing to the repeated and serious illness of one of its members. But it is impossible for him to state exactly the days and hours during which he may on such occasions have resided out of the College.

During the summer vacations the President repeatedly visits the College, and superintends whatever works may be going on in the several departments.

The Vice-President has made the following statement as to his residence elsewhere than in the College or official residence since May 1853:

I, the Vice-President, resided out of the College and out of Galway for one week, being part of the Easter recess, in 1853, and four weeks in the same year, being part of the summer vacation, and one week, part of the Easter recess, in 1854; from that time to the present, nearly three years, I have continually resided within the College.

I hold no other office or employment.

Queen's College, Galway, 25 February 1857. (signed) *Joseph O'Leary*, V. P.

Queen's College, Galway, 5 March 1857. (signed) *William Lupton*, M. A., Registrar.

Queen's College, Galway.

Enclosure (A.)

EXTRACT from a RETURN made to an Order of the Honourable the House of Commons, dated 18th April 1853, and ordered to be printed by the House of Commons, on the 23d May 1853.

WITH reference to the Return sought for, showing the number of days in each session since the opening of this College, that the respective President, Vice-President, and Members of Council were in attendance at their Colleges, it is observed that no daily record is kept of the attendance or casual absence of these officers; but their general attendance can be stated from their presence at Council, and their performance of other collegiate duties.

The President or Vice-President have not, properly speaking, resided in the College since its opening, as their official residences are still uninhabitable, owing to the very defective manner in which the building of the College has been executed; and the other members of the Council have no residence within the College.

From the defective state of the building, the President has been compelled to provide a residence at a very large expense, near the College, where he has continually resided, except when absent on collegiate or University business, and for some months during the vacations in the years 1850 and 1851.

Session 1849-50.

Each collegiate session commences on the third Tuesday of October, and terminates on the second Saturday of June.

The President was at the College from its opening in October 1849, until the 22d June 1850, with the exception of about five weeks, for part of which time he was engaged in Dublin on collegiate business, and during the remainder was detained by the illness of a near relative.

The Vice-President, the Rev. J. P. O'Toole, having been appointed at the commencement of the second term of the session, in January 1850, attended the College from the period of his appointment to the end of the session, except that he was occasionally absent for a few days.

Session 1850-51.

The President was at the College from before its opening in October 1850 until the 1st of August 1851, more than a month after the College Session, with the exception of about three weeks, when he was engaged in Dublin on collegiate business.

Session 1851-52.

The President has been constantly at the College throughout this session, with the exception of about two months in the spring of 1852, when he was occupied constantly with University business. He has since been repeatedly obliged to attend meetings of the Senate of the Queen's University.

The Vice-President was in attendance at the College from the opening of the session to the 26th March 1852, after which date to the remainder of the session he was absent from the College.

Session 1852-53.

The President has been constantly in attendance from the opening of the session to the present time, except that during the last three weeks he was absent in London on important collegiate business.

The Vice-President, Joseph O'Leary, Esquire, who was appointed in January 1853, came to the College on the 8th February, and has constantly attended to the present date.

QUEEN'S COLLEGES (IRELAND).

RETURN of the Name, Date of Appointment, and Salary of the Presidents, Vice-Presidents, Fellows, and Professors of the QUEEN'S COLLEGES in *Cork*, *Belfast*, and *Galway* respectively, &c.

THE REPORT

OF THE

PRESIDENT OF QUEEN'S COLLEGE, BELFAST,

FOR THE SESSION 1855-56.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

The last Report which I had the honour to submit brought up the proceedings of Queen's College, Belfast, to 1st May, 1854; that which I now present includes an account of its proceedings from the period of its opening, in the year 1849, until the end of the Session 1855–56.

According to the subjoined tabular return of sessional attendance, it will be seen that an unusually large number of non-matriculated Students were enrolled in the first Session, 1849–50—which is to be accounted for by the circumstance of many of these having then entered in order to complete courses that had been partly prosecuted in other Institutions, and of others having waited for more than a year on the postponed opening of the College.

There existed, therefore, at that time an accumulation of non-matriculated Students; so that the College may not be regarded as presenting its natural condition until the Session 1852–53, when the numbers in attendance stood at 154. The return, however, shows a marked and steady progress during the subsequent years, consequent, no doubt, partly on the rising prosperity of the country, and partly on the increasing public demand for sound education.

RETURN of the Total Number of Students attending the College in each year since its opening.

Session.	Matriculated.	Non-Matriculated.	Total.
1849–50,	90	105	195
1850–51,	110	75	185
1851–52,	120	69	189
1852–53,	101	53	154
1853–54,	114	54	168
1854–55,	118	65	183
1855–56,	119	74	193

It will be observed that the matriculated Students have increased from ninety in the first year, to one hundred and nineteen in the last, whilst there still remained seventy-four non-matriculated Students on the list, a large number of whom having belonged to the medical department, attended the full complement of classes required in their years of study respectively.

It is gratifying to be able to record the existence of unabated zeal and efficiency on the part of the Professors of the College, of the extent of whose labours some idea will be conveyed by the Return, No. 3, and by the digest of subjects, page 29, in the Appendix, and who are cordially united in their efforts to advance the high interests committed to their trust.

The success of the Students in competing with those of other Universities and Colleges for public appointments, and with the Students of the Colleges of Cork and Galway, for the honors and emoluments awarded by the Queen's University, is alike a testimony as well to the adaptation of the courses prescribed, as to the excellent instruction imparted in this College.

The principle of mixed education is fully sustained in the College, as is evidenced not only by the accompanying denominational return, but especially by the fact that all creeds receive together in the same halls the advantage of an education such as expanding science and the advancing age require, amidst the existence of perfect harmony and of a generous feeling pervading the whole body of the Students.

DENOMINATIONAL RETURN.

Covenanters,	2	7	7
Seceders,	–	2	2
Independents,	–	–	2
Baptists,	2	–	2
Various,	3	1	1
Total,	168	183	193

The mode of examination for passing, as well as for Honors and Prizes, principally by the use of printed papers, continues to be beneficially employed in the several departments of Arts, Law, and Medicine. The written answers to these, together, generally, with a separate oral examination, enable the Professors and the Council to arrive at a just estimate of merit. A number of these printed papers used every session appear annually in the College Calendar, and will afford an example of the extent and variety of the examinations conducted each year.

The second Triennial Visitation of the College was held on the 18th December, 1855. The following Visitors were present:—

The Right Hon. MAZIERE BRADY, Lord Chancellor.
The LORD BISHOP of DOWN and CONNOR.
The Right Hon. BARON GREENE.
The Rev. ROBERT ALLEN, Moderator of General Assembly.
The Rev. GEORGE ARMSTRONG, President of the Association of the Non-subscribing Presbyterians of Ireland.

REPORT OF VISITATION.

"There was a full attendance of Professors, and 190 Students answered to their names. Two cases of appeal, brought by Students against decisions of the Council respecting the allocation of Scholarships, were considered by the Visitors; and after full inquiry the acts of the Council were confirmed.

"After investigation in regard to the Collegiate duties of the Professors and Students, three of the Deans of Residences who were present gave satisfactory accounts of the conduct of the Students, as well as of their attendance on the religious instruction imparted by them.

"It was reported that the additional Parliamentary grant was productive of great advantage both to Professors and Students, by tending to procure for the Library and Museums the necessary and long required supplies.

"The Lord Chancellor and other Visitors expressed much satisfaction with the condition and prosperity of the College."

The above statement leads me to notice the continued absence of remuneration to the Deans of Residences, who, although being by Statute, and by your Majesty's Warrant, Collegiate Officers, have not yet received any compensation for their services—a circumstance to which I earnestly solicit the attention of your Majesty's advisers.

Whilst the existence of this College has greatly raised and influenced the standard of education in the schools of this province, whose pupils contend for honors, and whose teachers record them when obtained with approbation, I must refer to one great drawback to collegiate advancement, not only in Ulster, but throughout Ireland—viz., the lamentable want of intermediate preparatory schools; a subject already attracting the notice of your Majesty's ministers. The whole of the Collegiate authorities unite in opinion that, education being now adopted by the State, a proper provision ought to be made to encourage higher instruction intermediately between the primary schools and any College which the tastes or objects of Students may incline them to enter.

The instruction given in the primary schools, however valuable for, and adapted to the masses, is, on this very account, necessarily deficient in nature and extent as preparatory for collegiate entrance and advancement; and educational statistics prove that, whilst the establishment of these has tended to reduce greatly the number of Academies in which Classics and Mathematics were formerly taught, the supply of education for the rising classes, always

insufficient in Ireland, is so materially diminished as to require the united aid of Governmental grants and of voluntary effort for its increase and its adaptation to the present demands of the country.

The Medical School, though of great importance to the community and the College, has yet laboured under so peculiar a disadvantage, that I feel bound to submit a special Report regarding it. The progress of that school, even under the disadvantage which I note, is worthy of attention, as proving the necessity for the erection of Dissecting and Anatomical rooms in immediate connexion with the Collegiate buildings.

RETURN of the Number of Medical Students in attendance in each Session.

Session.	Matriculated.	Non-Matriculated.	Total.
1849–50,	28	27	55
1850–51,	20	35	55
1851–52,	25	39	64
1852–53,	29	33	62
1853–54,	29	37	66
1854–55,	39	36	75
1855–56,	33	48	81

In addition to the above, there were in attendance on the classes of Chemistry, Natural History, and Natural Philosophy, some non-matriculated Students, as here enumerated, who did not declare the object of their attendance. About half of these, it is believed, were intended for the medical profession.

Session.	Non-Matriculated.	Session.	Non-Matriculated.
1852–53,	11	1854–5,	12
1853–54,	9	1855–6,	12

The Government having lately required from me a separate return of the Medical and Botanical Departments, I have to state that a steady improvement is to be noticed in the School of Medicine, the number of pupils attending the Medical Classes having increased from fifty-five in the Session of 1849–50, when the College was opened, to eighty-one* in the Session of 1855–56. I have reason to believe that the various Professors in the School of Medicine have performed their duties with zeal and efficiency, and that the Students have derived commensurate advantages from the means of instruction afforded them. This is evidenced by the success of several pupils of the Medical School in the competitive examinations for appointments in the East India Company's service, and by the high position and honors obtained by some of them when graduating in the Queen's University.

I have to express my regret that the numerous applications which have been made to the Government by the authorities of the College for means to erect within the College grounds suitable apartments for the Medical, and more especially the Anatomical department of the College, have not hitherto produced any satisfactory result. The distance from the College of the present dissecting rooms—fully a mile—imposes on the Students a great additional labour, and much loss of time, in going to and fro between the College, (in which the greater number of the lectures are delivered,) and the anatomical rooms, where they dissect and attend the anatomical demonstrations. Many Students having for one or two years experienced the evils resulting from this very defective and injurious arrangement, leave the Queen's College, and betake themselves to other medical institutions in which it appears to them that their interests are more carefully provided for; and, possibly, this may be one of the causes that of the large number of Students attending the Medical School of Queen's College, Belfast, so few take their degrees in the Queen's University in Ireland—the large majority graduating or taking their diplomas in institutions in England or Scotland.

The Professor of Anatomy and Physiology, whose duty it is, in addition to preparing and delivering his lectures at the College, to superintend the department of Practical Anatomy, and whose whole time must necessarily be occupied with his Collegiate duties, feels peculiar inconvenience in many ways from the long distance between the anatomical rooms and his lecture-room and museum, and has frequently, in common with the other Medical Professors, whose collegiate duties are also varied, both in communications to myself, and in representations to the Government, insisted strongly on the evils of so anomalous an arrangement, and on the necessity for an alteration.

Besides, for the anatomical rooms of the Royal Academical Institution, I am

* Besides twelve non-matriculated Students who attended three classes common to Medicine and Arts, but who did not declare their object in attending.

obliged to sanction the payment of rent and incidental expenses, about £40 yearly, out of the Parliamentary grant to the College.

For the number of the lectures delivered in the Medical Department by the Professors in each Session, see Return No. 3 in the Appendix. For the number of Students in each class of the Faculty of Medicine in each Session, see Return No. 1.

An arrangement having been effected between the Directors of the Botanic Garden and the College, for permission of privilege to the latter on the payment of £50 per annum out of the Parliamentary grant, I beg to include also a particular Report under this head:—

The Botanical Department usually commences in the second week of March, and is continued until the end of the College Session in the middle of June. The lectures are attended by Students of Arts, of Agriculture, and Medicine, and are delivered on five days in the week.

In April, May, and the beginning of June, there are extra meetings for instruction in the Botanic Garden, and excursions are made into the country. The additional meetings are usually at least twelve, and are generally well attended by the Students, who, in considerable numbers, have accompanied the Professor to different places in the vicinity, as the Cave Hill, Colin Glen, Newtownards, Bangor, &c.

Cut plants and specimens in pots are almost daily received from the Botanic Garden, as well as large supplies of wild plants for practical demonstration in the lecture-room.

Since the Royal Botanic Garden was made accessible to the Students of this Class, most of them avail themselves of the privilege, which they duly appreciate, and, consequently, their progress in the study of Botany has thus been materially promoted. The course of Botany generally comprehends upwards of seventy meetings. For the number of Students attending the Botanic courses annually, see Return No. 1.

The privileges granted by the Trustees of the Royal Botanic Garden in return for an annual payment of £50 paid by the College out of the Parliamentary grant of £1,600 a-year, are :—

1st. Cut specimens when required by the Professors.

2nd. Loan of plants in pots.

3rd. Students of the classes of Natural History, Agriculture, and Geology, to have free access to the garden by ticket. This privilege extends from 1st March to 30th September.

The Return in the Appendix, No. 4, from the Bursar, will show the general outlay of the Parliamentary grant, for two years, for the Library, Museum, the Departments of Physical and Natural Science, with those of Medicine, Engineering, and Agriculture. I have kept steadily in view the instructions of the Treasury given to me through the Irish Executive regarding the allocation of this grant ; and by fully consulting the Library Committee, the Vice-President and Professors, before the sanction of any outlay, I acquire satisfactory proof that every order is justified by the requirements of the special departments, and is made for the general benefit of the College, intended, for the advantage of the present generation, and future ones, to be a National Repository of books and apparatus, and of objects illustrative of Science, Art, and Literature.

The fees hitherto paid by Students on behalf of the College have been reduced by the above grant, according to the Treasury instructions to, first year's matriculated Students from £2 to 10*s*., and each subsequent year to 5*s*. Non-matriculated Students still pay 5*s*. a-year to the College above their respective class fees. The amount accruing from these sources is regularly accounted for by the Bursar to the Council, and afterwards to the Audit Office, under the Treasury instructions.

I give in the Appendix (No. 5, page 11), as extracted from the Calendar for the Session 1855–56, information on the manner of entering the College, and of proceeding to degrees and diplomas in the Queen's University in Ireland. Also (No. 6, page 16), the collegiate courses for matriculation examination and for scholarships, junior and senior, in the different departments. Also (No. 7, page 24), the Bye-laws of the College with the Library regulations, rules respecting fees, the times of examination, and hours of lectures. And (No. 8, page 29), an enlarged digest of all the subjects taught in the College. All of which is testified on behalf of the College by

Your Majesty's devoted and faithful servant,

P. Shuldham Henry.

APPENDIX.

No. 1.—RETURN of the NUMBER of STUDENTS attending each CLASS in each Year.

Alexander Dickey, *Bursar.*

No. 5.—Of the Manner of Entering the College, and of Proceeding to Degrees and Diplomas in the Queen's University in Ireland, as extracted from the Belfast Queen's College Calendar for the Year 1856.

In order to obtain a Degree or Diploma in the Queen's University, it is necessary to enter the College as a Matriculated Student, to pass the Entrance or Matriculation Examination, and to pursue a fixed Course of Study.

The Matriculated Students may be classified as follow:—

I. Those intending to proceed to the Degrees of A.B. and A.M.
II. ,, ,, Degree of M.D.
III. ,, ,, Diploma of Elementary Law.
IV. ,, ,, Degrees of LL.B and LL.D.
V. ,, ,, Diploma of Civil Engineering.
VI. ,, ,, Diploma of Agriculture.

The College Session commences on the third Tuesday in October, and ends on the second Saturday in June. It is divided into Three Terms.

The First Term commences on the third Tuesday in October, and ends on the 23rd of December.

The Second Term commences on the 7th of January, and ends on the Thursday before Easter Sunday.

The Third Term commences on the Monday week after Easter Sunday, and ends on the second Saturday in June.

Examinations.—The Examinations are conducted in part orally and in part by papers. In the latter case a printed paper, containing a number of questions, is given to each student, who is required to write out then full answers to as many of the questions as he is able to do in the time allowed. The number of questions is not greater than a person well prepared is able to answer in the time allowed.

Faculty of Arts.—The Degrees of A.B. and A.M.

Students intending to proceed to the Degree of A.B. in the Queen's University in Ireland, must enter their names with the Registrar, and pay to the Bursar the fees set forth in p. 26. They must then pass a Matriculation Examination in the English, Latin, and Greek Languages, and the elements of History and Mathematics.

For the details of the subjects of this Examination, see p. 16.

The General Matriculation Examination takes place at the commencement of the first term. The names of those Students who have passed the Examination are declared on the day following; and the fees are returned to those Students who have not passed the Examination.

There is an additional Matriculation Examination in the same subjects, in the second week in November, for those Students who have not presented themselves at, or passed, the General Examination.

They must attend the College Lectures on the preceding subjects in the specified order; and in those cases where the courses extend over the whole three terms, they must attend during the first and second terms at least of each Session.

At the end of each Session there is a "General Examination" in the subjects upon which lectures have been delivered during that Session.

There is also a "Supplementary Examination" in the same subjects, at the commencement of the following Session.

All Students must pass either the "General Examination" or the "Supplementary Examination," before their names can be entered on the College Register as having completed the Session, and no Student will be permitted to proceed with the course of the succeeding year until he have so completed his Session.

Ordinances of the Queen's University for the Degrees of A.B. and A.M., 30th June, amended January, 1855.

The Undergraduate Course in the Queen's Colleges for the Degree of A.B. from the Queen's University shall occupy not less than three Sessions.

Students shall be admitted to examination for this Degree who shall have attended the College Lectures for at least two full terms in each Session, and passed the prescribed College Examinations, and shall be recommended for promotion to the Degree by the President of the College in which their studies have terminated.

Candidates for the Degree of A.B. shall pursue in some one or other of the Queen's Colleges in Ireland the following Course of Study:—

FIRST.

The Greek and Latin Languages, ... Three Terms.
The English Language, . One Term.
The Modern Languages, . Three Terms.
Mathematics, . . . Three Terms.

SECOND.

Logic, ... One Term.
Chemistry, ... Three Terms.
Principles of Zoology and Botany, ... Three Terms.
The Higher Mathematics, or the Greek and Latin Languages, ... Three Terms.

THIRD.

Natural Philosophy, . . Three Terms.
History and English Literature, ... Two Terms.
Physical Geography, . . One Term.
Metaphysics, ... Two Terms.
or
Jurisprudence and Political Economy, each . . One Term

Students must attend, in each Session, Lectures on at least two of the foregoing subjects, and in the order above set down, until the whole course shall be completed. Students who prefer to do so may attend Lectures on three or four of the subjects, but no more in the same Session.

12th February, 1853.

Bachelors of Arts of the Queen's University in Ireland, shall be admissible to the degree of Master of Arts after the expiration of one academical year from the time of their having obtained their Bachelor's Degree.

A Candidate having attended, for at least two terms subsequent to his having received the Bachelor's degree, a course of lectures on some one of the subjects of the course of study he may have selected, may proceed to obtain his Master's degree by examination in any one of the four following courses, viz.:—

1.—*Classics*, which shall be considered as including—The Greek and Latin Classic Authors; Prose Composition in Greek, Latin, and English; a Modern Foreign Language.

2.—English Philology and Criticism.
Logic.
Metaphysics, or (in place of Metaphysics, at the Election of the Candidate) Political Economy and Jurisprudence.

3.—*Mathematical and Physical Science*, which shall be considered as including the following subjects:—

Algebra, including the Theory of Equations.
Analytical Geometry.
Trigonometry, Plane and Spherical.
The Differential and Integral Calculus.
Differential Equations.
Theory of Probabilities.
Statics and Dynamics.
Hydrostatics.
Hydraulics and Pneumatics.
Heat.
Electricity and Magnetism.
Optics.
Plane Astronomy.
Physical Astronomy.

4.—*Experimental and Natural Sciences*, which shall be considered as including the following subjects:—

Experimental Physics.
Laws of Chemical constitution and combination.
General properties and preparation of Organic and Inorganic bodies.
Structure, Functions, and Classification of Animals.
Structure, Functions, and Classification of Vegetables.
Zoological and Botanical Geography.
Elements of General Geology and Palæontology.
Elements of Physical Geography.
Elements of Crystallography and Mineralogy.

Students preparing for the Bar are, by the recent regulations of the Benchers of the King's Inns, enabled to postpone the commencement of keeping their terms in Dublin and London, and the payment of the entrance fees, for a considerable time, by completing their course for the Degree of A.B. in the Queen's College.

Students preparing for the profession of Attorney or Solicitor, can (by 14th and 15th of Vic., c. 88) save two years of their apprenticeship, and postpone the payment of the apprentice fee for that time, by completing their course for the Degree of A.B. in the Queen's College.

Department of Civil Engineering.

Students who are candidates for the Diploma of Civil Engineering must enter their names with the Registrar, and pay to the Bursar the fees set forth in p. 26. They must then pass a Matriculation Examination in History, the English Language, and Mathematics.

For the details of the subjects of this Examination, see p. 16.

The General Matriculation Examination takes place at the commencement of the first term. The names of those Students who have passed the examination are declared on the day following; and the fees are returned to those Students who have not passed the Examination.

There is an additional Matriculation Examination in the same subjects, the second week in November, for those Students who have not presented themselves at, or passed, the General Matriculation Examination.

Ordinance of the Queen's University for the Diploma of Civil Engineering, 31*st October*, 1851, *amended January*, 1855.

Students of Civil Engineering, shall pass a Matriculation Examination, and shall pursue, during at least two years, in one of the Queen's Colleges, the following Courses of Study:—

FIRST COURSE.		SECOND COURSE.	
Mathematics,	Three Terms.	Natural Philosophy,	Three Terms.
Chemistry,	Do.	Motive Powers, Construction, and Theory of Machines,	Do.
Mineralogy, Geology, and Physical Geography,	Do.	Drawing,	Do.
Drawing,	Do.	Civil Engineering, including the principles of Architecture and Engineering Finance,	Do.
Descriptive Geometry, Surveying, and Mapping,	Do.		
Mathematics,	Do.		

Any Student who shall have completed the above Course of Study in any of the Queen's Colleges in Ireland, and shall also have been engaged during at least two years, of which not more than one shall be cotemporaneous with his College Course, in acquiring a practical knowledge of Engineering in all its branches, and of Buildings used for public and domestic purposes, under the direction of an Engineer recognised by the College Council, shall be admitted to Examination for the Diploma of Civil Engineering in the Faculty of Arts.

19*th October*, 1853.

Any person who shall have obtained the Degree of Bachelor of Arts in the Queen's University, may proceed in his Course of Study to obtain the Diploma in Engineering, without repeating any of the Courses he may have already attended; he shall be allowed to enter at once upon the Courses of the second year of Engineering Study, shall be enrolled, and rank as a second year Student of Engineering, and shall be entitled to proceed for his Diploma as such, provided he shall in the subsequent period of his Engineering Studies, have attended the full courses of instruction in Drawing, Mapping, Surveying, and all other subjects, Collegiate and Practical, now required by the Ordinances, but not previously attended or included in his A.B. course.

Department of Agriculture.

Students who are candidates for the Diploma of Agriculture, must enter their names with the Registrar, and pay to the Bursar the fees set forth in p. 26. They must then pass a Matriculation Examination in English Grammar and Composition, and Arithmetic.

The General Matriculation Examination takes place at the commencement of the first term. The names of those Students who have passed the examination are declared on the day following; and the fees are returned to those Students who have not passed the examination.

There is an additional Matriculation Examination in the same subjects, the second week in November, for those Students who have not presented themselves at, or passed, the General Examination.

Ordinance of the Queen's University for the Course of Agriculture, 31*st October*, 1851.

Students in Agriculture, having Matriculated, shall pursue in some one of the Queen's Colleges, the following Courses of Study during at least two years:—

IN THE FIRST YEAR.	
Natural Philosophy,	Three Terms.
Chemistry,	Do.
Principles of Zoology and Botany,	Do.
Theory of Agriculture,	Do.
IN THE SECOND YEAR.	
Mineralogy, Geology, and Physical Geography,	Three Terms.
Surveying and Mapping, and Farm Architecture,	Three Terms.
History and Diseases of Farm Animals,	Do.
Practice of Agriculture, including Farm Finance and Accounts,	Do.

Students who shall have passed through the above Course, and who shall have attended during twelve months, the practical working of a Farm under the direction of an Agriculturist approved by the College Council, will be admitted to Examination for the Diploma of Agriculture in the Faculty of Arts.

Students intending to qualify themselves for the Management of Estates, or of extensive farms, are recommended to attend also Sessional Courses of Instruction in—

1st. The Law of Landlord and Tenant, and the Elements of Conveyancing.

2nd. Elements of Political Economy and Statistics, as applied to Agriculture and Farm Finance.

All Students who shall commence their Courses of Engineering or Agriculture, subsequent to this date, are required to conform to the provisions of this Ordinance, and Students who may have commenced their Courses prior to this date, may avail themselves of the provisions of this present Ordinance, or may proceed for their Diplomas under the Ordinance of the 30th June, 1850, which latter Ordinance, as regards the Courses of Engineering and Agriculture, is hereby repealed, except for such Students as are already in attendance on the College Courses.

Note.—Instructions in Mapping and Surveying required in the Courses for Diplomas in Engineering and Agriculture are to be considered as including regular Practical Exercises and Observations in the Field, with the use of Instruments, continued throughout the Session.

Faculty of Medicine, Degree of M.D.

Students intending to proceed to the Degree of M.D. in the Queen's University in Ireland, must enter their names with the Registrar, and pay to the Bursar the College and Class Fees. They must then pass a Matriculation Examination in the English, Latin, and Greek Languages, and the Elements of History and Mathematics.

For the details of the subjects of this Examination, see p. 16.

The General Matriculation Examination takes place at the commencement of the first term of the Session. The names of the Students who have passed the examination are declared on the day following; and fees are returned to those Students who have not passed the examination.

There are additional Matriculation Examinations in the second and fourth weeks in November for those Students who have not presented themselves at, or passed, the General Matriculation Examination.

They must then pursue the following Courses of Study, as prescribed by the Ordinances of the Queen's University in Ireland.

Ordinance of the Queen's University for the Degree of M.D. 15th March, 1852.

1st.—Every Candidate for the Degree of M.D. shall produce a certificate from the Council of one of the Queen's Colleges, that he has passed a full examination in the subjects of study prescribed in the Course of Matriculation for Arts, and has been admitted a Matriculated Student of the College in the Faculty of Medicine.

2nd. The Curriculum shall extend over a period of at least four years, and shall be divided into periods of at least two years each.

3rd.—The first period shall comprise attendance on the following Courses of Medical Lectures:—

Chemistry—Six Months, at least Three Lectures each week.

Botany and Zoology—Six Months, Three Lectures each week, with Herborizations for practical study.

Anatomy and Physiology—Six Months, Five Lectures each week.

Practical Anatomy—Six Months.*

Materia Medica and Pharmacy—Six Months, Three Lectures each week.

4th. The second period shall comprise attendance on the following Courses of Medical Lectures:—

Anatomy and Physiology—Six Months, Five Lectures each week.

Practical Anatomy—Six Months.*

Theory and Practice of Surgery—Six Months, Three Lectures each week.

Midwifery and Diseases of Women and Children—Six Months, Three Lectures each week.

Theory and Practice of Medicine—Six Months, Three Lectures each week.

Medical Jurisprudence—Three Months, Three Lectures each week.

5th.—In addition to the above Courses of Lectures Candidates shall have attended during the first period of the above Curriculum—

Practical Chemistry (in a recognised Laboratory) Three Months.

Medico-Chirurgical Hospital (recognised by the Senate), containing at least sixty beds; together with the Clinical Lectures therein delivered, at least Two each week—Six Months.

6th.—And during the second period—

Practical Midwifery, at a recognised Midwifery Hospital, with the Clinical Lectures therein delivered, for a period of Three Months, in an Hospital containing not less than thirty beds; or Six Months, in an Hospital containing not less than fifteen beds.

Practical Pharmacy—Three Months.†

Medico-Chirurgical Hospital (recognised by the Senate), containing at least sixty beds; together with the Clinical Lectures therein delivered—Eighteen Months.

7th.—Candidates before being admitted to the Degree of M.D., shall pass two examinations, the first Examination comprising the subjects of the first period of the Curriculum; the second comprehending subjects of the second period of study. It shall be competent for Students to present themselves for their first Examination at the termination of the first period of the Curriculum; or at any after period to be fixed by the Senate previous to their undergoing the second Examination.

8th.—By the Charter of the Queen's University, Candidates are required to have attended *at least one-third of the Courses of Medical Lectures* in some one of the Queen's Colleges. For the remainder of the Courses of Medical Lectures, authenticated Certificates will be received from the Professors or Lecturers in Universities, Colleges, or Schools, recognised by the Senate of the Queen's University in Ireland.

9th.—Candidates will also be required to have attended in some one of the Queen's Colleges, Lectures on one Modern Language for Six Months, and Lectures on Natural Philosophy for Six Months.‡

10th.—The Examinations will be conducted principally by printed papers, to which written answers shall be given, but the Examiners shall also be at liberty to add such *viva voce* Examination on the subjects of the written papers, and to call for such demonstrations and experiments as they may deem necessary.

* On the 20th of July, 1852, the Senate resolved that—

The Courses of Lectures on Practical Anatomy mentioned in the Ordinances are understood to comprise attendance on Anatomical Demonstrations, accompanied with dissections by the Student.

† 26th February, 1853, the Senate resolved—

That for attendance on Practical Pharmacy the Candidate shall produce evidence of his having been engaged for the time specified in compounding medicine, either in the establishment of a legally qualified apothecary, or in the compounding department of some recognised hospital, under the superintendence of the apothecary of the institution.

‡ Candidates will of course be examined in these subjects.

11th.—The above regulations will be binding on all Students commencing their Medical Studies on or after the 1st October, 1852; but Students already engaged in their Medical Studies are at liberty either to complete their Courses according to the Ordinance of the 30th June, 1850, or according to the present Ordinance.

Regulations as to Reception of Certificates from Medical Lecturers and Hospitals.

1.—Colleges or Schools seeking recognition from the Queen's University, are required to send in the name and qualification of the several Lecturers whose Lectures are required to be recognised, with such particulars as the Senate may require. And in the event of the Lecturers being changed, a fresh recognition must be sought.

2.—All Lecturers, and Clinical Lecturers, without exception, must transmit to the Secretary on every 25th November, and 1st of May, or as often as required, a return, filled up according to the form transmitted, of the Students in attendance upon such Lectures or Hospital Practice. The Certificates of Lecturers not complying with this regulation will not be recognised.*

Faculty of Law.

I.—Certificate of the Law Professors, 14 & 15 Vic., cap. 88.

Students intending to proceed for the Certificate of the Law Professors, so as to entitle themselves to serve an apprenticeship of *four* years instead of *five*, under the *Attorneys and Solicitors Regulation Act Amendment Act* (14 and 15 Vict., cap. 88), must enter their names with the Registrar, *either as Matriculated or Non-Matriculated* Students, and pay the necessary College and Class Fees to the Bursar before the commencement of the Law Lectures in each Session.

Such Students must attend the Lectures and pass the examinations prescribed by the Ordinances of the Queen's University for the first and second years of the course of study for candidates for the Diploma of Elementary Law.

II.—The Diploma of Elementary Law.

Students intending to proceed to the Diploma of Elementary Law must enter their names with the Registrar, and pay to the Bursar the fees set forth in page 26, before the commencement of the Law Lectures in each Session, and must pursue the Course of Study prescribed in the Ordinances of the Queen's University in Ireland.

They must attend the Lectures in the prescribed subjects, respectively, during each year. At the commencement of the second and third Sessions, and at the close of the Lectures to the third and fourth year Students there is a General Examination in all the subjects lectured on during the preceding Sessions, which all Students are required to pass.

III.—The Degrees of LL.B. and LL.D.

Students intending to proceed to the Degree of LL.B. and LL.D. must pursue the same course of legal study as candidates for the Diploma of Elementary Law, and must also obtain the Degree of A.B.

The Courses of Study for the Diploma of Elementary Law, and for the Degree of A.B., need not be pursued simultaneously.

After obtaining the Degree of A.B. they must pursue the Course of Study for the *fourth year*:—At the end of the fourth Session, there is an examination in the subjects lectured on during the Session, which all Students are required to pass; and the names of the Students are arranged according to the proficiency they have shown in the subjects of the Examination.

Ordinance of the Queen's University for Degrees and Diplomas in the Faculty of Law, 30th June, 1850, as amended 14th December, 1852.

Students who shall have passed the Matriculation Examination of the Faculty of Law, in one of the Queen's Colleges, and shall have pursued during three years the following Courses of Study, shall be admitted to Examination for the Diploma of Elementary Law:—

IN THE FIRST YEAR.	IN THE SECOND YEAR.	IN THE THIRD YEAR.
The Law of Property and the Principles of Conveyancing. Jurisprudence.	Equity and Bankruptcy. Civil Law.	Common and Criminal Law.

* Returns of Students attending the following Medical Schools and Hospitals have been received during the year ended June, 1853.

MEDICAL SCHOOLS OF—	HOSPITALS.	LYING-IN HOSPITALS.
Trinity College.	Jervis-street.	Rotunda.
Queen's College, Belfast.	City of Dublin.	Coombe.
Queen's College, Cork.	House of Industry.	Cork.
Queen's College, Galway.	St. Vincent's.	
Royal College of Surgeons.	S. and N. Infirmary, Cork.	
Apothecaries' Hall.	Meath.	
Edinburgh Surgeons' Hall.	Belfast.	
Carmichael School.	Mercer's.	
Original, Peter-street.	Galway Infirmary.	
Dublin, Peter-street.		

Students who purport to present themselves for examination for Medical Degrees in the Queen's University, should ascertain that their names are returned for any Medical Lectures they may attend, lest in consequence of such returns not having been supplied, their qualifications should be deemed insufficient when they so present themselves: and Lecturers who are willing to make the required returns, and who have not received the necessary forms through the Registrars of the respective Institutions, should cause application to be made to them.

Candidates for the Degree of LL.B. will be admitted to Examination for that Degree from the Queen's University in Ireland, provided they shall have proceeded to the Degree of A.B., and shall have attended the Lectures and passed the Examinations prescribed for the Elementary Course, and shall also have pursued the following Course of Study:—

IN THE FOURTH YEAR.

A more extended Course of Study of the subjects appointed for the Elementary Course, together with a Course of Study of the Law of Evidence and Pleading in the Courts of Common Law and Equity, of Medical Jurisprudence, and of Constitutional, Colonial, and International Law.

Candidates for the Degree of LL.D. will be admitted to Examination for that Degree from the Queen's University in Ireland at the expiration of three years after they shall have obtained the Degree of LL.B.

No. 6.—COLLEGIATE COURSES.

MATRICULATION EXAMINATION.

FACULTIES OF ARTS, MEDICINE, AND LAW.

Subjects and Times of Examinations.

The Greek Language.—Friday, October 24, 9—12, A.M.

Any two of the following Authors which the candidate may select.

HOMERUS.—Ilias. Books I., II.
EURIPIDES.—Alcestis.
XENOPHON.—Anabasis. Books I., II.
LUCIANUS.—Walker's Selections.

The Latin Language.—Friday, October 24, 2—5, P.M.

Any two of the following Authors which the candidate may select.

HORACE.—Odes, Book I—IV., and Satires.
QUINTUS CURTIUS.—Books III., IV.
VIRGIL.—The Æneid. Books I., II., III., IV.
LIVY.—Books I., II.
SALLUST.—The Conspiracy of Catiline, and the Jugurthine War.
CÆSAR.—The Gallic War. Any two Books.

Re-translation from English into Latin of portions of Cæsar.

History and the English Language.—Saturday, October 25, 9—12, A.M., and 2—5, P.M.

GRAMMAR.—English, and Composition.
HISTORY.—Grecian, Outlines of, to the death of Alexander the Great.
GEOGRAPHY.—Ancient and Modern, Outlines of.

The Histories of Greece, by the Society for the Diffusion of Useful Knowledge, and by Dr. Smith, are recommended.

Mathematics.—Thursday, October 23, 2—5, A.M.

EUCLID.—The First and Second Books, including the Definitions and Axioms.

The Text of Dr. Simpson is adopted.

ARITHMETIC.—Explanation of the common system of Numerical Notation.

The Nature and Use of Vulgar and Decimal Fractions, comprising the rules for their Addition, Subtraction, Multiplication, Division, and Reduction, with the reasons for those rules.

Practice.

The Rule of Proportion.

Simple Interest and Discount.

The Extraction of the Square Roots of whole numbers and of Decimals.

ALGEBRA.—Explanation and Use of the Algebraical Signs, $+ - \times \div =$.

Nature and Use of the Bracket or Vinculum, with the changes to be made in Algebraical Expressions on its introduction or removal.

Addition, Subtraction, Multiplication, and Division of Algebraical Expressions.

Explanation of the meaning of an Index.

Proof of the equation $a^m a^n = a^{m+n}$.

Reduction of Algebraical Expressions to their simplest forms.

The solution of Simple Equations.

In the preceding cases the Student is required, when called on, to give the Demonstration and Explanation of the Rule employed, and its application to particular Examples.

The Examination in Euclid is conducted orally. The Examination in Arithmetic and Algebra is by printed questions, to which the Student is required to write the answers.

SCHOOL OF CIVIL ENGINEERING.

Subjects and Times of Examination.

HISTORY and the English Language.—(See above.)—Saturday, October 25, 9—12, A.M., and 2—5, P.M.

MATHEMATICS.—(See above.)—Thursday, October 23, 2—5, P.M.

School of Agriculture.

Subjects and Times of Examination.

Grammar, English, and Composition.—Saturday, October 25, 9—12, A.M.
Arithmetic, The Elements of.—Thursday, October 23, 2—5, A.M.

Scholarships.

Forty-five Junior Scholarships and Ten Senior Scholarships have been founded in the College.

Of the Junior Scholarships—

Thirty, of the value of £24 each, are appropriated to Students pursuing the course prescribed for the Degree of A.B.

Six, of the value of £20 each, are appropriated to Students pursuing the course prescribed for the Degree of M.D.

Three, of the value of £20 each, are appropriated to Students pursuing the course prescribed for the Diploma of Elementary Law, and the Degree of LL.B.

Two, of the value of £20 each, are appropriated to Students pursuing the course prescribed for the Diploma of Civil Engineering.

Four, of the value of £15 each, are appropriated to Students pursuing the course prescribed for the Diploma of Agriculture.

These Scholarships are awarded annually by examination, and are tenable for one year only; but the Scholars of each year are not disqualified from being candidates for Scholarships the succeeding year.

Junior Scholars are required to take charge of the rolls of the classes, to register the attendance of the Students at Lectures, and to assist the Professors in the arrangement for the Lectures, under such regulations as the Council shall prescribe.

Art Scholarships.

Of the Thirty Junior Scholarships apportioned to Students in the Faculty of Arts—Fifteen are awarded for proficiency in Literature, viz.:—

Five to Students commencing the First year of their course.
Five „ „ Second year.
Five „ „ Third year.

Fifteen for proficiency in Science, viz.:—

Five to Students commencing the First year of their course.
Five „ „ Second year.
Five „ „ Third year.

Candidates for Scholarships of the First year must have passed the Matriculation Examination.

Candidates for Scholarships of the Second year must have completed the First year of their course.

Candidates for Scholarships of the Third year must have completed the First and Second years of their course.

The Scholarship Examinations take place at the commencement of the session.

For the days and subjects of Examination, see p. 19, *et seq.*

No Student shall be admitted to Examination for Scholarships of the Second and Third years unless he shall have attended all the Lectures and Examinations prescribed for the preceding year or years of the Course in Arts; but a Student may extend his attendance on the Lectures prescribed for any one year over two Collegiate sessions, provided he shall attend at least two courses of Lectures in each session.

The following are the Lectures prescribed for the First, Second, and Third years of the course in Arts:—

FIRST YEAR.

The Greek and Latin Languages, ... Three Terms.
The English Language, . One Term.
A Modern Language, . . Three Terms.
Mathematics, . . . Do.

SECOND YEAR.

Logic, ... One Term.
Chemistry, ... Three Terms.
Principles of Zoology and Botany, ... Do.
The higher Mathematics, or the Greek and Latin Languages, ... Three Terms.

THIRD YEAR.

Natural Philosophy, . . Three Terms.
History and English Literature, ... Two Terms.
Physical Geography, . . One Term.
Metaphysics, . . . Two Terms.
or
Jurisprudence and Political Economy, each . . One Term.

Every Student of the Faculty of Arts shall, as heretofore, pay the fees prescribed for each year of the Course in Arts on commencing his attendance on the Lectures prescribed for that year.

Every Student who shall avail himself of the above privilege of attending only a part of the College Lectures during the year of his Scholarship, shall be required to devote himself specially to the business of the Lectures he attends, and to assist the Professors at such times and in such ways as the Council shall from time to time prescribe, and shall not be permitted to hold any office or employment which the Council shall consider to be incompatible with the due discharge of his College duties.

Engineering Scholarships.

Of the Two Scholarships appropriated to Students of Civil Engineering—

One is confined to Students of the First year.
One „ „ Second year.

Candidates for the Engineering Scholarship of the First year must have passed the Matriculation Examination.

Candidates for the Engineering Scholarship of the Second year must have completed their First session, and passed the General or Supplementary Examination.

The Scholarship Examination takes place at the commencement of the first term of the session.

For the days and subjects of Examination, see p. 21.

Agricultural Scholarships.

Of the Four Scholarships appropriated to Students of Agriculture—

Two are awarded to Students of the First year.
Two „ „ Second year.

Candidates for Agricultural Scholarships of the First year must have passed the Matriculation Examination.

Candidates for Agricultural Scholarships of the Second year must have completed the first session of their course, and passed the General or Supplementary Examination.

For the days and subjects of Examination, see p. 21.

Medical Scholarships.

Of the Six Junior Scholarships appropriated to Students of the Faculty of Medicine—

Two will be awarded to Students commencing the First year of their course.
Two „ „ „ Second year.
Two „ „ „ Third year.

The Examination for Junior Scholarships of the First year in the Faculty of Medicine is open to all Students who have passed the Matriculation Examination.

The Examination for Junior Scholarships of the Second and Third years in the Faculty of Medicine, takes place at the commencement of the Second and Third years of the course prescribed to Matriculated Students in Medicine; and is open to all Students who have passed the Examinations, and attended the Lectures prescribed in the preceding part of that course.

Matriculated Students in Medicine intending to compete for Medical Scholarships of the Second year must be of not more than one year's standing, and must have attended subsequently to Matriculation, in some of the Queen's Colleges, or in an University capable of granting Degrees in Medicine, two, at least, of the following courses, viz.: Chemistry—Botany and Zoology—Anatomy and Physiology—Materia Medica and Pharmacy—Practical Chemistry—Practical Anatomy.

Matriculated Students in Medicine intending to compete for Medical Scholarships of the Third year must be of two years' standing, and not more—and must have attended subsequently to Matriculation, in some one of the Queen's Colleges, or in an University capable of granting Degrees in Medicine, four, at least, of the following courses, viz.: Chemistry—Botany and Zoology—Anatomy and Physiology—Materia Medica and Pharmacy—Practical Chemistry—Practical Anatomy.

Matriculated Students in Medicine intending to compete for Senior Medical Scholarships must be of three years' standing, and not more, and must in addition to the qualifications prescribed in the preceding paragraph have attended in their third year, two, at least, of the following courses, viz.: Theory and Practice of Medicine—Theory and Practice of Surgery—Midwifery and Diseases of Women and Children. To acquire a year's collegiate standing, the Student must attend in that year, and subsequently to Matriculation at least.

Junior Scholars in the Faculty of Medicine of the First and Second years must respectively attend during the year of their Scholarships, two, at least, of the following courses, viz.: Chemistry—Botany and Zoology—Anatomy and Physiology—Materia Medica and Pharmacy—Practical Chemistry—Practical Anatomy.

Junior Scholars of the Faculty of Medicine of the Third year must attend during the year of their Scholarships, two, at least, of the following courses, viz.: Theory and Practice of Medicine—Theory and Practice of Surgery—Midwifery and Diseases of Women and Children—Medical Jurisprudence.

Senior Scholars of the Faculty of Medicine must attend during the year of their Scholarship, two, at least, of the following courses, viz.: Theory and Practice of Medicine—Theory and Practice of Surgery—Midwifery and the Diseases of Women and Children—Medical Jurisprudence.

For the days and subjects of Examination, see p. 23.

Law Scholarships.

Of the Three Scholarships appropriated to the Faculty of Law—

One will be awarded to a Student of the First Year.
One „ „ „ Second Year.
One „ „ „ Third Year.

Candidates for the Law Scholarship of the First year must have passed the Matriculation Examination, and entered as Students in the Faculty of Law before presenting themselves for the Scholarship Examination.

Candidates for the Law Scholarship of the Second or Third year must have passed the Matriculation Examination, and have completed the first or second session of the course in the Faculty of Law, previously to presenting themselves for the Scholarship Examination.

The Scholarship Examinations will be held at the commencement of the College Session, For days and subjects of Examination, see p. 23.

Senior Scholarships.

Of the Ten Senior Scholarships of the value of £40 each—
Seven are appropriated to Students who have proceeded to the Degree of A.B.
Two are appropriated to Students who have completed the course of study of the First, Second, and Third years, prescribed to candidates for the Degree of M.D.
One is appropriated to Students who have proceeded to the Degree of A.B., and completed the course of legal study prescribed for the Degree of LL.B.

All the Senior Scholarships are awarded by examination, and are tenable for one year only.

Senior Scholars are required to assist the Professors in the Matriculation and Class Examinations, and in conducting the business of the special departments of Literature and Science to which their Scholarships severally belong, under such regulations as the Council shall prescribe.

Senior Arts Scholarships.

Of the Seven Senior Scholarships appropriated to the Faculty of Arts, one is awarded for proficiency in each of the following departments—

1. The Greek and Latin Languages, and Ancient History.
2. The Modern Languages and Modern History.
3. Mathematics.
4. Natural Philosophy.
5. Metaphysical and Economical Sciences.
6. Chemistry.
7. Natural History.

Senior Medical Scholarships.

Of the Two Senior Scholarships appropriated to the Faculty of Medicine, one is awarded for proficiency in each of the following departments—

1. Anatomy and Physiology.
2. Therapeutics and Pathology.

Senior Law Scholarship.

The Senior Law Scholarship will be awarded by examination to the most distinguished Student who shall have proceeded to the Degree of Bachelor of Arts, and shall have completed the course of legal study prescribed to candidates for the Degree of Bachelor of Laws in the Queen's University in Ireland.

Literary Scholarships of the First Year.

Subjects and Times of Examination.

The Greek Language.—Thursday, October 30, 9—12, A.M.; Friday, October 31, 2—5, P.M.

Homerus.—Ilias, Books I. II. III. IV.
Euripides.—Alcestis.
Xenophon.—Anabasis, Books I. II. III. IV.
Lucianus.—Walker's Selections.

The Latin Language.—Thursday, October 30, 2—5, P.M.; Friday, October 31, 9—12, A.M.

Virgil.—The Æneid, Books VII.—XII. inclusive.
Horace.—The Odes, Books I.—IV. inclusive, and the Satires.
Cæsar.—Gallic War, Books I.—IV. inclusive.
Cicero.—Select Epistles contained in Long's Edition of the De Senectute.
Composition in Latin Prose.

History and the English Language.—Wednesday, October 29, 2—5, P.M.

Original Essays in English, on subjects proposed by the Examiner.
Outlines of English History.
Roman History, to the death of Nero.

Literary Scholarships of the Second Year.

Subjects and Times of Examination.

The Greek Language.—Wednesday, October 22, 2—5, P.M.; Thursday, October 23, 9—12, A.M

Homerus.—Ilias, Books XIX. XX. XXI. XXII.
Plato.—Phaedrus.
Demosthenes.—Contra Midiam.
Æschylus.—Prometheus Vinctus.
Composition in Greek Prose or Verse.

The Latin Language.—Saturday, October 25, 9—12, A.M., and 2—5, P.M.

Cicero.—Tusculan Questions, Books I. II.
Cicero.—Oratio pro Caecina.
Juvenal.—Satires, I. III. IV. V. VII. VIII. X. XIII. XIV.
Livy.—Book XXII.
Composition in Latin Prose.

The English Language.—Monday, October 27, 2—5, P.M.

The Origin, Progress, and Formation of the English Language.
English Composition.

Modern Languages.—Friday, October 24, 9—12, A.M., and 2—5, P.M.

French.	OR,	*German.*
Bruys et Palaprat.—Le Grondeur.		Göthe—Faust.
Translation from French into English.		Translation from German into English.
Translation from English into French.		Translation from English into German.
History of French Literature during the 17th and 18th centuries.		History of German Literature as far as Klopstock.

Literary Scholarships of the Third Year.

Subjects and Times of Examination.

The Greek Language.—Thursday, October 30, 9—12, A.M.; Friday, October 31, 2—5, P.M.

Hesiodus.—Theogonia.
Æschylus.—Choëphoroi.
Herodotus.—Book IV.
Thucydides.—Book I.
Pindarus.—Pythian Odes.
Composition in Greek Prose and Verse.

The Latin Language.—Tuesday, Oct. 28, 2—5, P.M., and Thursday, Oct. 30, 2—5, P.M.

Lucretius.—Book II.
Plautus.—One Play, to be hereafter fixed.
Horace.—Epistles.
Cicero.—De Finibus, Books I. III. V.
Tacitus.—Annals, Books I.—IV., inclusive.
Composition in Latin Prose and Verse.

Modern Languages.—Wednesday, October 29, 9—12, A.M., and 2—5, P.M.

French.	OR,	*German.*
Molière.—De Malade Imaginaire.		Lessing.—Emilia Galotti.
Translation from French into English.		Translation from German into English.
Translation from English into French.		Translation from English into German.
History of French Literature as far as the reign of Louis XIV.		History of German Literature, from Klopstock to Schiller, inclusive.

Science Scholarships of the First Year.

Subjects and Times of Examination. Tuesday, October 28, 9—12, A.M., and 2—5, P.M.

Euclid.—Books I. II. III. IV. and VI.; with the definitions of the Fifth Book.
Arithmetic.—The same as for Matriculation. See p. 16.
Algebra.—The portions required for Matriculation (see p. 16), together with
Proofs of the Rules for finding the greatest Common Measure and least Common Multiple of two numbers.
Explanation of the meaning of Negative and Fractional Indices.
Extraction of the Square Roots of Algebraical expressions.
The solution of Simple Equations involving two unknown quantities.
The solution of Quadratic Equations.
Easy problems producing such Equations.
Algebraical theory of Proportion.
Proof that quantities which satisfy the Algebraical definition also satisfy the Geometrical definition.

Arithmetical and Geometrical Progression.
Definition of a Logarithm, and description of a table of Logarithms.
Proof of the Rules for performing Multiplication, Division, Involution, and Evolution, by Logarithms.
Proof of the Rule for finding the characteristic of the Logarithm of a number either greater or less than unity.
Easy questions arising immediately out of the preceding.

TRIGONOMETRY.—Explanation of the method of representing numerically the magnitude of lines and angles.
Explanation of the circular measure of an angle.
Definitions of the Trigonometrical ratios.
Relations of the Trigonometrical ratios to one another.
Formulæ for finding the sine, cosine, and tangent of twice an angle and of half an angle.
Description of Logarithmic tables of sines, cosines, &c.
Relations among the sides and angles of a triangle.
The solutions of triangles.
Easy questions arising immediately out of the preceding.

SCIENCE SCHOLARSHIPS OF THE SECOND YEAR.

Subjects and Times of Examination. Tuesday, October 28, 9—12, A.M., and 2—5, P.M.

EUCLID.—Books I.—IV. with VI., and portions of Books XI. and XII.
ALGEBRA.
PLANE TRIGONOMETRY.
CONIC SECTIONS.—The principal properties proved Geometrically.
PLANE CO-ORDINATE GEOMETRY, the Elements of.
THE DIFFERENTIAL CALCULUS, so far as to include the differentiations of functions of one variable.

SCIENCE SCHOLARSHIPS OF THE THIRD YEAR.

Subjects and Times of Examination.

MATHEMATICS, Saturday, October 25, 9—12, A.M., and 2—5, P.M.
LOGIC, Wednesday, October 22, 9—12, A.M.
CHEMISTRY, Thursday, October 23, 9—12, A.M., and 2—5, P.M. Or,
NATURAL HISTORY, Monday, October 27, 9—12, A.M., and 2—5, P.M.
METAPHYSICS, Wednesday, October 23, 2—5, P.M.
Locke's Essay, Books I. II.
Cousin's Review of Locke, c. I. to IV. inclusive. Or,
NATURAL PHILOSOPHY, Tuesday, October 28, 2—5, P.M.
Galbraith and Haughton's Elementary Treatise on Mechanics.

ENGINEERING SCHOLARSHIPS OF THE FIRST YEAR.

Subjects and Times of Examination. Tuesday, October 28, 9—12, A.M., and 2—5, P.M.

The same as for Science Scholarships of the First Year.—(See p. 20.)

ENGINEERING SCHOLARSHIPS OF THE SECOND YEAR.

Subjects and Times of Examination.

MATHEMATICS of the Science Scholarships of the Second Year. (See above.) Tuesday, October 28, 9—12, A.M., and 2—5, P.M.
CHEMISTRY.—Thursday, October 23, 9—12, A.M., and 2—5, P.M.
MINERALOGY AND GEOLOGY.—Monday, October 27, 9—12, A.M.
Elements of General Geology.
Elements of Palæontology, as far as the more common Genera, and the more characteristic species of each formation.
Elements of Crystallography, as far as the more common secondary forms, the laws of symmetry, and the notation both of Miller and of Naumann.
Elements of Mineralogy, as far as the characteristics of the mineral species entering into the composition of rocks, and those of economic value.
SURVEYING.—Saturday, October 25, 9—12, A.M., and 2—5, P.M.

AGRICULTURAL SCHOLARSHIPS OF THE FIRST YEAR.

Subjects and Times of Examination.

GRAMMAR, English, and Composition. } Wednesday, October 29, 2—5, P.M.
GEOGRAPHY, Modern, Outlines of. }
ARITHMETIC, the first four Rules. }
Vulgar and Decimal Fractions. }
Involution and Evolution. } Tuesday, October 28, 9—12, A.M.
Proportion and Simple Interest. }
MENSURATION. }

AGRICULTURAL SCHOLARSHIPS OF THE SECOND YEAR.

Subjects and Times of Examination.

MECHANICS and Hydrostatics. Wednesday, October 29, 2—5, P.M.
CHEMISTRY, and the General Principles of Heat. Thursday, October 23, 2—5, P.M.
BOTANY and Zoology, Elements of. Monday, October 27, 9—12, A.M., and 2—5, P.M.
THEORY and Composition of Manures. } Wednesday, October 29, 9—12, A.M.
FEEDING of Farm Animals. }

SENIOR SCHOLARSHIPS IN THE FACULTY OF ARTS.

Subjects and Times of Examination.

I. For the Scholarship in the Greek and Latin Languages and Ancient History.

The Greek Language.—Wednesday, October 22, 9—12, A.M., and 2—5, P.M.

ÆSCHYLUS.—Agamemnon, Choephoroi, and Eumenides.
PINDAR.—The Olympian Odes.
THUCYDIDES.—Book I.
ARISTOTLE.—Fitzgerald's Selection from the Nicomachean Ethics.
Original Composition in Greek Prose and Verse.

The Latin Language.—Tuesday, October 21, 9—12, A.M., and 2—5, P.M.

CICERO.—De Finibus.
CICERO.—Actiones Verrinæ, viz., Divinatio, Actio Prima Accusatio, Lib. I. and V.
TACITUS.—Annals.
LIVY.—XXI.—XXIV. inclusive.
LUCRETIUS.—Books I. II.
PLAUTUS.—Aulularia and Captivei.
VIRGIL.—Georgics.
HORACE.—Satires and Epistles.
Composition in Prose and Verse.
Roman History, from the foundation of the city to the death of the Emperor Nero.

II. For the Scholarship in the Modern Languages and Modern History.

The German Language.—Friday, October 24, 9—12, A.M., and 2—5, P.M.

GÖTHE.—Egmont.
SCHILLER.—Wilhelm Tell.
An extensive course of the History of German Literature.
Translation from German into English and from English into German.

The French Language.—Friday, October 24, 9—12, A.M., and 2—5, P.M

ANDRIEUX.—Contes en vers.
BICHAT.—Sur la vie et la mort.
An extensive course of the History of French Literature.
Translation from French into English, and from English into French.

Modern History.—Saturday, October 25, 9—12, A.M., and 2—5, P.M.

HALLAM's Middle Ages, with the Supplemental Notes.

III. For the Scholarship in Mathematics.

Mathematics.—Thursday, October 23, 9—12, A.M., and 2—5, P.M.

IV. For the Scholarship in Natural Philosophy.

Natural Philosophy.—Wednesday, October 29, 9—12, A.M., and 2—5, P.M.

V. For the Scholarship in Metaphysical and Economical Science.

Metaphysics.—Friday, October 31, 9—12, A.M., and 2—5, P.M.

LOCKE's Essay, B. IV.
REID's Essays on the Intellectual Powers.
STEWART's Dissertation on Metaphysical Science.
COUSIN's Review of Kant.
HAMILTON's Dissertations, appended to Reid. Note A.
EPITOME of History of Philosophy. Greek Philosophy and Modern Philosophy, from Bacon to end, together with Lectures on Metaphysics in preceding Session.

Political Economy and Jurisprudence.—Thursday, October 30, 9—12, A.M., and 2—5, P.M.

POPULAR FALLACIES on General Interests. Bastiat. *Pub. in Par. Lib.*
ADAM SMITH's Wealth of Nations.
SENIOR's Political Economy.
HUSKISSON's Pamphlet, "The Question of the Currency Stated."
R. H. WALSH on Metallic Currency.
REDDIE's Inquiries in the Science of Law (*second edition*, 1847.)
BENTHAM, Selections from Dumont's Digest.
And the Lectures on Political Economy and Jurisprudence, for Students of the Faculty of Arts, in the preceding Session.

VI. For the Scholarship in Chemistry.

Chemistry.—Tuesday, October 28, 9—12, A.M., and 2—5, P.M.

VII. For the Scholarship in Natural History.

Natural History.—Monday, October 27, 9—12, A.M., and 2—5, P.M.

MEDICAL SCHOLARSHIPS OF THE FIRST YEAR.

Subjects and Times of Examination.

Days of Examination the same as for the Literary and Science Scholarships of the first year.

For one Scholarship, the course prescribed for Literary Scholars of the first year in the Faculty of Arts. (See p. 19.)

For the other Scholarship, the course prescribed for Science Scholarships of the first year in the Faculty of Arts. (See p. 20.)

If at either of these Examinations a competent candidate should not present himself, the Scholarship assigned to that department may be awarded to the other department, if there be two duly qualified candidates.

MEDICAL SCHOLARSHIPS OF THE SECOND YEAR.

Subjects and Times of Examination.

A MODERN LANGUAGE, Friday, October 24, 9—12, A.M., and 2—5, P.M.
CHEMISTRY, Thursday, October 23, 9—12, A.M., and 2—5, P.M.
BOTANY, Monday, October 27, 2—5, P.M.
ANATOMY and Physiology, Tuesday, October 28, 2—5, P.M.

MEDICAL SCHOLARSHIPS OF THE THIRD YEAR.

Subjects and Times of Examination.

PRACTICAL Chemistry, Wednesday, October 29, 9—12, A.M.
ANATOMY and Physiology, Tuesday, October 28, 2—5, P.M.
ZOOLOGY, Monday, October 27, 2—5, P.M.
MATERIA Medica, Thursday, October 30, 9—12, A.M.
PHYSICS, Wednesday, October 29, 2—5, P.M.

SENIOR (OR FOURTH YEAR) MEDICAL SCHOLARSHIPS.

Subjects and Times of Examination.

For the Scholarship in ANATOMY and PHYSIOLOGY.

ANATOMY and Physiology, Friday, October 31, 9—12, A.M., and 2—5, P.M.
SURGICAL Anatomy, Thursday, October 30, 2—5, P.M.
PRACTICE of Surgery, including Surgical Pathology, Wednesday, October 29, 2—5, P.M.

For the Scholarship in THERAPEUTICS and PATHOLOGY.

PRACTICE of Medicine, including Medical Pathology, Wednesday, October 29, 9—12, A.M.
PRACTICE of Midwifery, Tuesday, October 28, 2—5, P.M.
MEDICAL Jurisprudence, Thursday, October 30, 9—12, A.M.

LAW SCHOLARSHIP OF THE FIRST YEAR.

Subjects and Times of Examination.

Monday, December 8, and Tuesday, December 9.

STEPHEN'S Commentaries on the Laws of England, Vol. I. Book II. Part I., or BLACKSTONE'S Commentaries, Vol. II. (*a late edition*); or WILLIAMS' Law of Real Property.
REDDIE'S Inquiries in the Science of Law, without the Continuation.
LORD BACON'S Tract on Universal Justice, by D. C. Heron.
ELEMENTS of Jurisprudence. (*Dublin*, 1852.) Part I. Codification.
ADAM SMITH'S Wealth of Nations, Book III.

LAW SCHOLARSHIP OF THE SECOND YEAR.

Subjects and Times of Examination.

Monday, December 8, and Tuesday, December 9.

STEPHEN'S Commentaries on the Laws of England, Vol. I. or BLACKSTONE'S Commentaries, (*a late edition.*)
STORY'S Equity Jurisprudence, Vol. I.
REDDIE'S Inquiries in the Science of Law. (*Second edition*, 1847.)
JURISPRUDENCE, Elements of. (*Dublin*, 1852.)
LORD BACON'S Tract on Universal Justice, translated by Professor Heron. (1852.)
ADAM SMITH'S Wealth of Nations, Book III.
GIBBON'S Survey of the Roman Law, (ch. 44, in Decline and Fall of the Roman Empire, published separately, with notes by Gardner.)
The Lectures of the Law Professors for the preceding Session, on the Law of Property, and on Jurisprudence.

LAW SCHOLARSHIP OF THE THIRD YEAR.

Subjects and Times of Examination.

Monday, December 8, and Tuesday, December 9.

GIBBON'S Survey of the Roman Law.
JUSTINIAN, Institutes of. Published with Translation by Lyon. (*Edin.*, 1844)
BOWYER'S Commentaries on the Modern Civil Law.
ADDISON'S Law of Contracts.
STORY'S Equity Jurisprudence.
The Lectures of the Law Professors for the preceding Session, on Equity and on Civil Law.

LAW SCHOLARSHIP OF THE FOURTH YEAR.

Subjects and Times of Examination.

At the close of the Lectures.

TAYLOR on Evidence.
SUGDEN on Powers.
JARMAN on Wills.
BECK'S Medical Jurisprudence.
HALLAM'S Middle Ages, Ch. VIII., and Constitutional History
LEWIS on the Government of Dependencies.
REDDIE'S International Law.
STORY'S Conflict of Laws.
The Lectures of the Law Professors in the fourth year, in the Law of Evidence and Procedure, and in Constitutional, Colonial, and International Law.

No. 7.—BYE-LAWS.

1. All Matriculated Students are required to wear a cap and gown.
2. A penalty of sixpence shall be imposed upon any Student who shall appear within the College bounds without his cap and gown.
3. The Porter in charge at the lodge is instructed to report to the Bursar the name of any Matriculated Student who shall appear within the College bounds, not wearing his cap and gown, and also to intimate to the Student, at the time, that he will be so reported.
4. Any Student so reported shall pay the fine to the Bursar within one week, without receiving further notice, and the fine shall be doubled every week that it remains unpaid.
5. Students in the several Faculties of Arts, Medicine, and Law, and in the departments of Civil Engineering and Agriculture, are required to attend all the Lectures in the Courses prescribed to them respectively.
6. No Student will have his name entered on the College Register, as having completed his Session, who shall have absented himself from more than one-sixth of the Lectures in any one of the courses prescribed, except on account of severe and protracted illness, when his case will be specially considered by the Council.
7. In case of absence arising from illness or other unavoidable cause, the Student is to lodge with the Registrar, immediately on re-commencing his attendance, a letter or certificate, explaining the cause of his absence, to be laid before the Committee of Council, which will meet each alternate Saturday, at 10½ o'clock, A.M., during the Session.
8. Each Professor is empowered to deprive any Student of credit for attendance at the Lecture of the day, if, when called on, he be not prepared with the business of the class, and it appear to the Professor that such want of preparation arises from idleness.
9. If any Student be deprived four times of credit for attendance at the same course of Lectures, the Professor shall report the case to the Council.
10. A Professor may inflict a moderate fine on any Student for any breach of discipline in his class which he does not consider of sufficient importance to bring under the notice of the Council.
11. No Student, being under the age of twenty-one years, shall be a member of any Society formed for discussing party politics, or shall take any active part in any public meeting, or sign any public document, for like purposes: any Student violating this Rule shall, for the first offence, be liable to rustication for a period not exceeding one year, and, for a second offence, to expulsion. The Council may impose a lighter punishment.

LIBRARY REGULATIONS.

1. The Library is open on every week-day, during the College Terms, from 10, A.M., till 3, P.M., except on Saturdays, when it closes at noon.
2. The Library is open on Mondays, Wednesdays, and Fridays, from 11, A.M., till 3, P.M., during the Christmas and Easter Recesses and the Long Vacation, except during the month of August, when it is entirely closed.
3. A Student desiring a book for consultation in the Library is to fill up a "Consultation Ticket," and present it to the Librarian, and is held responsible for the book till he return it to the Librarian, and receive back his Consultation Ticket.
4. A Student desiring to borrow a book from the Library, is to fill up a "Loan Ticket" and present it to the Librarian, and is held responsible for the book so borrowed till he return it to the Librarian and receive back his Loan Ticket.

5. No Student can have more than two volumes on loan from the Library at the same time.

6. No volume borrowed from the Library is to be retained longer than fourteen days, under a penalty of 1*d.* for every day beyond that time; but the borrower, on returning the book, may renew the loan, if the book has not in the mean time been applied for.

7. Any Student on receiving at any time a notice from the Librarian, must return, within twenty-four hours, the books belonging to the Library in his possession.

8. The books marked R in the catalogue may be read in the Library, but cannot be taken out on loan by Students.

9. Any person losing or injuring a book belonging to the Library must replace it by another copy of the same edition, and of equal value, or pay such a sum of money as will enable the Library Committee to replace it.

10. No Student will receive a certificate of attendance on any of the College Lectures, nor will the name of any Student be entered at the end of the Session in the College Register, until he produce a certificate from the Librarian that he has returned all the books he had borrowed from the Library.

11. Any Student desiring to borrow books from the Library during the Long Vacation, or after his Class Certificates have been signed, must deposit with the Librarian the sum of £1, at the least, or the value of the books, if such value exceed that sum.

12. Students residing at a distance of not less than ten miles from the College may, during the Long Vacation, retain the books they have borrowed for a month, instead of fourteen days, as prescribed in Rule 6.

13. No person shall write or make any mark on any part of a book belonging to the Library; nor, in making extracts, shall any one lay the paper on which he writes on the book he is using.

14. Visitors, on signing the Visitors' Book, are permitted to read in the Library, provided they shall conform to the regulations of the Council, in reference to the consultation of books by persons who are not members of the College.

It may be sufficient merely to suggest that silence is absolutely requisite in a place devoted to the prosecution of study.

The Museum

Is open to the Students, during the College Terms, from 10, A.M., till 3, P.M., on the first five days of the week, and from 10, A.M., till 12, noon, on Saturdays.

The Observatory.

Early in 1851 the Governors of the Armagh Observatory, with the sanction of Her Majesty, transferred to the College the Transit Instrument and Astronomical Clock, which were formerly in the Observatory at Kew. The latter has been recently fitted with a new Mercurial Pendulum.

Towards the end of the same year the Lords of the Admiralty, on the recommendation of the Astronomer Royal of England, acceded to an application from Professor Wilson, for transferring to the College a Mural Circle, by Jones, which had been in use at the Cape of Good Hope, and afterwards, for a short time, at the Royal Observatory at Greenwich.

For the reception of these instruments an observatory has been erected in the College grounds, the expense being defrayed by a subscription amongst the Professors of the College and the inhabitants of the town; which was kindly headed by the Lord Bishop of the diocese.

Observations with these instruments are now regularly carried on.

Non-Matriculated Students.

Persons may attend the Lectures of any of the Professors without passing the Matriculation or any other Examination. They are required to sign an engagement "to observe order and discipline in the College," to pay a fee of *Five Shillings* to the Bursar, on behalf of the College, each Session, and the fees for the classes proposed to be attended.

During the term of their attendance on College Lectures, they are admitted to read in the Library, and on payment of a deposit of £1, are permitted to take out two volumes on loan under the same regulations as the Matriculated Students.

They are not allowed to be candidates for scholarships, prizes, or honors, or to enjoy the other privileges of Matriculated Students.

Fees.

Every Student, before he can be examined for Matriculation, must have paid to the Bursar the amount of fees payable by Scholars in the course he intends to pursue, as set forth in the annexed table. If he do not pass the Matriculation Examination, this will be returned to him.

All Matriculated Students must have paid to the Bursar the amount of fees payable by Scholars in their respective courses, before they can be admitted to examination for scholarships; or if they do not intend to compete for scholarships, before their names can be entered on the class rolls: and those Students who do not obtain scholarships must pay the remainder of their fees before the end of the first term of the Session.

Every Non-Matriculated Student must pay to the Bursar one-half of his class fees before his name can be entered on the class books, and the remainder before the end of the first term of the Session.

Table of Fees to be paid by Students pursuing any of the following Courses:

	1st Year.	2nd Year.	3rd Year.	4th Year.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Candidate for A.B. and A.M.,	8 10 0	8 5 0	5 5 0	*
If a Scholar,	4 10 0	4 5 0	2 15 0	
Candidate for M.D.,			†	
If a Scholar,				
‡Candidate for Certificate of Law Professors,	4 10 0	4 5 0		
If a Scholar,	2 10 0	2 5 0		
Candidate for Diploma of Elementary Law,	4 10 0	4 5 0	2 5 0	
If a Scholar,	2 10 0	2 5 0	1 5 0	
Candidate for LL.B. and LL.D.,	12 10 0	12 5 0	7 5 0	6 5 0
If an Arts Scholar,	8 10 0	8 5 0	4 15 0	6 5 0
If a Law Scholar,	10 10 0	10 5 0	6 5 0	6 5 0
Candidate for Diploma of Civil Engineering,	8 0 0	6 5 0		
If a Scholar,	4 5 0	3 5 0		
Candidate for Diploma of Agriculture,	6 10 0	6 5 0		
If a Scholar,	3 10 0	3 5 0		

Diploma of Elementary Law,	£2 0 0
Diploma of Civil Engineering,	3 0 0
Diploma of Agriculture,	0 10 0

Matriculated Students can attend any classes in addition to those prescribed in the course they are pursuing, on payment of the fees set down in the following table:—

Table of Fees payable by NON-MATRICULATED *Students, and by Matriculated Students attending classes not prescribed in the courses they are pursuing.*

Elementary Physics,	1 10 0		

In addition to the above fees, each Non-Matriculated Student pays, each Session, five shillings to the College.

* These fees are calculated according to the classes attended.—(See next table.)

† A third year Scholar in Arts, desiring to attend both Metaphysics and Jurisprudence and Political Economy, must pay, in addition, the full fee of £1 10*s*.

‡ A *Non-Matriculated* Student, who seeks the Certificate of the Law Professors, must pay £4 5*s*. for each of the two years of the course.

§ For Laboratory pupils, see p. 33.

General Examination and Examination for Prizes, of Third and Fourth Year Students in Law, and also of Students in the Faculty of Arts, in Jurisprudence, and Political Economy, at the close of the Lectures on these subjects.

No. 8.—AN ENLARGED DIGEST OF SUBJECTS.

GREEK.—*Professor*, CHARLES MACDOUALL, A.M.

In the Greek Class, as in all those which are attended during two sessions, the business, as well as the hours assigned to the Students of the different years, is necessarily different; but it is always distributed into three simultaneous processes, viz.; public examinations, lectures more or less formal, and exercises written at home and commented on in the class.

In the first session, the complex and self-contained structure of the Greek Language is subjected to a close analysis; carried out, on the one hand, by tracing words to their crude forms, by classifying terminations, both the primary and the flexional, and by discriminating among analogically correct forms those actually used in different ages and dialects; on the other hand, by exhibiting the methods by which words are combined in simple clauses, clauses are knit in sentences, and sentences compose periods less or more complicated. Some prose work furnishes the materials for this analysis; while the Students read and translate it, or, as often, re-translate off-hand portions of it when read out in English before them by the Professor. Besides syntactical phænomena, the laws and characteristics of both epic and dramatic versification are expounded and exemplified, in commenting upon a book of the *Ilias*, and upon some tragedy.

In the second session, while consecutive portions of Herodotus, along with some Attic oration or philosophical treatise, and a book of the *Odyssey*, along with some Attic tragedy or comedy, form the basis of prelections, the previous discipline is continued and extended; the distinctions of dialect and style are more fully elucidated; the origin, growth, and fortunes of the epos, the drama, history, and other departments of literature, are more distinctly unfolded; discussions on points of mythology, geography, chronology, archæology, æsthetics, &c., are more freely introduced and more amply treated. The Students are required to turn Herodotean Greek, at sight, into Attic, altering both the forms of words and the structure of sentences; to re-translate passages into Greek prose and verse; and also to give in original essays in both forms of composition.

Considering the variety of subjects which enter simultaneously into the Collegiate Course, the Students generally appear to give a fair share of their attention to the business of the Greek Class. Several times in the week a considerable number attend extra Lectures, at which no note is taken of their presence or of their absence.

The Professor has repeated his expression of regret, that the unfurnished state of this College, in respect to plans, coins, sculptures, engravings, models, and similar subsidiaries to the study of the Classics and of Archæology, seriously impedes and discourages the efforts of both teachers and taught within its walls.

LATIN.—*Professor*, REV. CHARLES PARSONS REICHEL, B.D.

The course read in the Latin Classes, during the Sessions 1850–51, 1851–52, 1852–53, 1853–54, is as follows:—

During the Session 1850–51, during the—

First Term—Were read and explained the Third and Fourth Books of the Odes of Horace, and the Satires of Juvenal, in the Junior Class; in the Senior Class, the Second Book of the Annals of Tacitus.

Second Term—Livy, Book 4, and part of Book 5, Juvenal, and one play of Terence, in the Junior Class; and in the Senior Class, Cicero in Verrem de Praetura Urbana, and de Signis.

Third Term—Cicero, pro lege Manilia, and pro Milone, and Tactitus, Annals, Book 1, in the Junior Class; in the Senior Class, Cicero Actiones Verrinæ continued, and Juvenal.

Session 1851–52.

First Term—Horace: Odes, Books 3 and 4, and Epistolæ Ciceronis Selectæ, in the Junior Class; and in the Senior, Tacitus, Annals, Books 2 and 3.

Second Term—Tacitus: Annals, Book 1, and Terence, Andria, and Cicero pro Cluentio, in the Junior Class; in the Senior, Tacitus, Annals, continued, and Cicero in Verrem, the Divinatio, and the Accusatio, prima and secunda.

Third Term—Juvenal: Satires, 3, 8, 10, Livy, Book 1, in the Junior Class; in the Senior, Cicero in Verrem continued, and Juvenal.

Session 1852–53.

First Term—Horace: Satires, and Cicero pro Cluentio, in the Junior Class; Cicero in Verrem in the Senior.

Second Term—Tacitus: Annals, Book 1, and Terence, Adelphi, in the Junior Class; and Cicero in Verrem, and Tusculan Disputations, Book 1, in the Senior.

Third Term—Juvenal: Satires, and Persius, in the Junior Class; Cicero de Finibus, Books 1 to 3, in the Senior Class.

Session 1853–54.

First Term—The Junior Class have read Livy, Book 22; and the Senior Class, Cicero in Verrem.

Second Term—The Junior Class are reading Cicero pro Sextio, the Interrogatio in Vatinium, and Juvenal; and the Senior Class, Cicero de Finibus, Books 1–3, Tacitus' Histories, Book 1, and Lucretius, Book 1.

Third Term—Cicero: Tusculan Disputationes, Book 1, and Horace, Epistles, will be read in the Junior; and the Georgics of Virgil in the Senior Class.

The authors read during these four sessions by the Junior and Senior Classes respectively, and explained by the Professor, have been, therefore, the following:—

Cicero—Epistolæ Selectæ; Pro Cluentio; Pro Milone; Pro lege Manilia, in Verrem Divinatio, and tres libri Accusationum; Pro Sextio; De Finibus, Books 1 to 3; Tusculan Questions, Book 1, in Vatinium.
Virgil—Georgics.
Horace—Odes, Books 1 and 3; Satires; Epistles.
Terence—Andria and Adelphi.
Tacitus—Annals, Books 1 to 3.
Livy—Books 1, 4, 5, 22.
Juvenal—except Satires 2, 6, 9.
Persius—except Satire 4.
Lucretius—Book 1.

The Junior Class is that composed of Students of the *First Year;* the Senior that composed of Students of the *Second* Year.

The Professor, therefore, has each set of Students only two years, at most, under his care; no attendance on Lectures in Latin or Greek being required of Students in their Third Year.

The Professor requires the Class to prepare for each Lecture a certain portion of the authors in course of being read. If any Student is found to have neglected doing this, without his being able to assign a satisfactory reason for doing so, his name is struck off the roll of attendance for that day. The Professor himself sometimes translates to the Class, sometimes requires them to translate aloud, making such corrections and observations as may be necessary fully to explain the passage, and to throw light on the idiom of the author, and the structure and analogy of the language.

Besides this, full statements of the historical and legal points involved in the authors read, are furnished by him.

Exercises in Latin Prose Composition are also given by him, from time to time.

The Professor has before expressed his deep regret that this College possesses none of those subsidiaries which are almost essential to the study of Classic Literature; there being not a single map, plan, coin, or cast of coin, &c., to which he might refer in elucidation of the subject; and that the classical part of the Library is most inadequately supplied. These defects are now, however, in course of being remedied.

History and English Literature.—*Professor*, George Lillie Craik, A.M.

Professorship of History and English Literature, 1853–54.

The Professor of History and English Literature has two Classes: one entitled the Class of the English Language, which is taught for one term, and is attended, according to the Curriculum for Degrees in Arts, by Students of the First Year; the other entitled the Class of History and of English Literature, which is taught for two terms, and is attended by Students of the Third Year.

It is important to observe, that by this arrangement there is added to the two distinct subjects, which are combined in the designation of the chair, a third subject perfectly distinct from either; each of the three, at the same time, like every other great department of human knowledge and speculation, having several subdivisions.

I. The Class of the English Language is taught by means of—

1. A Course of Lectures on the origin, history, and constitution of the language, and on the principles of Universal Grammar.
2. Examinations on a printed text-book, prepared by the Professor, entitled, "Outlines of the History of the English Language."
3. Exercises in Composition, both in prose and verse; and
4. A Course of Critical Readings, directed more especially to the philology of the language, both in its principles and in its details. For this last branch it has been found necessary to have a number of voluntary meetings during the Second Term, which, however, have been attended, hitherto, with scarcely an exception, by every member of the Class. And now, the portion of the prelections which accompanied the Critical Readings being about to be published, that part of the Course will for the future be omitted, and the time which it occupied otherwise employed.

The business of the Class, thus conducted, may be stated to comprehend the subjects of Universal Grammar, or the Philosophy of Language generally, with the Elements of Comparative Grammar and of Linguistic Ethnology, the Philology of the English Language, and the Practice of English Composition.

The principal works recommended to the attention of the Students are, the "Proceedings of the Philological Society;" Gust's "History of English Rhythms;" Taylor's Edition of Horne Tooke's "Diversions of Purley;" Professor Key's "Alphabet;" Thomson's "German-English Analogies;" Dr. Latham's "English Language;" Trench's "Study of Words;" and the "English Synonymes," edited by Archbishop Whately, together with the leading Dictionaries and Grammars.

II. In the Class of History and of English Literature, the teaching of History has hitherto embraced the Outlines of Historical Geography; the Elements of Chronology; a sketch of the General History of the World; a Course of Lectures on the Science of Historical Investigation; and a minute survey, by way of illustration, of various portions of the History of England, including the progress of the constitution and of society, as well as the course of public events and transactions, and with special reference to the original authorities (in so far as was practicable in our lamentable destitution here of books of all kinds), and to the bibliography of the subject. No text-book has been used, but examinations are regularly held, the Students being left to collect the facts necessary to be remembered from the Lectures, and from any of the common histories. The books recommended and referred to are far too numerous to be mentioned here.

The subject of English Literature is treated both historically, and in reference to the principles of æsthetic and critical science. For the history of our literature, a work of the Professor's, entitled "Sketches of the History of Literature and Learning in England," is employed as a text-book. On the subject of Literature, as one of the forms of the Artistic, a Course of Lectures is delivered. There are regular examinations both on the text-book and on the Lectures; and weekly essays, or other exercises in writing, are exacted throughout this part of the Course.

Last Session, in addition to his two Classes of the English Language and of History and English Literature, the Professor opened another Class, which met on one day in the week throughout the First and Second Terms, for Students preparing for the Woolwich and Civil Service Examinations.

MODERN LANGUAGES.—*Professor*, MATHIAS JOSEPH FRINGS, Ph.D.

The foreign Modern Languages taught up to the present day are French and German. The Students generally select the former for their College Course; one-fourth of the Class, on an average, however, take up both languages; very few take German alone.

The mechanism and peculiarities of the respective languages are carefully illustrated by the Professor, who is unremittingly endeavouring to enable the Students to think in that language which they are pursuing. To effect this, the Students are made to translate more frequently from their mother tongue into the one to be acquired, than *vice versa*, and orally return, without delay, in French or German, any sentence that may be proposed in English.

The Professor also occasionally delivers a Lecture on the History of French or German Literature, or Language. On all these topics the Students are frequently examined.

The books recommended are, plays from Göthe and Schiller; from Corneille, Racine, and Molière; also historical writings in both languages. Some one of these books is critically read aloud, once a week, by the Students, and turned by them into English.

The result of these proceedings, considering the very short time allowed, has generally proved satisfactory. At the end of the Session the Students who, almost all, began, as it were, with A, B, C, were able to translate tolerably well an easy French or German author, and also generally made a good attempt at turning the English into the Modern Language. They were also pretty well acquainted with the leading features of the history of that language which they have been pursuing, and satisfactorily answered the principal questions of its grammar.

The Students attending to the Modern Languages during one Session only, and beginning, so to say, at the very foot of the hill, have, unfortunately, no time left to enter the field for Comparative Grammar.

Also, two Courses for Senior Students who are required to attend a more extended Course for the Degree of A.M., are delivered in German and French.

There is an Evening Course for Medical Students who are not able to attend the Course for the Students of Arts.

CELTIC LANGUAGES.—*Professor*, JOHN O'DONOVAN, M.R.I.A.

There has been no Class formed in this department.

MATHEMATICS.—*Professor*, PETER GUTHRIE TAIT, M.A., F.C.P.S.

Attendance on this Class is prescribed to all Students in the Faculty of Arts during the first year of their Course; during the second year they are required to attend either a higher Course of Mathematics, or of Latin and Greek.

All Students in the Department of Engineering are required to attend the Mathematical Classes during two years.

Before entering, Students are required to pass an examination in the First and Second Books of Euclid, and in a small portion of Algebra. Practically they are generally well prepared in the prescribed portions of Euclid, while, on the contrary, it has been necessary, with a large portion of the Class, to commence the instruction in Algebra from the very beginning. A considerable number of the Students are Candidates for Mathematical Scholarships at entrance, and these are generally well prepared in the first six books of Euclid,and a considerable portion of Algebra and Plane Trigonometry.

On this account the instruction of the First Year in Mathematics has been given in two Divisions. The Lower Division has been carefully taken through such portions of the first six books of Euclid as they had not previously prepared, and have received instruction in Algebra as far as the progressions, and in Plane Trigonometry as far as the solution of triangles, with the use of logarithms and trigonometrical tables. The instruction of the Upper Division comprises a complete Course of Algebra and Trigonometry, with the principal historical properties of the Conic Sections, treated geometrically.

The Council has sanctioned the employment of the Senior Mathematical Scholar in giving a portion of the instruction of the Lower Division. This arrangement, while it affords a greater number of hours to the Lower Division, enables the Professor of Mathematics to give more attention to the Upper Division, and has been found to work very satisfactorily.

In the Second Year the subjects of Lecture are, Analytical Geometry, the Differential and Integral Calculus, and the first three Sections of the Principia of Newton; and, in addition to this, when the progress of the Students has been sufficiently rapid during the early part of the Session, the solution of the simpler kinds of Differential Equations, and the Principles of Analytical Solid Geometry. Spherical Trigonometry and the Theory of Equations are not included in the subjects of Lecture, but are required from the Candidates for Science Scholarships of the Third Year.

The instruction is carried on in great part by questions, which the Students are required to work out at the time, under the eye of the Professor, the questions having reference to those portions of the subject which have just been treated in the Lectures. The Professor then corrects their work, and gives such hints and explanations as are requisite.

THE PHYSICAL CLASSES.—*Professor*, JOHN STEVELLY, LL.D.

The subjects taught in the Physical Classes are distributed under three subdivisions—Natural Philosophy, Experimental Physics, and Practical Mechanics.

The subjects comprised in the Course of Natural Philosophy are Mechanics (under its several statical and dynamical subdivisions), Hydrostatics, Hydraulics, Pneumatics, Acoustics, Optics, and Astronomy. The Students who attend this Class are the Matriculated Students who are seeking a Degree in Arts, the Engineering Students of the Second Year, and Non-Matriculated Students, some of whom are Candidates for the ministry in the Presbyterian Churches. Attendance at the Lectures three days in each week, during the three Terms, is imperative on all those Students; two days in the week their attendance is optional. In the Lectures, attendance on which is imperative, such mathematical proofs and illustrations only are introduced as a person reasonably prepared in the six first books of Euclid and Elementary Algebra might easily comprehend. The teaching is by prælection; and although no text-books are prescribed, the ordinary elementary works on the several subjects are pointed out and referred to. At the Lectures, attendance on which is voluntary, the demonstrations and investigations are pursued in a more systematic and mathematical method, so as to require a knowledge of Analytic Geometry, Conic Sections, and the Differential and Integral Calculus. Text-books are used for the guidance of the Students attending these Lectures, who are chiefly those who are intending to compete for Honors. These text-books are Earnshaw's and Todhunter's Statics, Wilson's Dynamics, Tait's Dynamics of a Particle, Miller's Hydrostatics, Lloyd's Optics, Herschel's Astronomy, and two of Airy's Tracts, with occasional reference to Du Hamel's Cours de Mecanique and to Poisson's Works.

The Class of Experimental Physics is attended by the same Students, and also by Agricultural Students of the First Year, and by Medical Students of the Third Year. The subjects of these Lectures are taught entirely without mathematical demonstration, by the aid of experiments, illustrations, drawings, and models, and such works as Lardner's Handbook, Golding Bird's Physics, Webster's Physics, Arnott's Elements. Pouillet, Peschel, and such like standard works are referred to, and recommended to the attention of the Students. The subjects of Heat, Electricity, and Electro-Magnetism are at present chiefly taught in the Chemical Class.

The Practical Mechanical Class is attended by Students in Engineering of the Second Year. The Lectures and instructions are given twice in the week. The subjects embraced are the nature and estimate of work done; the kinds of work required to be done; the nature and laws of friction, and other useless resistances; the moving powers at our command, their respective nature and the laws which govern their action; the manner in which they are, by machinery, connected with and opposed to the resistances; the construction of machines; the principles of strength of materials as opposed to strains; the equilibrium of structures, frames, roofs, arches, domes; the general principles of mechanism; general maxims in the structure and working of machines; maximum effects of machines; hydraulic engines; the steam engine. The works used as guides to the studies of the Students in this Class are selections from Lloyd's and Robinson's Mechanics, Willis's Principles of Mechanism, Barlow on Materials and Construction, Hodgkinson's Experimental Researches, Tredgold, Tate's Elementary Treatises and Exercises, and selected numbers of Weale's Rudimentary Series.

CHEMISTRY.—*Professor*, THOMAS ANDREWS, M.D., F.R.S., M.R.I.A.

In the Class of Chemistry the greater part of the Course is devoted to pure Chemistry; but the Elements of the Sciences of Heat and Electricity, particularly in their relations with Chemistry Proper, are also taught. The application of these sciences to the arts are particularly referred to; and it has been the constant endeavour of the Professor to communicate to the Students as precise and accurate information as possible on the subjects treated in his Lectures, and to train them to habits of careful observation and accurate thinking. With this view a weekly examination of the whole Class is held, at which the Students are subjected to a searching examination on the business of the preceding week; and further to encourage a taste for scientific inquiry, and also to train a certain number of practical chemists, a limited number of the best Students are admitted, by examination, as working pupils into the chemical laboratory, where they have an opportunity of acquiring a knowledge of chemical analysis. This latter arrangement has now been in practice for three years, and has already been attended with the best results.

NATURAL HISTORY.—*Professor*, GEORGE DICKIE, M.D.

The Zoological Department of the Course occupies the First Term and greater part of the Second, and comprehends the outlines of Anatomy and Physiology of animals, followed by Systematic Zoology, and remarks on the distribution of animals.

The Botanical part comprehends Vegetable Anatomy and Physiology, Systematic Botany, and distribution of vegetable forms. In addition to the Class Lectures (four days for Arts and five for Medical Students), meetings are held in the Botanic Garden, and practical excursions made into the neighbouring country.

The subject of Physical Geography is supplemental to the above Courses, and is delivered to Arts Students of the Third Year, during the First Term of the Session.

This Course comprehends chiefly Lectures on the structure and form of continents and islands; the distribution of mountain systems, rivers, and lakes; the ocean, its currents, temperature, &c.; the atmosphere, its currents, &c.; rain, snow, &c. The preceding subjects are considered in relation to the geographical distribution of animals and plants.

These different branches are illustrated by specimens, or drawings, or both, as the case may be.

It is to be regretted, however, that at present there is a deficiency of both the means of illustration alluded to.

LOGIC AND METAPHYSICS.—*Professor*, REV. JAMES M'COSH, LL.D.

Students attend this Class four days each week during twelve weeks of the Second Session. On two of these days there are examinations on a text-book of Formal Logic, with short prelections on the said text-book, and also the oral explanation of philosophic terms, the reading of Essays by the Students, and the criticism of them by the Professor. On the other two days the Professor delivers written Lectures. This Course of Lectures is divided into two parts: FIRST, GENERAL LOGIC, or an Exposition of the Laws of Thought in general, that is, whatever be the object of thought, embracing Notions, Judgment, and Reasoning: SECONDLY, PARTICULAR LOGIC, or the Development of the Laws of Thought, as directed to particular classes of objects, comprising Demonstrative Evidence, Probable Evidence, Induction, Analogy, Teleology, and the Relation of the Oraganon of Bacon to that of Aristotle. The prominent topic in the second part is the Method of Induction, which is treated under the heads:—I. The Means, being generally Systematic Observation, and more particularly Analysis, Observation Proper, Experiment, Hypothesis, Explication of the Conception. II. The End, being the Discovery of Classes (as in Natural History, &c.), or Causes (as in Natural Philosophy, &c.). III. The Canons of Classes and Causes by which we may reach the End by the Means. The Students are required to give in a short written essay every ten days. At the Pass Examination, at the close, about one-half of the questions bear upon subjects discussed in the text-book, and the other half upon topics explained in the lectures.

METAPHYSICS.

This Class meets four days each week, and an hour each day, during the first two terms of the session, and is attended by Students of the third year. On one of these days there is a rigid examination, with interspersed remarks by the Professor, on the second half of the Epitome of the History of Philosophy, sanctioned by the University of France (translated by Henry). In this part of the text-book there is an abstract of the doctrines of the more eminent philosophers who have flourished in this country, and on the Continent of Europe, from the time of Bacon to the present day. On another of these days there is an examination on the written lectures, together with the reading and criticism of essays; the Students being required to give in a carefully written essay every fortnight to the Professor, who reads it at home, and selects certain portions of it to be read in the class, where he criticises it. These essays are on the leading subjects discussed in the written lectures. On the other two days the Professor delivers carefully prepared written lectures. He begins the course with a few lectures on the Method of Investigation, which is that of Induction, and on Mind and Body, and then proceeds to divide his course into two parts, PSYCHOLOGY and METAPHYSICS PROPER.

Under PSYCHOLOGY he treats (1) of the Powers or Faculties of the Mind, and (2) of the Laws of the Succession of Thought. He classifies the faculties as follows:—I. The Simple Cognitive Faculties: (*a*) Perception; (*b*) Consciousness. II. The Reproductive Faculties: (*a*) Memory; (*b*) Imagination; (*c*) Symbolic Power. III. The Faculties which Discover Relations: (*a*) of Identity and Difference; (*b*) of Whole and Parts (to which we owe abstractions); (*c*) of Resemblance in respect of such qualities as (1) of space, (2) of Time, (3) of Quantity, (4) Active Property (to these we owe the Discovery of Classes), and (*d*) of Cause and Effect. IV. The Conscience. V. The Emotions; and VI. The Will. In this course of lectures, which occupies two-thirds of the session, the method of operation, and peculiarities of these mental attributes, are carefully pointed out.

Under METAPHYSICS PROPER the Professor treats of the Native or Constitutional Principles which are in the Mind prior to Experience. He points out their true Psychological Nature, and shows that they are the fundamental laws or rules of the Faculties. He also specifies the tests, such as Necessity and Universality, by which they may be distinguished. He proves that they are in the constitution of the mind, and that they operate spontaneously, but that we can make a reflective or philosophic use of them only after we have detected their nature by a careful induction. He classifies them as the True, the Lovely, and the Morally Good. Under the first he treats (1) of Primitive Cognitions and Beliefs, such as Body, Spirit, Substance, Space, Time, Dynamic Power, the Infinite; and (2) Primitive Judgment, such as Substance and Quality, Mathematical Axioms, Cause and Effect. Under the Lovely, he treats of that which calls forth emotion, and discusses very briefly the nature of Beauty. Under the Good, without entering into the subject of Ethics, he shows that there is a fundamental distinction between Moral Good and Evil. He closes this course by showing how all these principles should conduct us to the belief in a Being who is at one and the same time the True, the Lovely, and the Good.

Higher Class of Logic and Metaphysics.

This Class is a small one, consisting only of about eight young men, who have been under the Professor the two previous sessions, most of whom have taken the Degree of B.A., and some of whom are preparing for Competitive Examinations. It meets two hours each week, during the first and second terms of the session. A considerably large course of reading is prescribed to the Student, on which he is examined by the Professor, who intersperses prelections of his own. Last session the Students went over, in Logic, Thomson's Outlines of the Laws of Thought, and portions of Whewell's Philosophy of the Inductive Sciences, and of Mill's Logic; and in Metaphysics, an Epitome of the Ancient Greek Philosophy, Kant's Critick of Pure Reason, and portions of Hamilton's Notes and Discussions. For several years the Professor delivered a Course of Lectures on the Correspondence between the Order of External Nature and the Laws of the Mind—this has since been published. This year he is lecturing on the Laws of Thought, and the Nature and Necessary Principles of the Mind inductively investigated.

GEOLOGY AND MINERALOGY.—*Professor*, WYVILLE THOMSON, LL.D.

The Courses consist of lectures, demonstrations, and examinations. The Geological Course embraces the general principles of the science, and a detailed investigation of the palæontological, lithological, and economic characters of all the formations. The Students are exercised in the practical use of the necessary instruments, and in the construction of geological maps and working sections. The characteristic fossils of the different formations are rendered familiar by the exhibition of such specimens as the funds allow of, and an excellent series of drawings. Drawings are also used for the illustration of the underground workings of mines of copper, coal, &c.

In the Mineralogical Course the Students are instructed in the most modern crystallography by models, and exercised with the reflecting goniometer. The electro-chemical classification of minerals is then explained, and an extensive suite of minerals in the museum is arranged on that system, for the instruction of the Students. The Professor is now adding the crystallographic and chemical formulæ to every species in the cases, so as to increase the educational value of the collection to the utmost.

Once a week examinations are held, and additional explanations given of the subjects of the preceding Lectures.

CIVIL ENGINEERING.—*Professor*, JOHN GODWIN, C.E.

The Course of instruction imparted to Students in this Class includes the principles and practice of surveying and practical geodesy, together with the principles and practice of levelling and making sections, mapping, and drawing. This Course is confined to Students of the First year. Those of the Second year are instructed in the general branches of Civil Engineering, including engineering and general architecture, the formation of railways, roads, bridges; the strength and properties of material, and every other branch of general construction; hydraulic engineering, including water-power, and all works connected with hydraulics; the principles of construction of the steam-engine, with the nature and properties of steam as a moving power; practical mechanics, and engineering finance.

AGRICULTURE.—*Professor*, JOHN FREDERICK HODGES, M.D., F.C.S.

Theory of Agriculture.

The objects of this Course are to teach the principles of Agricultural Science. It includes an account of the origin and composition of soils, the structure and food of plants, and the composition and preparation of manures.

Practice of Agriculture.

The objects of this Course are to teach the young agriculturist how practice may be conducted in accordance with the principles of science, and the results of experience, and to describe the methods by which the largest amount of food may be profitably obtained from the soils of this country. It includes an account of the processes employed in the preparation of the soil for crops, draining, irrigation, &c., the history of the plants of the farm, and the economy of farm produce.

History and Diseases of Farm Animals.

In this Course the history, structure, and treatment of the animals of the farm, in health and disease, are described, and the relative value and economical preparation of the various substances used in feeding explained.

All the Lectures in these Courses require an extensive series of illustrations, and efforts have been made to obtain suitable collections of apparatus, models, &c.; a most valuable collection of drawings has been provided for the demonstration of the structure and forms of animals, and numerous specimens of seeds, &c., have been presented to the College. As the history of the treatment and technical management of the flax plant, which affords the raw material of the staple manufacture of Ireland, is regarded as an important department of the duties of an Agricultural Professor in Ulster, the chief seat of the flax industry, a complete series of flax implements and specimens has been placed in the museum.

The Students are examined frequently during the Session, and required to write abstracts of the lectures. By these means their attention is secured, and their progress ascertained. Excursions are also made to implement and manure manufactories, and they attend the monthly meetings of the Chemico-Agricultural Society of Ulster, which are held in Belfast.

The influence which the young men thus trained must, in future years, exercise on the agriculture of Ireland, may be expected to produce the most beneficial results.

ANATOMY AND PHYSIOLOGY.—*Professor*, HUGH CARLILE, A.M., M.D., M.R.I.A.

The Department of Anatomy and Physiology comprises the Lectures on Anatomy and Physiology, and Practical Anatomy. The Lectures on Anatomy and Physiology consist in the exhibition of carefully dissected portions of the recent human body and of the bodies of other animals, and of anatomical preparations of the more delicate structures, preserved in spirits of wine, and by various other means, and in the description of the forms, relations, and intimate structure of all the organs of the body, and the explanation of the functions of every part. Comparative anatomy is largely used for the purpose of illustrating analogous structures and functions in man, and morbid preparations are employed in order to exhibit the changes of organization induced by disease. Enlarged copies of microscopic drawings are also much employed in these Lectures, as affording the best means of conveying to a large number of individuals, at the same time, a correct knowledge of minute anatomical structure. These Lectures are given on the first five days of the week, and examinations of the Lecture Class are frequently held, and the answering recorded.

Practical Anatomy is understood to comprehend dissection of the dead body, and anatomical demonstrations. The dissections are carried on, under the superintendence of the Professor of Anatomy and Physiology and the Demonstrator of Anatomy, during the whole week, at all convenient hours not occupied by Lectures or Demonstrations. Each Student is required to dissect, during the Session, at least one-half of a subject, so that every portion of the body, the right and left sides being, upon the whole, symmetrical, shall come under his observation. The bodies are so prepared, by a preserving process, that decomposition is arrested for a time sufficient to admit of the complete dissection of the several parts; and, since the opening of this College, no serious case has occurred of any of those diseases which the dissection of unpreserved subjects so frequently produces.

The anatomical demonstrations form a course of instruction of a more elementary nature than the Lectures on Anatomy and Physiology. They deal more with the forms and positions of parts, in reference to their anatomical and surgical relations, than with their intimate structure, functions, or homologies; and they are confined more strictly to the human subject in its healthy or normal condition, Comparative Anatomy and Pathology not forming any considerable part of the Course. They are given on the first five days of the week, and are interspersed with frequent examinations.

The Lectures on Anatomy and Physiology are given at Queen's College, in the vicinity of the museum containing the preparations required for their illustration; while, from the absence at the College of any apartments whatever for the purposes of dissection and anatomical demonstration, these are carried on in a building hired for the purpose, at the distance of a mile from the College. This building is in a damp and unwholesome situation, confined in space, and otherwise very unsuitable for the purposes to which it is applied. Its distance from the College involves much loss of time to Students, in going to and fro, during the intervals of Lectures, and seriously curtails those portions which they would otherwise most profitably employ in acquiring, by dissection, sound and practical anatomical knowledge. Frequent and urgent applications have been made to the various governments which have been in power since the opening of the College in 1849, for means to provide suitable anatomical apartments within the precincts of the College grounds, but hitherto without any satisfactory result.

PRACTICE OF MEDICINE.—*Professor*, JOHN CREERY FERGUSON, A.M., M.B., F. K. and Q. C. P.

The Class meets four times each week, from the first week of November to the last of the following April. An examination is held usually once a fortnight. The Course embraces the principles of Inflammation, Fevers, the diseases, organic and functional, of the viscera of the three great cavities of the human body. In treating of individual diseases, their pathology, semeiology, ætiology, and treatment, are the subjects chiefly dwelt on. Wherever it is possible, pathology is illustrated by the preparations afforded

by our museum, by drawings and plates, or by recent specimens. It may be added, that the Professor's present connexion with the Belfast General Hospital adds greatly to the means of making his Course more useful and interesting to Students.

THEORY AND PRACTICE OF SURGERY.—*Professor*, ALEXANDER GORDON, M.D.

Four Lectures are delivered weekly during the Medical Session. An examination is held each day on the subject of the preceding day's Lecture. Each Course comprises the following subjects:—

Inflammation,
Suppuration,
Mortification,
Erysipelas,
Burns,
Ulcers,
Wounds,
Hæmorrhage,
Diseases of the Arteries,
„ Veins,
Fractures of Trunk and Extremities,
„ Cranium, Injuries of the Brain and Scalp,
Dislocations,
Diseases of the Joints,
Diseases of the Bursæ,
„ Bone, benign and malignant,
„ the Jaws and Mouth,
„ the Fingers and Toes,
„ Female Breast,
„ Anus and Rectum,
„ Testis,
„ Hernia,
„ Prostate,
„ Bladder,
„ Eyes,
„ Larynx,
Syphilis,
Gonorrhœa,
Stricture.

All the capital and minor operations are performed on the dead subject by the Students, under the superintendence of the Professor.

MATERIA MEDICA.—*Professor*, HORATIO A. STEWART, M.D.

This Course includes—

1st. Dietics—a review of the different kinds of food used in health and in disease.

2nd. General Pharmacology, or the modes in which medicines act upon the living organism in a state of health.

3rd. Therapeutics, or the modes in which medicines act as curative agents.

4th. Pharmacy.

5th. Special Pharmacology, or the history, composition, uses, and modes of administering medicinal agents for the cure of disease.

The Class meets four times each week. An examination is held once every three weeks.

MIDWIFERY.—*Professor*, WILLIAM BURDEN, M.D.

Lectures four times a week, during the six winter months, consist of following subjects:—

Anatomy of the pelvis, so much as is required for midwifery. Its measurement and pelvimeters.

Contents of the pelvis. The functions of the uterus in its virgin state.

Conception—length of gestation—changes of the uterus and its appendages during gestation.

Growth of child from its earliest seen form until its full parasitic size.

Graafian vesicle and corpus luteum. Fœtus, its circulation, signs of maturity, weight, and length.

Plural births.

Proportion of births and deaths of males to females.

Superfœtation.

Signs of pregnancy.

Signs of approaching labour.

Natural labour, its progress, also the positions and progress of child till its separation from its mother.

Management of natural labour, including the arrangement of the bed and bed-room, and the proper dress and posture of the patient.

Tedious labour, its causes and treatment.

Labour requiring the use of instruments; their application taught on models in the class.

Cæsarean section and Sequltean operation—how to prevent the fœtus from getting large in uterus.

Premature labour—how to bring it on, and when it is necessary to do so.

Cross-births and their treatment.

Abortion—how to prevent it.

Extra uterine fœtations—how they occur, and their treatment.

Management of women after delivery, and treatment of such accidents and diseases as occur at this period.

Management of children after birth, washing, dressing, food, &c., and the choice of a wet-nurse, and treatment of such accidents as take place at this period, or soon after.

Practical midwifery taught by pupils attending patients in their own houses and in the Lying-in Hospital.

MEDICAL JURISPRUDENCE.—*Professor*, DR. HODGES.

The Lectures in this Course are delivered twice weekly during six months. They include an account of the history and chemical investigation of poisons, and of the various subjects respecting which the evidence and assistance of Medical Practitioners may be required in Courts of Law. Experimental illustrations of the methods to be pursued in medico-legal inquiries are given, and frequent examinations held to test the progress of Students. No salary has been allocated to the Teacher of this department; and the duties, at the request of the Council, have, since the opening of the College, been performed by Dr. Hodges.

ENGLISH LAW.—*Professor*, ECHLIN MOLYNEUX, Q.C.

The Professor of English Law, in conducting his department, has constantly kept in view the object of the Select Committee of the House of Commons in recommending the foundation of Chairs in Law in connexion with the Queen's Colleges, which as they stated in their Report on Legal Education, was not so much to prepare Candidates for the Bar, as to raise the standard of legal attainments amongst local practitioners, and especially to provide opportunities of legal education to qualify persons intended to fill administrative situations not strictly legal—a policy which has been since followed up by the Legislature conferring privileges, by way of inducement, on Candidates for the profession of attorney and solicitor, who shall avail themselves of these Schools of Law.

The Course of the *First* year, in this department, comprehends the elements of real and personal property, with the principles of conveyancing; that of the *Second* consists of an introduction to the principles and practice of Courts of Equity and the law of bankruptcy; the *Third* course includes the common law as incident to contracts, the nature and form of remedies by civil action, and an outline of criminal law, theoretical and administrative, which last completes the Curriculum of instruction required for the attainment of the Diploma of Elementary Law in the Queen's University. The studies prescribed for Students of the *Fourth* year to qualify them for the Degree of LL.B., embrace a more extended and detailed course of the subjects already enumerated, including the law of wills, powers, evidence, and procedure.

The Lectures are made auxiliary to the cotemporaneous studies directed, and are accompanied by interrogation, independent of the General Examination and that for Honors. Such books, cases, and decisions, and portions of treatises are pointed out for reading as are considered by the Professor most useful in elucidating a branch of learning which is scarcely furnished with books exclusively intended for instruction; and no efforts have been spared to point out the peculiarities of the law in Ireland, whether proceeding from statutes or inherent diversity of practice, or to direct attention to the recent changes which have been introduced into the course of procedure.

From the first opening of the College to the present time, the successive classes have spontaneously applied themselves with assiduity and perseverance to the various subjects of legal instruction, and several Non-Matriculated Students have, from time to time, availed themselves of the privilege afforded by the College Ordinances, of attending detached Courses of the Lectures on selected subjects; while the only disappointment manifested is at the meagre supply of law books to be found in the Library, a want which embarrasses both Professor and Student.

Under these circumstances, the Professor is gratified at being able to give the assurance that the Faculty of Law has fully realized the object of its founders, and that a further extension of its public benefits would ensue upon the adoption, by Government, of the suggestion made by the same Committee of the House of Commons, that a preference should be given to candidates for situations in the civil service, not of a purely legal nature, who could produce testimonials of legal attainments from those institutions—a rule which would fully accord with the principle laid down in a recent report of another Committee in relation to the civil service.

JURISPRUDENCE AND POLITICAL ECONOMY.—*Professor*, T. E. CLIFFE LESLIE, LL.B.

For Law Students of the First Year.—The Lectures on Jurisprudence take place on Mondays, Wednesdays, and Fridays, at 7½, P.M. Twenty-four Lectures in each Session.

For Law Students of the Second Year.—The Lectures on Civil Law take place on Mondays, Wednesdays, and Fridays. Twenty-four Lectures in each Session.

For Students in the Arts Classes of the Third Year.—The Lectures on Political Economy take place at 10, A.M., and the Lectures on Jurisprudence take place at 7½, P.M., on Mondays, Wednesdays, and Fridays. There are for this Class forty-eight Lectures: twenty-four in Political Economy, and twenty-four in Jurisprudence.

For Law Students of the Fourth Year.—The Lectures on Constitutional, Colonial, and International Law take place on Mondays, Wednesdays, and Fridays. Twenty-four Lectures in each Session.

For Arts Students of the Fourth Year, advanced course of Lectures on Jurisprudence and Political Economy, on Tuesdays, Thursdays, and Saturdays. Twenty-four Lectures.

All the Lectures of Professor Leslie are given in the months of December, February, and March.

Subjects of Lectures :—

Political Economy.—Elements and Applications of the Science. Taxation. Currency.

Jurisprudence.—Elements of the Science. Leading Changes in English Law, from the Conquest to present time. Law Reform.

Civil Law.—History of the Civil Law, from the time of Justinian. Comparative Jurisprudence.

Colonial Law.—Government of Dependencies.

International Law.—Public and Private International Jurisprudence.

Elementary Text-Books used by the Students :—*

Political Economy.—Popular Fallacies on General Interests (*Translated by G. R. Porter, from Bastiat*). Senior's Treatise on Political Economy. Adam Smith's Wealth of Nations. Professor Hussey Walsh on Metallic Currency.

Jurisprudence.—Elements of Jurisprudence. (*Dublin*, 1852.) Reddie's Inquiries in the Science of Law. Lord Bacon's Tract on Universal Justice. Adam Smith's Wealth of Nations, Book III.

Civil Law.—Gibbon's Survey of the Roman Law. Institutes of Justinian, translated by Lyon. Bowyer's Commentaries on the Civil Law.

Constitutional, Colonial, and International Law.—Stephen's Commentaries on the Laws of England. Hallam's Middle Ages, Chap. VIII., and Constitutional History. Lewis on the Government of Dependencies. Reddie's Inquiries in International Law. Story's Conflict of Laws.

* Other books will be referred to and recommended during the Session.

THE REPORT

OF

THE PRESIDENT OF QUEEN'S COLLEGE, CORK,

FOR

THE ACADEMIC YEAR, 1855-56.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

In compliance with the Statute of this College, which imposes upon the President the duty of preparing and forwarding the Report of the College required to be laid before Parliament in each year, I beg leave to submit for your Majesty's gracious consideration the following Report of the Proceedings of the Queen's College, Cork, during the academic year last passed, and of the present condition of the several departments of the College.

In submitting this Report, I shall beg leave to refer also to the progress and condition of the College during the two preceding years (1853–54 and 1854–55), as no official report was made by me for either of those years, for the following reason :—In March, 1853, I was made aware that a very serious legal question had been raised as to my power to make such Report as President of the College, and the existence of that doubt was formally, although very irregularly, brought under the notice of your Majesty's Government. I, therefore, considered it my duty to await official instructions as to the course I should adopt, particularly, as I had good reason to believe that if I made any report, after my power to do so had been denied, I should be accused of claiming, for my office of President, powers which had not been attached thereto by the Statutes of the College. No instructions in the matter, however, reached me until November last, when the Report of Queen's College, Cork, for the Session 1855–56, was called for, by direction of his Excellency the Lord Lieutenant; and in obedience to his Excellency's commands, I have now the honour to submit my official Report as follows :—

NUMBER OF STUDENTS.

The Entrance Examinations for the last and the preceding Sessions were held at the times appointed by the College Council, as detailed in the official programme, of which a copy is annexed (Appendix A). The results of those examinations afforded remarkable evidence of the progress which the system of education pursued in the Queen's Colleges has made in public estimation, sixty-nine students having entered in last year to commence the first year's course, whilst of the Matriculated Students of preceding years eighty continued to prosecute their studies, and qualify for University Diplomas and Degrees.

There also entered as non-Matriculated Students, to attend the Lectures of special Professors, thirteen Students, chiefly of the Medical and Engineering Departments.

These numbers will be best exhibited and understood, in connexion with the numbers of Students who had entered and continued their Courses in the pre-

ceding three years, viz.—1852–53, for which the Report last submitted was made; and in 1853–54 and 1854–55, the interval during which no Report was made.

The numbers are—

	Years			
	1852–53.	1853–54.	1854–55.	1855–56.
Number of Matriculated Students—First Year's Course, .	46	52	45	69
„ „ Second Year's Course, .	33	28	34	34
„ „ Third Year's Course, .	22	25	25	24
„ „ Fourth Year's Course, .	10	10	18	22
Total Number of Matriculated Students, . . .	111	115	122	149
Non-Matriculated Students, ...	21	25	22	13
Total Number of Students on the Roll, . .	132	140	144	162

The number of Students entering the College, and also the total number of Students is thus shown by the above table to have increased very considerably since the last official Report was made; and if these numbers be contrasted with those of the Students who attended the College when it first opened, as given in the official Report for 1849–50, the amount of success obtained will be still more strikingly shown. Thus the numbers were—

	In 1850.	In 1856.
Matriculated Students, . .	70	149
Non-Matriculated Students, .	43	13
Total Number, . .	113	162

There will be observed in the numbers above given a circumstance on which I feel it my duty to observe—it is, that whilst the number of Matriculated Students, who are the true Students entering the College for, and receiving the benefits of, the systematic Course of University Education, has rapidly increased from 70 in 1850 to 149 in 1856, the Class of non-Matriculated Students, who are persons that enter for the Lectures of one or more particular Professors, but are not otherwise connected with the College, or with the system of Education, has progressively diminished, having fallen from 45, which was the number in 1849–50, to 13, which was the number in 1855–56. The cause of this diminution is to be found principally in the fact, that a large proportion of that class of persons, who at first entered as non-Matriculated Students, to acquire information on one or two special subjects, finding, after the nature of the Education given in the Queen's Colleges became better known, the great advantages of the systematic course of study pursued by the Matriculated Students, have entered, more usually of late years, as Matriculated Students, and have, consequently, been gradually absorbed into the numbers of the general body of true Queen's University Students, and have contributed thereby to that augmentation of numbers, which has afforded such satisfactory evidence of progress in the College, and of approval by the public of its arrangements.

Of the 165 Students who were in attendance at the College, in the Session 1855–56, the distribution according to Faculties and Courses of Professional study, was as follows:—

	Matriculated.	Non-Matriculated.	Total.
In the Faculty of Arts, . . .	64	3	67
„ Faculty of Medicine, . .	55	8	63
„ Faculty of Law, . . .	5	–	5
„ Course of Engineering, . .	24	1	25
„ Course of Agriculture, . .	4	1	5
Total, ...	152	13	165

COLLEGE EXAMINATIONS FOR MATRICULATION AND SCHOLARSHIPS, AND FOR SESSIONAL PROMOTION OF MATRICULATED STUDENTS.

During the past years the examinations for Matriculation and Scholarships have been carried on as was described in last Report, and with equally satisfactory results; but the Council of the College being still convinced of the necessity of

maintaining a high standard of qualification for those rewards of superior merit, founded by the liberality of the State, have conferred the Scholarships only upon those candidates whose proficiency was reported by the Examining Professors to be satisfactory, and hence the total number of Scholarships, founded by the College Statutes, has not yet been filled up.

The numbers and classifications of the Scholarships awarded by the College Council, in the Session of 1855–56, were as follows:—

Of the Thirty Junior Scholarships in the Faculty of Arts, twenty-four were awarded.

Of the Seven Senior Scholarships in the Faculty of Arts, five were awarded.

Of the Six Junior Scholarships in the Faculty of Medicine, all were awarded.

Of the Two Senior Scholarships in the Faculty of Medicine, one was awarded.

Of the Three Junior, and One Senior Scholarships in the Faculty of Law, two were awarded.

Of the Two Scholarships in the Course of Engineering, there were awarded both, and of the Four Scholarships in the Course of Agriculture, there were awarded four.

The subjects of examination, Literary and Scientific, for these several Scholarships, will be found fully detailed in the Programme of the College annexed—Appendix A.

In regard to those Examinations for Entrance and Scholarships, it is expected that the College Council will be enabled, after some time, to effect a further improvement, and to enforce a still greater amount of preliminary education, the more so as from the important Inquiry which is now being conducted, under the instructions of your Majesty's Government, into the condition of Endowed Schools in Ireland, the arrangements for Secondary Education will probably be rendered much more efficient throughout the country generally, than they now are, and Students will, consequently, be found better prepared at entrance into the Queen's Colleges to avail themselves of the more advanced courses of Literary and Scientific instruction, which it is the special duty of the Professors to conduct.

At the close of the Session the Class Examinations for Honors and Promotions were, as usual, held. The results were satisfactory, and on the recommendation of the several Professors Honors were awarded to the most distinguished Students in each class. Those Honors were conferred subsequently at a Public Meeting of the College, and in Appendix B a list of same is given.

The Students of the Classes of the third and fourth years, who had completed their courses of study for University Diplomas or Degrees, were recommended in the usual form to the Senate of the Queen's University, as Candidates to be admitted to the examination for Degrees.

COURSES OF INSTRUCTION.

I beg leave to report that the several courses of instruction, in the Special departments of Science and Literature, have been carried on by the Professors in the several Faculties, with a degree of zeal, ability, and diligence, most creditable to the Professors generally, and most advantageous to the Students, and to the interests of education. I have found, on the part of the Professors generally, and of the Council of the College, the most earnest desire to maintain the system of instruction in the highest state of efficiency, in every department; and I feel confident, that by such zealous co-operation the continuous progress and permanent success of the College, and of the system of liberal and united education, will be most certainly secured.

As regards the Special Occupation of Professors with the Courses of Education for University Diplomas and Degrees, there were engaged—

In the Courses for the Degrees of Bachelor and Master of Arts, ten Professors, of whom five were occupied with Scientific, and Five with Literary Courses.

The Courses for the Degree of Doctor of Medicine have occupied nine Professors, and the Demonstrator of Anatomy.

The Courses in the Faculty of Law for the Diploma of Elementary Law and the Degrees of Bachelor and Doctor of Laws, have occupied three Professors.

In the Course for the Diploma of Civil Engineering, there are occupied five Professors.

In the Course for the Diploma of Agriculture, there are occupied six Professors.

The total number of Classes, the number of Lectures delivered weekly in each,

the total number of Lectures delivered by each Professor in the Session, and the number of Students attending each Class, will be seen from the following Table:—

Class.	Number of Lectures weekly.	Number of Lectures in the Course.	Number of Students attending.
Greek Language,	7	179	46
Latin Language,	7	221	49
English Language and Literature,	6	99	40
French Language,	8	154	51
German Language,	2	36	6
Celtic Languages,	No class formed.*		
Mathematics,	8	145	56
Natural Philosophy,	9	280	40
Chemistry,	3	70	55
Practical Chemistry,	4	47	16
Zoology and Botany,	3	87	37
Geology and Mineralogy,	3	70	15
Logic,	3	30	9
Metaphysics,	3	43	4
Civil Engineering,	6	141	25
Agriculture,	9	108	7
Anatomy and Physiology,	5	120	55
Practical Anatomy,	5	120	47
Surgery,	3	60	33
Practice of Medicine,	3	59	27
Materia Medica,	3	53	20
Medical Jurisprudence,	3	36	12
Midwifery,	3	60	15
English Law,	4	48	3
Civil Law,	Varied.	39	2
Political Economy,	4	24	6

Besides those regular Courses of Lectures, the instructions of the Professors were carried out, in most departments, by additional means of a very important character. Thus, in the Departments of Natural History and Geology, there were frequent Herborizations and Excursions, conducted by the Professors during the favourable season. In the Department of Engineering, the Drawing School was supervised by the Professor during several hours daily, and Excursions for Field Practice in Surveying and Engineering operations were conducted by the Professor, weekly, during a suitable portion of the course. In the Department of Anatomy and Physiology special courses were delivered on Regional Anatomy, and the Anatomy of the Eye and Ear; and by the Professors of the Greek and Latin Languages, and of Mathematics, Special Courses are delivered extra for Students who wish to prepare in the higher Honor Courses.

For fuller information on this portion of the subject, I annex, Appendix C, the Reports of the several Professors, furnished to me in answer to an Official Circular, of which a copy is also given. The general subjects embraced in the courses of instruction, the special methods employed, the Text Books used, and other important information, will be found detailed in those Reports.

In order to afford additional means of judging of the system of instruction as carried out in Cork College, since its foundation, I have the honour to annex Appendix D, Tables showing—

1st.—The total number of Students.

2nd.—The number of Lectures given by each Professor. And

3rd.—The number of Students attending each Class, in every year since 1849, when the College came into operation.

The attendance of the Students upon the Lectures was satisfactory, but this subject will be further referred to under the head of Conduct and Discipline. The regulations for attendance, and certificates of same, are given in Appendix I.

LIBRARIES, GENERAL AND MEDICAL MUSEUMS, AND BOTANIC GARDEN.

Since the date of last Report, the Libraries and Museums of Queen's College, Cork, have been very considerably increased, and rendered more suitable to the wants of the several departments of instruction. Full details of the nature of the additions and of the present state of the Library will be found in the Report of the

* See Professor's Report in Appendix.

Librarian, which is annexed (Appendix E); and there will be found, in the Report of the Curator of the Museum, which is also annexed (Appendix F), full information as to the recent progress and actual condition of that portion of the College. I feel it my duty to express my sense of the great ability and zeal with which those officers have devoted themselves to the performance of their duties, and have thereby brought to a very satisfactory state of efficiency those important departments.

The General Museum of the College has hitherto consisted of the collections in the several branches of Natural History, with Geology and Mineralogy, and of the Cabinet of Physical Apparatus. But as the Statutes contemplate also that the Museum should contain a collection of objects of Art and Antiquity, arrangements have been made to form, on a moderate scale, such a collection as should be especially illustrative of Classical Archæology and History, and thereby serve for illustrating the Lectures of the Classical Professors. With this object, Mr. Lewis, Professor of Latin, has undertaken the inquiries and arrangements for procuring and organizing such a collection; and I have no doubt but that, under his zealous and enlightened supervision, it will become ultimately a highly useful and interesting department of the Museum.

The formation of this Museum of Classical Art and Antiquity has been promoted, in a very material degree, by a valuable donation presented to the College by the Department of Science and Art of the Board of Trade, consisting of an extensive collection of Casts, Specimens, and Drawings, illustrative of decorative art and manufactures, and of artistic design. This donation has been found highly useful to several departments of the College, especially in the School of Engineering; and a large number of illustrations of Classical Art (statues and bas-reliefs) which were thus procured, will, it is expected, be found available in the formation of the new Archeological Department of the General Museum.

The Museums of the Medical Faculty have also been considerably augmented, and rendered more proportionate to the necessities of instruction. There will be found annexed (Appendix G) the official Reports of the several Medical Professors, as to the extent and condition of the Museum collections of which they may be considered to have charge. But I beg leave to observe that the Museums of the Medical Faculty are not constituted by the Statutes any part of the General College Museum, and hence are not in the official charge of the Curator of that Museum; and there is not any special Curator of the Medical Museums. The necessity for the appointment of such an officer has become, however, very much felt, as those collections have been augmented, and the medical departments of the College have increased in number of Students. I have to report, also, that no proper accommodation having been provided in the College buildings for the Museums of the Medical Faculty, the principal part of those collections (especially those of Pathology and Midwifery) are merely temporarily stored in the room which properly should be appropriated to the Lectures of the Professors of the Legal, Mental, and Economical Sciences; and those gentlemen are put to considerable inconvenience by being thus prevented from making use of the Lecture-room designed for their departments, as will be found strongly expressed in their respective Reports, given in Appendix C, pp. 35, 39, 40, 41. The Students, and other Professors, also, are frequently much embarrassed by the complications which result as to hours and places of Lectures, by the necessity of accommodating, elsewhere in the College, those Professors whose proper place has been occupied by the Medical Museum.

This necessity for additional buildings to provide for the wants of the Medical Departments of the College has been brought under the notice of the University Senate, and of your Majesty's Government, and the propriety of providing for same has been fully admitted. I have the honour to annex (Appendix H) a copy of the documents which were laid before the Government on the subject; and I beg to represent the urgent necessity for means being supplied, in order to enable the Students of the Medical School to be accommodated, and the Professors to obtain, by a proper arrangement of the Museums, the means of suitably illustrating the branches of Medical Education of which they have charge. An Anatomical Lecture-room, especially, requires to be provided, as that which has hitherto been employed is physically incapable of containing the number of Students who have entered for attendance upon the Lectures in that department.

The Botanical Herbarium of the College has been very considerably increased, and has been revised and re-arranged by the care of the Professor of Natural

History, Mr. Smith, under whose active supervision also the arrangements of the Botanic Garden have been much improved. This source of instruction, which is so important as well for the purposes of Medical Science and Agriculture as of general Natural History, is still very incomplete in Queen's College, Cork, owing to the total absence of any Conservatory, or Hot-house, or other means of preserving plants over winter. The collection of plants is, therefore, necessarily limited to such as are capable of living out during the winter; and hence many of the most important families of plants, and tropical forms altogether, are incapable of being at all represented in the College Botanic Garden. Under such circumstances, the necessity for better provision in this respect is evident; and I trust that funds will be supplied for the erection of a Conservatory on such a scale as may suffice for the practical wants of the Professors in those departments of instruction which require to be illustrated by means of living plants.

TRIENNIAL VISITATION.

The Second Triennial Visitation of the College, as appointed by the Statutes, was held at the College, on Wednesday, 28th day of March, 1855. The Visitors present were the Right Hon. Maziere Brady, Lord Chancellor; His Grace the Archbishop of Dublin, the Lord Bishop of Cork, Cloyne, and Ross, the President of the College of Physicians, Ireland, and the President of the College of Surgeons, Ireland.

The usual formal business having been transacted, the Visitors proceeded to consider the case of Mr. John Pope Hennessy, Student, who appealed against an Order of Council, of the 9th June, 1854, by which he was deprived of his Prizes and Certificates, on the alleged ground of non-attendance on the Lectures of Dr. Wyville Thompson, at that time Professor of Natural History in the College.

The Visitors, upon hearing Mr. Hennessy's case, ordered a reference to the Council, to inquire whether Mr. Hennessy's attendance upon Dr. Thompson's Lectures was such as to reasonably satisfy the rules of the College, and whether there was a fund from which Mr. Hennessy's Prizes could be paid to him; and the Council having instituted an inquiry, found that there was sufficient evidence that Mr. Hennessy's attendance had been such as, under the circumstances of the Professor not having kept a proper class roll, might be considered as qualifying Mr. Hennessy to receive his Prizes, and that there were funds to pay those Prizes; and the Visitors having received the Report of the Council to the above effect, approved of the amount of Mr. Hennessy's Prizes, and the Certificates of same being delivered to Mr. John Pope Hennessy, which was accordingly done.

The detailed proceedings in this Visitation are given in Appendix I.

In order to avoid the recurrence of such irregularity as gave rise to the above appeal, by a Professor estimating the attendance of a Student on his lectures, without keeping a regular roll of attendance, a Code of Regulations on the subject was framed and adopted by the Council, which will be found given in Appendix I.

FINANCIAL CIRCUMSTANCES OF THE COLLEGE.

I have considered the occasion of thus resuming my Annual Report of the College, a proper opportunity to annex a Statement of the Financial Circumtances of the Institution, which has been prepared by the Bursar, Mr. Fitzgerald. The several accounts are given in the Appendix K.

I shall merely indicate their general nature here.

The Revenues of the College are derived from three sources—

1st. The endowment of £7,000 per annum, which is granted by the Act of Parliament founding the College, and the distribution of which is regulated by the Statutes, according to the Scale given in the Appendix K, Account, No. 1.

2nd. Parliamentary Grant for Fitments, Apparatus, Museums, and other Appliances for Instruction. Of this class of funds there were given—

In 1849, a Grant of £4,000 for supplying outfit of Books and Apparatus, &c., preparatory to opening the College, and for the first three years of its operations. The mode of appropriation of this sum is detailed in Account, No. 2.

In the years 1854–55, and 1855–56, Grants of £1,600, each year, were made, for maintenance and increase of the Libraries, Museums, Collections of Apparatus, Laboratories, and Botanic Gardens, and for the Heating and Lighting, Advertising, Printing, and other Collegiate expenses, which had been previously defrayed from fees levied on the Students, but which fees it was considered

expedient to reduce very considerably. The details of the Expenditure of that Grant for those two years ending 31st March, 1856, are given in Account, No. 3.

3rd. The third source of income is from Matriculation and College Fees paid by Students, and from small fines imposed for breaches of discipline, and Library and Robe-press charges. In 1854, when the Parliamentary Grant of £1,600 was made, the fees payable to the College by Students were reduced to a very small (almost nominal) sum, and hence the amount of revenue from this source has since been very small. The mode of expenditure will be shown by Account, No. 4.

The income of the Professors is derived partly from their College salary, as given in the Account, No. 1, of the endowment, and partly from fees paid by the Students for attendance on the Lectures of the Professors. These fees are received by the Bursar on account of the Professors, and do not in any way pass into the College accounts. For more perfect information, however, an account is annexed, No. 5, of the sums received in fees from Students by each Professor in each year since the College opened, that is, from 1849 to 1856.

In submitting the above accounts, which exhibit, as I believe, a full and correct statement of every financial transaction of the College since its opening in 1849, I feel it my duty to express my sense of the untiring zeal and practical ability with which the Bursar, Mr. Fitzgerald, has discharged the duties of his office. Mr. Fitzgerald has not merely had charge of the financial business of the College, but is also charged with the duty of acting as Officer of the Board of Works, for the conservation, repairs, &c., of the College buildings, fitments, &c., and of supervising the duties of the Porters and inferior Officers of the College, in which regard he acts upon and carries out the general instructions given by the President. In all these respects Mr. Fitzgerald's performance of duty has been most satisfactory, and highly conducive to the well-working and efficiency of the College.

I beg leave also to observe, that, by the death of Mr. Francis Albani, late Registrar, the College sustained a very considerable loss, as, from the great knowledge of educational business and the extensive literary information possessed by that most estimable gentleman, his assistance was found of great value to every department of the College in the numerous arrangements with which his duties were connected. In the performance of those duties, Mr. Albani was most conscientious and indefatigable; and it is to be feared that he allowed a too unintermitting labour and anxiety to undermine his health. In reference to Mr. Kenny, the present Registrar, I beg to say that he has given, since his appointment, much satisfaction, and has shown great zeal in the performance of his duties.

APPOINTMENTS OF STUDENTS.

The arrangements lately introduced for conferring appointments in the public service, by competitive examination, have opened to the Students of this College an avenue to distinction, of which they have not been slow to avail themselves, and they have thereby given full proof of the excellence of the system of education organized in the College, and of the efficiency with which it is carried out by the several Professors. I shall beg leave to notice the names of those Students who have obtained those distinctions.

INDIAN CIVIL SERVICE.

In my last Report I had the honour to state the circumstance of an appointment in the Indian Civil Service having been allotted to this College by the Right Hon. Lord Broughton, then President of the Board of Control, at the recommendation of the Earl of Clarendon, K.G., to be conferred on a Student of the College, to be selected by competitive examination. This high honour was obtained by Mr. Moriarty, who was, therefore, the first individual appointed to the Indian Civil Service by virtue of competitive examination. The principle thus happily inaugurated was followed up by the institution of the examinations in London, under the direction of the India Board; and there have been since appointed to the Indian Civil Service two Students from this College, Mr. Daly and Mr. Wall, making thus three Students who have attained that distinction by virtue of the means of proving their knowledge and capability which the competitive examinations have afforded.

INDIAN MEDICAL SERVICE.

The principle of competitive examination having been applied to the selection of candidates for the Indian Medical Service, four gentlemen—viz., Mr. Ridings, Mr. Busteed, Mr. Rice, and Mr. Larken—have succeeded in obtaining those appointments from this College.

EXAMINATIONS AT WOOLWICH FOR THE ROYAL ENGINEERS AND ARTILLERY.

No special classes of preparation have been as yet formed in this College for the examinations at Woolwich; but some Students having presented themselves, although without special preparation, two were successful—Mr. Henry Shea and Mr. Sexton. It had been feared by some members of the College that the formation of special classes for instruction in those professional subjects might interfere with the proper training of the Students in general education. It is, however, now under consideration whether arrangements may not be devised for affording the special instruction required for the Military Scientific Service, though interfering with the other departments of the College; and I trust that such will be done, and that the Students of this College will be afforded assistance in preparing for that important branch of the public service, on the same principle as has conducted so many of our young men to distinguished success in other departments of practical and professional life.

The success which has attended the Students of this College in the several examinations for Honors and Degrees in the Queen's University in Ireland, will be found detailed in the Report submitted to your Majesty by the Vice-Chancellor of the University, and need not be referred to in this Report.

CONDUCT AND DISCIPLINE OF STUDENTS.

I have much pleasure in being able to report that the excellent conduct by which the Students of this College have been distinguished in former years has been continued since last Report, and that but very few instances have occurred, as compared with the number of Students, in which any violation of discipline has taken place. In one case, where a rather more serious infraction of Collegiate rules had called for the intervention of the College Council, the offender was subjected to the penalty of rustication for two years.

In order to provide for effectively securing the regular attendance of the Students at the Lectures of the Professors, rules have been framed to regulate the calling and marking of the rolls, and the wording of the certificates of attendance, so as to express accurately therein the degree of diligence which the Student has shown. A copy of these rules is given in the Appendix L, together with the special Report of the Vice-President, Dr. Ryall, to whose charge the maintenance of discipline is more specially committed by the College Statutes.

In regard to the religious and moral conduct of the Students, I have full reason to believe that it continues to be, as it has been in former years, perfectly satisfactory. Notwithstanding the great increase in the number of Matriculated Students, it is found that of late years the number residing in licensed boarding-houses is very small, as, almost without exception, those Students whose parents or guardians do not themselves reside in the neighbourhood of the College, are placed to reside with private friends, who represent the parents, and accept the charge of their moral and religious conduct, as required by the College Statutes. As regards the licensed boarding-houses, a list of those now recognised, and of the rules to which they are subjected, is annexed (Appendix L); and in regard to the Reports of the Deans of Residence, it is known that the present arrangements do not admit of any Report being made by the Roman Catholic Dean. No Report has been made by the Wesleyan Dean; and the Reports of the Rev. Mr. Perrin, Church of England Dean, and of the Rev. Mr. Magill, Presbyterian Dean, are subjoined in Appendix.

In regard to the relative proportions of the several religious denominations among the Students, I beg leave to state the following numbers.

Of the 144 Matriculated Students who attended the College in the last Session (1855–56), there were—

Roman Catholics,	73,	or per cent.	50·6
Church of England,	59,	„	41·0
Presbyterian,	2,	„	1·4
Independent,	2,	„	1·4
Unitarian,	2,	„	1·4
Wesleyan,	6,	„	4·2
	144		100·0

It is interesting to compare these proportions with the numbers given in last Report for the Session 1852–53, and for the intervening years for which no Report was made, 1853–54, and 1854–55. There were—

	1852–3.	1853–4.	1854–5.
Roman Catholics,	56	65	57
Church of England,	38	38	47
Presbyterian,	2	1	1
Wesleyan,	5	7	7
Independent,	2	1	1
Unitarian,	2	1	–
	105	113	113

These numbers show the very important result, that, whilst the total number of Matriculated Students has so much increased—being more than doubled since the first year the College was in action—the proportions of the Students of the several religious denominations among each other has not materially changed; thus proving that the great advantages of the improved system of education are appreciated and availed of by every denomination of your Majesty's subjects, and that in the Queen's Colleges the young men of the middle classes of all persuasions are practically receiving and profiting by those lessons of mutual respect and esteem which will enable them, in their later life, to fulfil their duties as subjects and as citizens of the State, by harmonious co-operation for the interests of the country, and by enlightened allegiance to the Crown.

(Signed)

ROBERT KANE,

President.

January 20th, 1857.

APPENDIX A.

Queen's University in Ireland.—Queen's College, Cork.

Faculties of Arts, Medicine, and Law.—Session, 1855–56.

President: Sir Robert Kane, F.R.S., M.R.I.A.

Vice-President: John Ryall, LL.D.

Professors.

The Greek Language,	John Ryall, LL.D.
The Latin Language,	Bunnell Lewis, A.M.
History and English Literature,	Rev. Charles F. Darley, A.M.
Modern Languages,	Raymond de Vericour, D. es. L.
Celtic Languages,	Owen Connellan, Esq.
Logic and Metaphysics,	George Sidney Read, A.M.
Mathematics,	George Boole, LL.D.
Natural Philosophy,	John England, A.M.
Chemistry,	John Blyth, M.D.
Natural History,	W. Smith, F.L.S.
Geology and Mineralogy,	Robert Harkness, F.G.S., F.R.S.E.
Engineering,	Alexander Jack, A.M.
Agriculture,	Edmund Murphy, A.B.
Anatomy and Physiology,	J. Henry Corbett, M.D., L.R.C.S.I.
Practice of Medicine,	Denis C. O'Conner, A.B., M.D.
Practice of Surgery,	Denis B. Bullen, M.D.
Materia Medica,	Alexander Fleming, M.D.
Midwifery,	Joshua R. Harvey, A.B., M.D.
English Law,	Michael Barry, M.R.I.A.
Jurisprudence and Political Economy,	Richard Horner Mills, A.M.

Officers.

Curator of the Museum,	Robert Harkness, F.G.S., F.R.S.E.
Registrar,	Robert John Kenny, Esq.
Bursar,	Edward M. Fitzgerald, Esq.
Librarian,	Matthias O'Keeffe, A.M.

The College Session, 1855–56.

The *First Term* will commence on the 16th of October, 1855, and end on the 21st of December.

The *Second Term* will commence on the 7th of January, 1856, and end on the 15th of March.

The *Third Term* will commence on the 31st of March, 1856, and end with the Session, on the 14th of June.

Subjects of the Matriculation Examinations.

For the Faculties of Arts, Medicine, and Law.

English Grammar.

Greek.—Xenophon—First Book of the Anabasis, Grammar.

Latin.—Virgil—First Book of the Æneid.

Latin Prose.—Re-translation from English into Latin of short sentences from Cæsar, Gallic War, Book I.

Mathematics.—Arithmetic, Principles of Notation, Vulgar and Decimal Fractions, with the reasons of the different rules. The rule of Proportion, with its commercial applications, including Simple Interest.

Euclid.—Book I.

For the Department of Civil Engineering.

The outlines of Modern Geography: Grammar.

Mathematics.—Arithmetic, Principles of Notation, Vulgar and Decimal Fractions, with the reasons of the different rules. Rule of Proportion, with its commercial applications; extraction of the Square Root, both of whole numbers and decimals.

Algebra.—Explanation of the signs and meaning of an Index, calculation of the value of Algebraic expressions, when particular values are given to the letters which they involve.

Euclid.—Books I., II., III., IV., and VI. with the definitions of Book V.

For the Department of Agriculture.

The English Language.—Grammar and Composition.

Mathematics.—First Four Rules of Arithmetic; Proportion; Vulgar and Decimal Fractions; Extraction of the Square Root.

Modern Geography.

Matriculated Students.

Persons intending to become *Matriculated* Students of the College, in any of the Faculties or Departments of Faculty, are required to pass the Matriculation Examination, whereby they are declared competent to pursue the course of study prescribed to Students in that Faculty or Department of Faculty, and, on completing this course, are entitled to become Candidates for the Degrees or Diplomas granted by the Queen's University in Ireland.

The Examinations for the Matriculation *of Students in the several Faculties and Departments of Faculty will commence at Ten o'Clock, on Tuesday, the 16th of October*, 1855.

Candidates for Matriculation are required to forward their names to the Registrar of the College, and to state the Faculty or Department of Faculty, for which they propose to Matriculate, at least *three days* before the commencement of the Matriculation Examinations.

Each Candidate, before being admitted to the Matriculation Examination, is required to pay to the Bursar of the College, the *Matriculation and College Fees* for the year, amounting together to 10*s.* for each Faculty or Department of Faculty. These fees will be returned to such Candidates as may fail in passing the Matriculation Examination.

After passing the Matriculation Examination, and before joining the several Classes, each Student of the Literary and Science Divisions of the Faculty of Arts, is required to pay to the Bursar of the College, the sum of £4 15*s.* being a *moiety* of the *Class Fees* for the Session. The remaining moiety will be required on or before the 20th of December, 1855.

Students of the Faculties of Medicine and Law, and of the Departments of Engineering and Agriculture in the Faculty of Arts, are required to pay on Matriculation, the *whole* of the Fees of the Classes for which they enter.

Junior Scholars are exempt from the payment of more than *one* moiety of the *Class Fees* for the Session.

Matriculated Students are required to wear an academic dress.

In May and June are held General Examinations in the subjects lectured upon during the Session; and a sum of One Hundred Pounds is awarded in Prizes to the most distinguished Students.

Students who have pursued part of their studies in any one of the Queen's Colleges, or in any University capable of granting Degrees in the several Faculties of Arts, Law, and Medicine, are permitted, on passing the prescribed Examinations, to take corresponding rank in this College, and also to compete for Scholarships of the corresponding year; provided they shall not hold at the same time a Scholarship or other office of emolument in any University, or College of a University.

Non-Matriculated Students.

Gentlemen who do not propose, or are not prepared to Matriculate, but who wish to avail themselves in other respects of the advantages offered by the College, are permitted to attend the Professors' Lectures, without passing any of the Examinations, on paying to the Bursar the regulated College and Class Fees, amounting generally to £2 5*s.* for each course; but they cannot become Candidates for Scholarships or Prizes, or enjoy the other privileges of Matriculated Students. They are, however, entitled to the use of the Library, on subscribing the Library Regulations and paying a fee of 15*s.* for each Session; and the Professors are authorized to recommend to the Council to grant Certificates of Honor to the most distinguished of them in their respective Classes.

East India Civil Service.

The attention of parents and guardians is directed to the new arrangements for the East India Civil Service; according to which Writerships are open to competition at Examinations prescribed by the Board of Control. The courses of Lectures in the Queen's College, Cork, are well adapted to prepare Candidates for this Examination, which includes the following branches of knowledge, their relative importance being indicated by the annexed scale of marks.

English Language and Literature.

Composition,	500	Mathematics, pure and mixed,	1,000
English Literature and History, including that of the Laws and Constitution,	1,000	Natural Science, that is, Chemistry, Electricity, and Magnetism, Natural History, Geology and Mineralogy,	500
	1,500	Moral Sciences, that is, Logic, Mental, Moral and Political Philosophy,	500
Language, Literature, and History of Greece,	750	Sanscrit Language and Literature,	375
" " " Rome,	750	Arabic Language and Literature,	375
" " " France,	375		
" " " Germany,	375		
" " " Italy,	375		6,875

Library and Museum.

The Library and Museum are open, under certain regulations, to all the Students.

Faculty of Arts.

Lectures.

The Lectures of the several Professors in this Faculty will commence on Monday, the 22nd of October, 1855. The Lectures, however, on the "English Language" and "Logic" will not be delivered till the commencement of the Second Term.

Degrees in Arts.

Students intending to take the Degree of A.B. in the Queen's University, must, on entering the College, pass the Matriculation Examination.

The Undergraduate Course for the Degree of A.B. occupies three Sessions, at the end of which Students are admitted to Examination for the Degree of A.B. from the Queen's University in Ireland, provided they have attended the College Lectures for at least Two full Terms in each Session, have passed the prescribed College Examinations, and are recommended by the President of the College for promotion to the Degree.

Course of Study for the Degree of A.B.

FIRST YEAR.		SECOND YEAR.	
The Greek Language,	Three Terms.	Logic,	One Term.
The Latin Language,	Three Terms.	Chemistry,	Three Terms.
The English Language,	One Term.	Principles of Zoology and Botany,	Three Terms.
The Modern Languages,	Three Terms.	The Higher Mathematics;—or	Three Terms.
Mathematics,	Three Terms.	The Greek and Latin Languages,	

THIRD YEAR.

Natural Philosophy,	Three Terms.
History and English Literature,	Two Terms.
Physical Geography,	One Term.
Metaphysics, or	Two Terms.
Jurisprudence and Political Economy,	Each One Term.

Course of Study for the Degree of A.M.

A Candidate may proceed to obtain his Master's Degree by Examination in any one of the four following Courses of Study, viz.:—

1. Classics, which shall be considered as including—

   The Greek and Latin Classic Authors; Prose Composition in Greek, Latin, and English; a Modern Foreign Language.

2. English Philology and Criticism. Logic. Metaphysics, or (in place of Metaphysics, at the election of the Candidate), Political Economy and Jurisprudence.

3. Mathematical and Physical Science, which shall be considered as including the following subjects:—

   Algebra, including the Theory of Equations.
   Analytical Geometry. Trigonometry, Plane and Spherical.
   The Differential and Integral Calculus. Differential Equations. Theory of Probabilities.
   Statics and Dynamics. Hydrostatics. Hydraulics and Pneumatics. Optics. Heat. Electricity and Magnetism. Plane and Physical Astronomy.

4. Experimental and Natural Sciences, which shall be considered as including the following subjects:—

   Experimental Physics.
   Laws of Chemical Constitution and Combination.
   General Properties and Preparation of Organic and Inorganic Bodies.
   Structure, Functions, and Classification of Animals and Vegetables.
   Zoological and Botanical Geography.
   Elements of General Geology and Palæontology, of Physical Geography, and of Crystallography, and Mineralogy.

Every Candidate must be a Bachelor of Arts of the Queen's University and must have attended in one of the Queen's Colleges, for at least Two Terms, subsequent to his having received the Bachelor's Degree, a Course of Lectures on some one of the subjects of the Course of Study, which he may have selected to proceed in for his Degree.

Diploma in Engineering.

Engineering Students are required to pass a Matriculation Examination (for which see page 12), and pursue the following Courses of Study during at least two years:—

FIRST COURSE.		SECOND COURSE.	
Mathematics,	Three Terms.	Mathematics,	Three Terms.
Chemistry,	Do.	Natural Philosophy,	Do.
Mineralogy, Geology, and Physical Geography,	Do.	Motive Powers, Construction, and Theory of Machines,	Do.
Drawing,	Do.	Drawing,	Do.
Descriptive Geometry, Surveying, and Mapping,*	Do.	Civil Engineering, including the Principles of Architecture, and Engineering Finance,	Do.

Students who shall have completed the above Course of Study, and been engaged during at least two years (of which not more than one shall be contemporaneous with their College Course) in acquiring a practical knowledge of Engineering in all its branches, and of the Construction of Buildings used for public and domestic purposes, under the direction of an Engineer recognised by the College Council, will be admitted to examination for the Diploma of Civil Engineering.

Bachelors of Arts of the Queen's University are allowed to take rank as Second Year's Students of Engineering, and to proceed for the Diploma as such, provided they shall, in the subsequent period of their Engineering Studies, have attended the full Courses of Instruction in Drawing, Mapping, Surveying, and all other subjects, collegiate and practical, now required by the Ordinances, but not previously attended or included in their A.B. Course.

Diploma in Agriculture.

Candidates for this Diploma are required to pass a Matriculation Examination (for which see page 12), and afterwards pursue the following:—

Course of Study for the Diploma in Agriculture.

FIRST YEAR.		SECOND YEAR.	
Natural Philosophy,	Three Terms.	Mineralogy, Geology, and Physical Geography,	Three Terms.
Chemistry,	Do.	Surveying and Mapping,* and Farm Agriculture,	Do.
Principles of Zoology and Botany,	Do.	History & Diseases of Farm Animals,	Do.
Theory of Agriculture,	Do.	Practice of Agriculture, including Farm Finance and Accounts,	Do.

Students who shall have passed through the above Course, and also attended, during twelve months, the practical working of a farm, under the direction of an Agriculturist approved by the College Council, will be admitted to Examination for the Diploma in Agriculture.

Students intending to qualify themselves for the management of estates, or of extensive farms, are recommended to attend also Sessional Courses of Instruction in:—

1. The law of Landlord and Tenant, and the Elements of Conveyancing.
2. Elements of Political Economy and Statistics, as applied to Agriculture and Farm Finance.

Faculty of Medicine.

Lectures, &c.

The Medical Session will be opened on Wednesday, 31st October, 1855, at Two o'Clock, by an address from the Dean, and the Courses of Lectures will commence as under:—

Anatomy and Physiology—Friday, 2nd November, at One o'Clock, to be continued daily, except on Saturdays, at the same hour.

Practice of Medicine—Thursday, 1st November, at Three o'Clock, to be continued on Tuesdays and Thursdays, at the same hour, and on Saturdays, at one o'Clock.

Practice of Surgery—Friday, 2nd November, at Three o'Clock, tobe continued on Mondays, Wednesdays, and Fridays, at the same hour.

Materia Medica—Thursday, 1st November, at Two o'Clock, to be continued on Mondays, Thursdays, and Fridays, at the same hour.

Midwifery—Friday, 2nd November, at Four o'Clock, to be continued on Mondays, Wednesdays, and Fridays, at the same hour.

The Course of Practical Anatomy will be conducted by the Professor of Anatomy and Physiology, assisted by a Demonstrator.

The Department will be opened for Dissections on the 16th October.

The Anatomical Demonstrations will commence on 5th November, and be continued daily at Twelve o'Clock, except Saturdays.

Chemistry.	Natural Philosophy.
Practical Chemistry.	Medical Jurisprudence.
Natural History and Botany.	Modern Languages.

* Note. I.—The instructions in Mapping and Surveying required in the Courses for Diplomas in Engineering and Agriculture, include regular Practical Exercises and Observations in the Field, with the use of Instruments, continued throughout the Session.

II.—The Drawing required by the above Curriculum is understood to include Free-hand drawing, as well as Special Mechanical Drawing.

Degrees in Medicine.

Ordinance of the Senate of the Queen's University in Ireland, regarding the Qualification and Examination for the Degree of M.D.

1. Every Candidate for the Degree of M.D. shall produce a Certificate from the Council of one of the Queen's Colleges, that he has passed a full Examination in the subjects of study prescribed in the Course of Matriculation for Arts, and has been admitted a Matriculated Student of the College in the Faculty of Medicine.

2. The Curriculum shall extend over a period of at least four years, and shall be divided into two periods of at least two years each.

3. The first period shall comprise attendance on the following Courses of Medical Lectures:—

Chemistry—Six Months, at least Three Lectures each Week.
Botany and Zoology—Six Months, Three Lectures each Week, with Herborizations for practical study.
Anatomy and Physiology—Six Months, Five Lectures each Week.
Practical Anatomy—Six Months.
Materia Medica and Pharmacy—Six Months, Three Lectures each Week.

4. The second period shall comprise attendance on the following Courses of Medical Lectures:—

Anatomy and Physiology—Six Months, Five Lectures each Week.
Practical Anatomy—Six Months.
Theory and Practice of Surgery—Six Months, Three Lectures each Week.
Midwifery and Diseases of Women and Children—Six Months, Three Lectures each Week.
Theory and Practice of Medicine—Six Months, Three Lectures each Week.
Medical Jurisprudence—Three Months, Three Lectures each Week.*

5. In addition to the above Courses of Lectures, Candidates shall have attended during the first period of the above Curriculum—

Practical Chemistry, in a recognised Laboratory—Three Months.
Medico-Chirurgical Hospital, recognised by the Senate, containing at least sixty beds; together with the Clinical Lectures therein delivered, at least Two each Week—Six Months.

6. And during the second period—

Practical Midwifery, at a recognised Midwifery Hospital, with the Clinical Lectures therein delivered, for a period of Three Months, in an Hospital containing not less than fifteen beds.
Practical Pharmacy—Three Months.
Medico-Chirurgical Hospital, recognised by the Senate, containing at least sixty beds, together with the Clinical Lectures therein delivered—Eighteen Months.

7. Candidates, before being admitted to the Degree of M.D., shall pass two Examinations, the first Examination comprising the subjects of the first period of the Curriculum; the second comprehending subjects of the second period of study. It shall be competent for Students to present themselves for their first Examination at the termination of the first period of the Curriculum, or at any after period to be fixed by the Senate, previous to their undergoing the second Examination.

8. By the Charter of the Queen's University, *Candidates are required to have attended at least* one-third *of the Courses of Medical Lectures in some one of the Queen's Colleges.* For the remainder of the Courses of Medical Lectures, authenticated Certificates will be received from the Professors or Lecturers in Universities, Colleges, or Schools recognised by the Senate of the Queen's University in Ireland.

9. Candidates will also be required to have attended *in some one of the Queen's Colleges,* Lectures on one Modern Language for Six Months, and Lectures on Natural Philosophy for Six Months.

10. The Examinations will be conducted principally by printed papers, to which written answers shall be given; but the Examiners shall also be at liberty to add such *viva voce* Examination on the subjects of the written paper, and to call for such demonstrations and experiments as they may deem necessary.

11. The above regulations will be binding on all Students commencing their Medical Studies on or after the 1st October, 1852; but Students already engaged in their Medical Studies are at liberty, either to complete their courses according to the Ordinance of 30th June, 1850, or according to the present Ordinance.

Faculty of Law.

Lectures.

The Complete Course for each Class consists of Twenty-four Lectures, by each of the Professors in this Faculty, in each Collegiate Session. These Lectures are delivered in the interval between the close of the Michaelmas Law Term, and the Christmas recess, in the second Collegiate Term, commencing in the month of February, and in the interval between Easter and Trinity Law Terms.

* Note.—The 25th of November in each year is the last day of entering for the Six Months' Courses of Lectures in the above Curriculum. All the Lectures are recognised by the Colleges of Surgeons of Dublin, Edinburgh, and London.

Degrees in Law.

Candidates for the Diploma of Elementary Law must have passed a Matriculation Examination* (see page 12), and pursued the following—

Course of Study for the Diploma of Elementary Law.

First Session—Law of Property and Principles of Conveyancing—Jurisprudence.
Second Session—Equity and Bankruptcy—Civil Law.
Third Session—Common and Criminal Law.

Candidates for the Degree of LL.B. will be admitted to Examination for that Degree from the Queen's University in Ireland, provided they shall have proceeded to the Degree of A.B., and shall have attended the Lectures and passed the Examinations prescribed for the Elementary Course, and shall also have pursued the following—

Additional Course of Study for the Degree of LL.B.

Fourth Session—A more extended Course of Study in the subjects appointed for the Diploma—The Law of Evidence and Pleading in the Courts of Common Law and Equity—Medical Jurisprudence—Constitutional, Colonial, and International Law.

Students who have obtained the Degree of LL.B. will, at the expiration of three years after they have obtained the Degree, be admitted to the Examination for the Degree of LL.D.

Scholarships.

The Examinations for Scholarships will commence on Tuesday, the 16th of October.† The College Council are empowered to confer at these Examinations, Ten Senior Scholarships of the value of £40 each, and Forty-five Junior Scholarships, viz.—Fifteen in Literature, and Fifteen in Science, of the value of £24 each; Six in Medicine, Three in Law, and Two in Civil Engineering, of the value of £20 each; and Four in Agriculture, of the value of £15 each—and if competent Candidates present themselves, these Scholarships will be awarded to the most deserving. The Scholarships are tenable for one year only; but the Scholars of each year are, at its expiration, eligible to become Candidates for the Scholarships of the succeeding year. A Scholarship, however, of the same year in the same Faculty cannot be held twice by the same Student.

The Scholarships of the first year are open to all Students of the respective Faculties who have passed the Matriculation Examination. Those of the second, third, and fourth years are open to all Students who have passed the Examinations, and attended the Lectures prescribed in the preceding part of their Course of Study.

If any Student be placed, at the Examinations for Junior Literary and Science Scholarships, first on both the Lists of Candidates, he will be entitled to a Scholarship of each Division; but in no other case will the same Student be permitted to hold two Scholarships.

No Student is entitled to become a Candidate for a Scholarship, until he shall have paid the College and Class *Fees for the current Session.*

The Scholarship Endowment is paid by Quarterly Instalments, and its tenure is dependent on the Scholar's performance (so far as required by the Council) of the duties prescribed by the Statutes. These duties are, to take charge of the Class-Rolls, to register the attendance of the Students, to assist the Professor, &c.

If the Scholar be not obedient to the orders of the Council, be removed from the College, or, by non-attendance on Lectures, fail to keep the terms required for promotion, he forfeits his Scholarship.

The Scholar in the Faculty of Medicine must attend during the year of his appointment the Classes recommended for his year of study, in the order of the following Curriculum:—

FIRST YEAR.
Anatomy and Physiology.
Chemistry.
French or German.
Natural Philosophy.
Zoology and Botany.

SECOND YEAR.
Anatomy and Physiology.
Materia Medica.
Practical Anatomy.
Practical Chemistry.

THIRD YEAR.
Surgery.
Midwifery.
Practical Anatomy.
Clinical Surgery.

FOURTH YEAR.
Practice of Medicine.
Medical Jurisprudence.
Clinical Medicine.

* It will be sufficient for such Candidates to have passed this Examination at *any* time previous to applying for the Diploma. By the Act of Parliament, 14 and 15 Vic., cap. 88, it is provided, that every person who, as a Matriculated or Non-Matriculated Student, shall attend the prescribed Lectures, and pass the prescribed Examinations of the Professors of the Faculty of Law for two Collegiate years, and who shall have duly served, as an apprentice or clerk, by contract in writing, duly stamped at or before the signing thereof, or within Six months after, for the term of Four years, shall, at any time after the expiration of Five years from the commencement of such attendance on Lectures, or of such period of service, which shall first happen, be qualified to be admitted as an Attorney or Solicitor as fully and effectually as any person having been bound, and having served Five years is now qualified to be admitted. See also the same Act for the privileges extending to Graduates of the Queen's University, respecting admission to the profession of Attorney or Solicitor.

† See Programme of Scholarship Examinations.

JUNIOR SCHOLARSHIPS.

Subjects of Examination for Literary Scholarships of the First Year.

The Greek Language:
Homer—The Iliad, Books I., II., III., IV., V., VI.
Euripides—The Medea.
Herodotus—The Second Book.
Xenophon—The Anabasis, Books I., II., III.
Lucian—Walker's Selections.
Greek Prose—Re-translation of Short Sentences from English into Greek.

The Latin Language:
Virgil—First Six Books of the Æneid, the Georgics.
Horace—First Two Books of the Odes, the Satires, and the Epistles, Books I., II.
Cicero—De Senectute, and De Amicitiâ.
Sallust—Conspiracy of Catiline, and Jugurthine War.
Cæsar—The Gallic War, Books V., VI.
Latin Prose—Re-translation from English into Latin of portions of Cicero.

N.B.—The Examination in Greek and Latin will be conducted partly *viva voce*, and partly by printed questions.

The English Language:
Original Essays on Subjects proposed by the Examiner.

History and Geography:
Grecian History, to the Death of Alexander the Great.
Roman History, to the Accession of Augustus.
Outlines of Ancient and Modern Geography.

Subjects of Examination for Literary Scholarships of the Second Year.

The Greek Language:
Homer—Iliad, Books XX. to XXIV. inclusive.
Æschylus—Prometheus Vinctus.
Sophocles—Œdipus Coloneus.
Herodotus—Book I.
Thucydides—Book I.
Composition in Prose and Verse.

The Latin Language:
Virgil—Eclogues and Æneid.
Horace—Odes, Satires, and Epistles.
Terence—Phormio.
Cicero—Tusculan Disputations. De Oratore.
Juvenal—Satires, I., III., VIII., XIII., XIV.
Sallust—Jugurthine War.
Livy—Book IV.
Tacitus—Histories, Book I.
Composition in Prose and Verse.

The English Language:
Craik's History of English Literature, Volume I.

The French Language:
Bossuet—Oraisons Funèbres.
Lafontaine—Fables.
Moliere—L'Avare.
Racine—Athalie, Esther.

Subjects of Examination for Literary Scholarships of the Third Year.

The Greek Language:
Homer—Iliad, Books XX. to XXIV. Odyssey, Books XII. to XVIII. inclusive.
Æschylus—Prometheus Vinctus.
Sophocles—Œdipus Coloneus.
Euripides—Medea, Alcestis, Orestes.
Plato—Apology and Crito.
Thucydides—Book I.
Herodotus—Book I.
Compositions in Prose and Verse.

The Latin Language:
Virgil—Eclogues, Georgics, and Æneid.
Horace—Odes, Satires, and Epistles.
Cicero—Tusculan Disputations. Actiones Verrinæ. De Oratore.
Terence—Adelphi and Phormio.
Juvenal—Satires I., III., VIII., XIII., XIV.
Livy—Book IV.
Tacitus—Annals, Book I. Histories, Book I.
Composition in Prose and Verse.

The English Language:
Craik's History of English Literature, Volumes III. and IV.

The French Language:
Corneille—Cid. Cinna.
Boileau.—Satires, Epistles, Art Poétique.
Montesquieu—Considérations sur la grandeur et la décadence des Romains.

Subjects of Examination for Science Scholarships of the First Year.

Arithmetic.
Mensuration of rectilineal figures and of the circle.

Algebra:
The Solution of Simple and Quadratic Equations with one or more unknown quantities. Easy questions in the application of Algebra to Geometry. Arithmetical and Geometrical Progressions. The nature of Logarithms.

Euclid—Books I., II., III., and IV., with deductions.

Trigonometry:
Definitions of the Sine, Tangent, &c., of an angle. The easier analytical Formulæ. The Solution of Plane Triangles, with Demonstrations. Nature and use of the Tables.

Subjects of Examination for Science Scholarships of the Second Year.

The Higher Arithmetic.
Mensuration, with Formulæ.

Algebra:
The Solution of Equations with one or more unknown quantities. Elimination. Theory and use of Logarithms. Theory of Equations. Binomial and Exponential Theorems. Compound Interest and Annuities.

Geometry:
Euclid—Books I., II., III., IV., VI., with deductions. Application of Algebra to Geometry. Conic Sections.

Trigonometry:
The Solution of Plane Triangles with demonstrations of the formulæ. Theorems relating to single arcs. Theorems relating to the sums and differences of arcs. Application to heights and distances. Elements of Spherical Trigonometry.

Subjects of Examination for Science Scholarships of the Third Year.

Logic:
Aldrich's Logic. The Theory of Hypothetical Syllogisms and of Induction, and the New Analytic of Logical Forms, as contained in the Works of Mill, Whately, Thompson and Baynes.

Mathematics:
Algebra—Theory of Equations and Methods of Approximation. Elimination, Summation of series. Binomial and Exponential Theorems. Scales of Notation, &c.
Trigonometry—Plane and Spherical, with Astronomical applications.
Analytical Geometry.
Differential Calculus, involving demonstrations of the rules for differentiating Algebraic, Circular and Exponential Functions, founded upon a clear statement of the nature of Limits and Definition of a Differential Co-efficient. Taylor's and Maclaurin's Theorems. Maxima and Minima. Criteria of the same with proofs. Equations of Tangent, Normal, Evolute, &c.
Integral Calculus, including more particularly Rational Fractions, Binomial Differentials, Areas of Curves, Rectification of Curves, Cubature of Solids of Revolution.

Chemistry:
Laws of Combination and Affinity. Constitution and Properties of Inorganic and Organic Bodies treated during the course. Organic Analysis. Principal Theories of Organic Chemistry.

Zoology and Botany:
Animal and Vegetable Physiology and Organography.

Subjects of Examination for Engineering Scholarships of the First Year.

Arithmetic:
Mensuration:
Algebra:
Euclid:
Trigonometry:
} As for Science Scholarships of the First Year.

Subjects of Examination for Engineering Scholarships of the Second Year.

Mathematics:
The same as for Science Scholarships of the Second Year.

Mineralogy, Geology, and Physical Geography:
Form, structure, physical, and chemical characters of Minerals. Description of the

more important Simple Minerals. General Structure of the Earth; its form, density, and internal temperature. Causes of Geological Phenomena. Classification of Rocks. Characters of organic remains. Description of Stratified Formations. Ingneous Rocks; Veins, Volcanos, Earthquakes, Elevation of Land and Mountain-Chains. Application of Mineralogy and Geology to Engineering—as Mines, Building Materials, &c.

Application of Physics, Geology, and Natural History to the general condition of the globe.

Chemistry:
Laws of Combination and Affinity—Preparation and Properties of the Chief Inorganic Substances—Metallurgic Operations—Mortars and Cements.

Surveying and Engineering:
Descriptive Geometry and Projection—Surveying, Levelling, Plotting Plans and Sections—Uses of Instruments in Engineering Field-Work.

N.B.—Quickness and accuracy in Drawing, readiness and facility in practical operations, will be required from Candidates.

Subjects of Examination for Agricultural Scholarships of the First Year.

The English Language:
Grammar and Composition.

Mathematics:
Vulgar and Decimal Fractions, Involution and Evolution, Proportion and Interest.—Mensuration.

Geography:
Outlines of Modern Geography.

Book-keeping.

Subjects of Examination for Agricultural Scholarships of the Second Year.

Chemistry:
Laws of Combination and Affinity—Chemical History of the Constituents of Soils, Plants, and Manures, Chemical Problems, of the Nutrition of Plants and Animals.

Natural Philosophy:
Principles of Statics and Dynamics—Hydraulics and Pneumatics—Applications to the Theory of Farm Operations, Buildings, and Instruments.

Zoology and Botany:
Principles of Animal and Vegetable Physiology.

Theory of Agriculture:
Principles of Nutrition, and Growth of Cultivated Plants—Classification and Properties of Soils and Manures—Principles of the Rotation of Crops—Principles of the Rearing, Fattening, and Management of Farm Stock.

Subjects of Examination for Medical Scholarships of the First Year.

The Scholarships of the First Year in the Faculty of Medicine will be awarded thus:—One to the Candidate who shall have most distinguished himself at the Examination in the course prescribed for Science Scholarships of the First Year in Arts, and One to the Candidate who shall have most distinguished himself at the Examination in the course prescribed for Literary Scholarships of the First Year in Arts. Candidates for these Scholarships shall have previously declared themselves, and have Matriculated, as Medical Students. It is left to their option for which of them they will compete.

Subjects of Examination for Medical Scholarships of the Second Year.

Anatomy and Physiology.	General Physics.
Chemistry.	Zoology and Botany.

The French Language.

Subjects of Examination for Medical Scholarships of the Third Year.

Anatomy and Physiology.	Materia Medica.
Practical Anatomy.	Practical Chemistry.

Examination for Law Scholarship by the Professor of Jurisprudence.

First Year:
Reddie's Inquiries in the Science of Law.
Lord Bacon's Tract on Universal Justice, by D. C. Heron.
Adam Smith's Wealth of Nations—Book III.

Second Year:
Gardiner's Survey of the Roman Law, with the Lectures of the Professor for the 1st Year.

Third Year:
The Institutes of Justinian—Bowyer's Commentaries on Modern Civil Law.

Fourth Year:
Hallam's Constitutional History.

The Lectures to the Law Students are delivered in the Months of December, February, and March. Twenty-four Lectures in each course of the first two years, and Twelve in that of the 4th year, by the Professor of Jurisprudence.

Senior Scholarships.

The seven Senior Scholarships appropriated to the Faculty of Arts will be conferred, by examination, on the most distinguished Students who shall have proceeded to the Degree of A.B. in the Queen's University, for Proficiency in Special Departments of Study, viz. :—One Scholarship in the Greek and Latin Languages, and Ancient History; One in Modern Languages, and Modern History; One in Mathematics; One in Natural Philosophy; One in Metaphysics and Economical Science; One in Chemistry; and One in Natural History.

The two Senior Scholarships appropriated to the Faculty of Medicine will be awarded by examination to the most distinguished Students who shall have completed in some one of the Queen's Colleges the Course of Study of the first, second, and third Years, prescribed to Candidates for the Degree of M.D. in the Queen's University, for proficiency in Special Departments of Study, viz. :—One Scholarship in Anatomy and Physiology; and One in Therapeutics and Pathology.

The Senior Law Scholarship will be awarded to the most distinguished Student, who shall have proceeded in the Course of Arts to the A.B. and who shall have completed the Course of Legal Study prescribed to candidates for the Degree of LL.B.

Subjects of Examination.

For the Senior Scholarship in the Greek and Latin Languages, and Ancient History.

The Greek Language :
- Plato—Apologia and Crito.
- Thucydides—Book I.
- Herodotus—Book I.
- Aristotle—Selections from the Ethics.
- Plato—Gorgias.
- Aristophanes—The Frogs.
- Sophocles—Œdipus Coloneus.
- Homer—Iliad, Books XX. to XXIV. inclusive.
- Odyssey, Books XII. to XVIII. inclusive.
- Euripides—Medea, Alcestis, and Orestes.
- Composition in Attic Prose and Iambic Verse.

The Latin Language :
- Virgil.
- Horace.
- Lucretius—Books V. and VI.
- Juvenal—Satires, I. III. X. XIV.
- Persius.
- Plautus—Capteivei and Trinummus.
- Terence—Phormio and Andria.
- Cicero—De Oratore.
  Tusculan Disputations.
  Ad Atticum, Books III. and IV.
  Actiones Verrinæ.
- Livy—Books XXI. and XXIII.
- Tacitus—The Histories.
- Composition in Prose and Verse.

For Senior Scholarship in Modern Languages and History.

The French Language :
- Corneille—Le Cid.
- Mignet—Histoire de la Revolution Française.
  Historie de la Littérature Française, per Barthe on Nisard.

The German Language :
- Menzel's Geschicte det Deutschen.
- National Literatur Von A. F. Vilmar.
- Schiller's Maria Stuart.
- Göthe's Ephigeme.

The Italian Language :
- Tasso—Gerusalemme Liberata—First Five Cantos.
- Dante's Inferno—Italian Literature, published by Messrs. Chambers.

For the Senior Scholarship in Mathematics.

The subjects of previous Examinations (for which see pages 12 and 13,) with the following additions, viz. :—

Analytical Geometry of three Dimensions—
Linear Differential Equations with constant co-efficients. The easier forms of Non-Linear Equations.
Definite Integrals dependent upon the function Γ.

Newton's Principia—First three sections.
Analytical investigation of the Problem of two Bodies.

For the Senior Scholarship in Natural Philosophy.

Duhamel—Mécanique, Volume I.
Brinkley—Elements of Astronomy, including the Appendix.
Lloyd—Treatise on Light and Vision.

For the Senior Scholarship in Metaphysics and Economical Science.

The subjects discussed in the Lectures of the Professors, with the following additions:—

Metaphysics:
Herschel—Discourse on the Study of Natural Philosophy, part II. chap 6 and 7.
Mill—System of Logic, Book III. to the end of Volume I.

Jurisprudence and Political Economy.

For Students in Arts of the Third Year.

Jurisprudence—Nature of the Subject and some of its Elementary Principles; with a sketch of the leading changes in the law from the Conquest to the present period, and notice of the measures for law reform which are now proposed.

Political Economy:
The value and distribution of wealth, the principles which regulate the amount of Rent, Profits, and Wages.
The Principles of Commerce, and of Taxation, of Currency and Banking.

Text Books:
Adam Smith—Wealth of Nations.
Senior—Political Economy.
Longfield—Political Economy.
Longfield—Lectures on Commerce.
Huskisson—"Question stated."
Reddie—Inquiries on Science of Law.
Lord Bacon—Tract on Universal Justice, by D. C. Heron.

The course consists of twenty-four lectures delivered in the months of December, February, and March; the Students are required in the intervals to prepare the subjects which will be pointed out by the Professor.

For the Senior Scholarship in Chemistry.

Stœchiometry, and the general doctrines of Thoretical Chemistry:
The Laws of Combination—Atomic Theory—Relation between the Atomic weight and volume of Bodies.
Relation between the external form and Chemical constitution of Bodies—Isomorphism, Dimorphism, Amorphism, Allotropy, Isomerism, Polymerism, Metamerism.
Atomic constitution of Compounds—Theories of Acids and Salts.
Determination of the equivalents of Bodies—Stœchiometrical calculations.

Inorganic Chemistry:
Preparation and properties of the Chief Metallic and Non-Metallic Subtances and their Compounds.
Metallurgy of Iron, Zinc, Lead, Copper, Tin, Mercury, Gold, Silver.

Organic Chemistry:
Principles of Organic Analysis—Determination of the formulæ of Organic Compounds—Theories of Compound Radicals and Types—Doctrine of Substitution, Homologous Series, Conjugated Compounds.
Preparation and Properties of the Compounds of the Radicals, Cyanogen, Ferrocyanogen, Methyle, Formyle, Acetyle, Amyle.

For the Senior Scholarship in Natural History.

Zoology:
Agassiz and Gould's Zoology (*American Edition*)—General Homologies of the vertebral skeleton—Phenomena of the so-called Alterations of Generation.

Botany:
Physiology and Morphology—Jussieu's Classification as modified in Balfour's Text Book.

Physical Geography:
Hughes' Outlines of Physical Geography—Ethnology—Distribution and Characteristics of the various Races of Men.

For the Senior Scholarship in Anatomy and Physiology.

All branches of Anatomy and Physiology.

N.B.—Students will be expected to make Dissections, and give explanations of the parts dissected.

For the Senior Scholarship in Therapeutics and Pathology.

The general Actions of Drugs in health and disease, with their special applications and mode of administration.

Pathology, general and special.

Morbid Anatomy.

For the Senior Scholarship in Law.

The Lectures of the Professors for the preceding years.
Sugden—Law of Vendors and Purchasers.
Furlong—Law of Landlord and Tenant.
Taylor—Treatise on the Law of Evidence.
Stephen—Treatise on the Principles of Pleading.

TABLE OF HOURS OF LECTURE.

* Each subsequent Course, £1. † The Clinical Course not included.

Fees Payable by non-Matriculated Students.

For each of the Sessional Courses, except *Logic, Metaphysics, Political Economy, and Jurisprudence, Anatomy and Physiology, Practical Anatomy* and *Practical Chemistry*, Non-Matriculated Students pay a College Fee of Five Shillings, and a Class Fee of Two Pounds; for each of the excepted Courses, and, in the Faculty of Medicine, for each second and subsequent Course they pay, along with the College Fee of Five Shillings, the same *Class Fee* as Matriculated Students.*

Analytical Chemistry.

The Chemical Laboratory is open daily, except on Saturdays, from 10 to 4 o'clock, under the superintendence of the Professor, for Students desirous of prosecuting an extended Course of Qualitative and Quantitative Analysis, and for the purpose of original investigation in connexion with the Arts, or in the higher departments of Scientific Chemistry. The fee, exclusive of the expense of materials and apparatus, is—

For a period of two months and a-half, five days a-week, .	£5	0	0
For the same period, four days a-week, ...	4	4	0
For the same period, three days a-week, ...	3	10	0
For one month, daily, ...	3	3	0

Programme of the Times and Subjects of the Scholarship Examinations for the Session of 1855–56.

Examination Days.	From 9 to 12 o'clock, Noon.	From 2 to 5 o'clock, P.M.
16 October, 1855.	Zoology and Botany. Physical Geography.	Natural Philosophy. Mineralogy and Geology.
17 October, 1855.	Modern Languages. Logic. Metaphysics. Theory of Agriculture.	English Language. English Literature. History. Chemistry.
18 October, 1855.	Greek. Surveying, &c. Political Economy. Jurisprudence. Civil Law.	Latin. Surveying, &c. English Law.

Outline of the Courses of Lectures delivered by the Professors of the Faculty of Arts.

Literary Division of the Faculty of Arts.—*Dean*, R. De Vericour, D. es. L.

In Greek and Latin the classification of the Students is irrespective of their Collegiate standing; those of the First and Second years being distributed between two classes according to their proficiency. There is also in each of these Departments an Extra Class, the attendance on which is voluntary, and which consists generally of those Students who propose to become Candidates for Degree of M.A. or Classical Honors in the Queen's University, or for appointments in the Civil Service of the East India Company.

Both the Extra and Ordinary Classes are open to Non-Matriculated Students, *i.e.*, to gentlemen who have not yet commenced their Undergraduate Course, or who do not intend to take *Degrees in Arts*.

The Greek Language—*Professor*, John Ryall, LL.D.

Junior Class, . Monday, Friday, 10–11; Wednesday, Thursday, 9–10, A.M.
Senior Class, . Monday, Friday, 9–10; Wednesday, 10–11, A.M.
Extra Class, . Tuesday, Thursday, 10–11, A.M.

Junior Class—Herodotus, Book II. Euripides, Medea.
Senior Class—Plato, Apology and Crito. Euripides, Orestes.
Extra Class—Plato, Gorgias. Pindar, Pythia.

* Hospital Attendance.—Clinical Lectures on Medicine and Surgery are delivered at the North and South Infirmaries, by the Physicians and Surgeons of those Institutions.—Fee for Twelve Months, £8 8*s.*; Fee for Six Months, £5. Practical Pharmacy at the same Infirmaries.—Fee for Three Months, £3. Clinical Midwifery at the Lying-in Hospital, with Practical Attendance upon Thirty Midwifery cases.—Fee for Six Months, £3 3*s.* Further information may be had from the Medical Officers at the Infirmaries.

Exercises in Prose and Verse, according to the proficiency of the Students. The Books employed are, "Arnold's Introduction to Greek Prose Composition," parts I. and II.; "Beatson's Progressive Exercises on the Composition of Greek Iambic Verse;" and "Humphreys' Exercitationes Iambicæ."

Fee payable by Matriculated Students for the Undergraduate Course, £2 10*s*.
Fee payable by Non-Matriculated Students for each Sessional Course, £2.

N.B.—The importance of the practice of translating from English into Greek, and of acquiring a knowledge of the Principles of Greek Versification, *before Matriculating*, is strongly urged.

THE LATIN LANGUAGE.—*Professor*, BUNNELL LEWIS, M.A.

Senior Class—Monday, 10, A.M., Wednesday, 9, A.M., Friday, 10, A.M.

Terence, Adelphi.
Tacitus, Histories, Book I.
Juvenal, Satires, I., III., VIII., X., XIII., XIV.

Junior Class—Monday, 9, A.M., Tuesday, 10, A.M., Wednesday, 10, A.M., Thursday, 10, A.M.

Cæsar, Books V. and VI.
Virgil, Georgics, Book II.

Exercises in both Classes chiefly from Arnold's Introductions to Latin Composition.

Fee for the whole Undergraduate Course, £2 10*s*.
Fee payable by Non-Matriculated Students for each Sessional Course, £2.

Extra Class—Tuesdays and Thursdays, 11, A.M.

Cicero, one of the Verrinæ Orationes. De Oratore, Book III.
Lucretius, Book V.

In this Class special attention is paid to original Latin Composition, and to translation from English Authors into Latin. Fee, £2.

MODERN HISTORY, ENGLISH LITERATURE, AND THE HISTORY OF THE ENGLISH LANGUAGE.—*Professor*, THE REV. C. F. DARLEY, A.M.

1st Term—Modern History, Monday, Wednesday, Friday, 3–4, P.M.
2nd Term—English Literature, Monday, Wednesday, Friday, 3–4, P.M.
The History of the English Language, Tuesday, Thursday, Saturday, 1–2, P.M.

Modern History:
The Course will include General History from the 5th to the 15th Century, inclusive.

English Literature:
The Course will include the History of English Literature, along with a Critical Examination of its Standard Works from the earliest period up to the present day.

The History of the English Language:
The Lectures in this Course will treat of the History of the English Language, and its relationship to the Anglo-Saxon along with its kindred tongues and dialects. In subservience to this arrangement the more remarkable stages through which the Anglo-Saxon passed into Semi-Saxon, the Semi-Saxon into Old English, and the Old English into Modern English, will be analyzed and explained Historically and Philologically.

Composition:
English Composition will, at stated periods, be required from the Student.

Fee payable by Matriculated Students for the Undergraduate Course, £2 10*s*.
Fee payable by Non-Matriculated Students for each Sessional Course, £2.

MODERN LANGUAGES.—*Professor*, R. DE VERICOUR, D. ES. L.

Senior French Class (Medical),	Mondays,	Wednesdays,	Fridays,	12–1, P.M.
Junior French Class (Arts),	Do.,	Do.,	Do.,	1–2, „
Italian Class,	Do.,	Do.,	Do.,	2–3, „
German Language,	Tuesdays and Fridays,			2–3, „

Senior French—Eloges des membres de l' Académie de Médecine, per Pariset. Extracts from Bichat, Andral, Lallemand. Weekly Lectures on the Grammar and Idioms.

Junior French—Bossuet's Oraisons Funèbres. Fables de Lafontaine, Racine's Athalie, Esther. Molière's Avare. Barthe's Histoire de la Littérature Française. Extracts from Villemain, Châteaubriand, and Lamartine. Weekly Lectures on the Grammar and Idioms.

Italian—Silvio Pellico. Tasso. Extracts from Macchiavelli, Guicciardini, Davila. Manzoni. Weekly Lectures.

German—Schiller's Thirty Years War. Göthe's Ballads and Egmont. Schiller's Wilhelm Tell. Weekly Lectures.

For the Senior Scholarship in Modern Languages and History.

The French Language:
Corneille—Le Cid.
Mignet—Histoire de la Revolution Française.
Histoire de la Littérature Française, par Barthe ou Nisard.

The German Language:
Menzel's Geschichte der Deutschen.
National Literatur Von A. F. Vilmar.
Schiller's Maria Stuart.
Göthe's Iphigenie.

The Italian Language:
Tasso—Gerusalemme Liberata—First Five Cantos.
Dante's Inferno—Italian Literature, published by Messrs. Chambers.

Special Course not required for a Degree.

CELTIC LANGUAGES.—*Professor*, OWEN CONNELLAN, ESQ.

Monday, Wednesday, Friday, 12–1, P.M.

Subject I.—The Celtic Family of Languages, and its existing derivations, the Erse or Gaelic, Manx, Welch, Armorican, and Hiberno-Celtic. The Ogham Alphabet. The Antient Literature of Ireland, viz.:—The earlier Bardic Compositions, the Ossianic Poems, and Fenian Legends; View of the Contemporaneous state of Society in Ireland.*

Subject II.—The Irish Language, as now extant, its Grammar, Vocabulary, and Dialects. In this part of the Course the Student will be taught to speak and write the language grammatically.

Fee for each Sessional Course, £2.

SCIENCE DIVISION OF THE FACULTY OF ARTS.—*Dean*, ROBERT HARKNESS, F.G.S., F.R.S.E.

MATHEMATICS.—*Professor*, G. BOOLE, LL.D.

Students in Mathematics will be divided into Two Classes, viz.—the Junior Class, consisting chiefly of Students of the First Year, and the Senior Class, consisting of Students of the Second Year. Each or both of these Classes will, if necessary, be subdivided for the purpose of instruction according as may be deemed convenient.

Junior Mathematics,	Monday and Friday,	2–3, P.M.
	Tuesday and Thursday,	12–1, „
Senior Mathematics,	Monday and Friday,	12–1, „
	Tuesday and Thursday,	2–3, „
Senior and Junior Mathematics,	Saturday,	10–12, A.M.

Subject I.—Fractional and Decimal Arithmetic, the Elements of Euclid, with deductions from the propositions; Algebra, including the Theory and Solution of the Higher Equations; the Binomial and Exponential Theorems, &c. Plane and Spherical Trigonometry, with their principal applications to Mensuration, Geodesy, Astronomy, &c. The Elements of Solid Geometry, and the Conic Sections.

Subject II.—Analytical Geometry and the Conic Sections, the Differential and Integral Calculus, together with the subjects named in the previous Course, as far as recapitulation may be needed. The special object designed in these Lectures will be to prepare the Students for the pursuit of Mathematical Physics and Astronomy.

*** To the Students of the Senior Class, and to the more advanced Students of the Junior Class, weekly questions will be set, to which written answers will be expected.

N.B.—The above Classes are open to Students *before*, as well as after matriculation.

Fee payable by Matriculated Students for the Undergraduate Course, £2 10*s*.
Fee payable by Non-Matriculated Students for each Sessional Course, £2.

LOGIC AND METAPHYSICS.—*Professor*, GEORGE S. READ, M.A.

1st Term,	Logic,	Tuesday, Thursday, Saturday,	12–1, P.M.	
1st and 2nd Terms,	Metaphysics,	Do. Do. Do.,	1–2, „	

Logic—This Course consists of:—

I. Lectures, Examinations, and Exercises in Aldrich's Compendium of Logic, occupying the earlier part of the Term, &c.

II. A full discussion of Classification, the Theory of Hypothetical Syllogisms and of Induction, and the new Analytic of Logical Forms, as contained in the works of Mill, Whately, Thompson, and Baynes.

Throughout the Course the Students will be expected to familiarize themselves with the reduction of arguments to their strict Logical Form by written Exercises which will be examined by the Professor.

N.B.—Students who are proceeding to the degree of A.B., may attend at their option in the Third Year the Course of Lectures of the Professor of Metaphysics, or the Lectures of the Professor of Jurisprudence and Political Economy.

* The Lectures will be illustrated by reference to Irish MSS., and such Publications on Irish Historical and General Literature, as are at present accessible.

Metaphysics.—This Course will embrace:—

I. The Philosophy of the inductive Sciences illustrated by reference to Lord Bacon, Sir J. Herschel, Whewell, and Mill; and—

II. The History of Mental Philosophy, comprising—

1. The origin, progress, and development of Modern Philosophy anterior to the rise of the Scottish Schools.
2. A critical examination of the works of the more celebrated writers of that School.
3. A brief review of the present state of Philosophy in the British Islands, and on the Continent.

The Students will be expected to compose and submit, for Examination by the Professor, short Essays on the leading topics discussed during the Course.

JURISPRUDENCE AND POLITICAL ECONOMY.—*Professor*, RICHARD HORNER MILLS, A.M.

Tuesday, Wednesday, Thursday, Friday, 11–12, A.M.

Jurisprudence:

The Lectures on Jurisprudence will embrace an investigation of the doctrines of Natural Law and of utility, and of the principles on which the Civil and Penal Law are based.

Political Economy:

The Lectures on Political Economy will treat of the nature of value; the influence on price of the cost of production; the origin of rent, its effect on price, and the circumstances which measure and determine its amount; the doctrines of profits and of wages, with an examination of the effect on the condition of the labourer of the introduction of machinery, absenteeism, high rate of profit, and other circumstances which determine the rate of wages in a country; the incidence of taxation generally, and the relative advantages of direct and indirect taxation; the effects and operation of the funding system, with an examination of the true principles of Commerce, and a notice of the old Agricultural and Mercantile systems.

CHEMISTRY.—*Professor*, JOHN BLYTH, M.D.

Monday, Wednesday, and Friday, 11–12, A.M.

The Course is divided into Inorganic and Organic Chemistry.

In the first part are discussed the Laws of Combination and Affinity, Molecular Chemistry and Crystallography, and the history of the Non-Metallic and Metallic substances.

In the Organic portion of the Course will be considered the subjects of Organic Analysis, Organic Series, Compound Radicals and Types. Metamorphosis of Organic Bodies, History of special Animal and Vegetable Bodies.

In treating of the Laws of Chemistry, and the History of Inorganic and Organic bodies, those points will be chiefly dwelt upon which have a practical bearing in the Arts, Medicine, Engineering, and Agriculture. Thence, during the Course, attention will be directed to the application of Chemistry to Medicine and Physiology, to Metallurgic Operations, Chemical Manufacture, Building Materials, Soils, Manures.

Fee—For each Sessional Course, £2. Each subsequent Course in Medicine, £1.

Analytical Chemistry: see *ante*, page 25.

NATURAL PHILOSOPHY.—*Professor*, G. F. SHAW, F.T.C.D.

Experimental Physics:

Course attended by Arts Students of the third year, Engineering Students of the second year, Agricultural Students of the first year, and by Medical and by Non-Matriculated Students. Mondays, Wednesdays, and Fridays, from 2 to 3, P.M.

Text Books—Galbraith and Haughton's Treatises on Mechanics, Hydrostatics, &c. Chambers' Natural Philosophy.

Mathematical Physics:

Optional Course for Arts Students of the third year. Tuesday, Thursday, and Saturday, from 11 to 12, A.M.

Text Books—Duhamel's *Mecanique*, Vol. I., omitting Attractions, and Vol. II. *Central Forces*. Lloyd's Light and Vision, Part I., omitting Chapters IV. and VII., Part II., Chapters I. and II. Brinkley's *Astronomy*.

Engineering Physics:

Special Course for Engineering Students of the second year, Tuesdays, Thursdays, and Saturdays, from Noon to 1, P.M.

Text Books—Delauney's *Mecanique*. Tate's *Exercises in Mechanics*. Weale's Rudimentary Treatises on Warming and Ventilation, on Steam Boilers, on Lightning Conductors, &c. Lardner's *Electric Telegraph*. Selections from the works of Moseley, Willis, De Pambour, Peclet, Weisbach, &c.

Senior Mathematical Class (For Candidate Masters):—Monday, Wednesday, Friday, from 11 to 12.

Text Books—Duhamel's *Mecanique*, complete. Pratt's *Mechanical Philosophy*—Chapters IV. and V. Brinkley's *Astronomy*. Lloyd's *Light and Vision*. Murphy's *Electricity*, Chapter IV. Dixon's *Galvanic Circuits*. Selections from Dixon's *Heat*, and Pouillet's *Physique*.

Senior Experimental Class:

Text Books—Dixon's Heat. Pouillet's Physique. Noads and de La Rive's Electricity, &c.

NATURAL HISTORY.—*Professor*, WILLIAM SMITH, F.L.S.

Zoology:

General Outline of the Animal Kingdom. Histological examination of Animal structure; Organographical and Comparative History of the Functions of Nutrition, Relation and Reproduction; Sketch of the Classes, Orders, and Families of Animals with a special examination of one or more, particularly in reference to the British Fauna.

Botany:

General Outline of the Vegetable Kingdom. Histology of the Plant; Organography; Functions of vegetation; Morphology, and Phyllotaxis; Principles of Classification; History of the Principal Natural Orders, especially those of Economical and Medical Importance; Herborizations and application of the course to our native Flora.

Physical Geography (Faculty of Arts):

Description of the Earth and Atmosphere, as connected with the Biological History of the Globe; Distribution of Plants as affected by Physical Considerations, and of Food Plants, as influenced by the wants or tastes of civilized man; Distribution of Animals as dependent upon climate or domestication; Outlines of Ethnography.

GEOLOGY AND MINERALOGY.—*Professor*, ROBERT HARKNESS, F.R.S.E., F.G.S.

Monday, Wednesday, and Friday, 1, P.M.

General structure of the Earth; the causes at present in operation which modify its surface; Nature of Rocks which enter into the composition of the crust of the globe; description and classification of Sedimentary Deposits; Organic remains; Physical Geography of the Earth during the several geological epochs; characters and nature of Igneous, Plutonic and Metamorphic Rocks; Mineral Veins—their contents and mode of occurrence; application of Geology to Engineering, Mining, Agriculture, and Land Improvement.

Forms, Structure, Physical and Chemical characters of Minerals; description of the most important simple minerals—circumstances and conditions under which they are found.

CIVIL ENGINEERING.—*Professor*, JOHN ENGLAND, A.M.

Junior Class.—Monday, Wednesday, and Friday, 9–10, A.M.

Subjects—Surveying, Levelling, general theory and application of various constructions of Levels, Theodolites, Sextants, and the Instruments required for Engineering Field-Work.

Drawing.—Descriptive Geometry, Projection, Orthographic and Isomeric Plottings of Plans and Sections, Bridge Drawing.

Senior Class.—Tuesday, Thursday, and Saturday, 9–10, A.M.

Subjects.—Engineering Field-Work, setting out of centre lines, curves, half widths, &c. Nature and mode of application of Materials in construction, Practice of Road Making, Cutting, Embanking, Bridge Building, Tunnelling, Preparation of Mortars and Cements, Hydraulic Engineering, Preparation of Specifications, Estimates, &c.

Drawing.—A more extended course—Application to details of Construction and Machinery—Measurement of Work from Drawings.

The Drawing Office is open to Students Daily.

Practical Instruction in the Field in the uses of Surveying Instruments will be given during the Session.

Fee for each Sessional Course in Surveying and Engineering, &c., .	£2	0	0
Drawing, ...	1	10	0

AGRICULTURE.—*Professor*, EDMUND MURPHY, A.B.

Subjects of Examination for the Agricultural Scholarship of the Second Year.

Theory of Agriculture.—The Organs, Nutritions, Growth and Products of Agricultural Plants. Constituents of Plants, of Soils, and Manures. Formation and Classification of Soils. Meteorology in relation to Agriculture.

Subjects of the Sessional Examination in Agriculture at the end of Second Session.

Practice of Agriculture.—Agricultural Implements and Machines. On sheltering, Fencing, Draining, and Deepening Land. Culture of Farm Crops. Rearing and general management of Farm Stock. Construction of Farm Buildings. Reclamation and Irrigation of Land, Valuation of Land and Farm Finance.

Text Books in the Theory of Agriculture.—Henfy's Structural and Physiological Botany. Johnston's Lectures on Agricultural Chemistry and Geology.

In the Practice of Agriculture.—Stephens' Book of the Farm and Morton's Encyclopedia.

Subjects of Examination in the History and Diseases of Farm Animals.

Animal Physiology in reference to Farm Animals. The Natural History of Farm Animals, their diseases, with their remedies.

RESIDENCES.

There is no accommodation for the Residence of Students within the College, but it is provided by the Statutes that every Matriculated Student being under the age of Twenty-one Years, shall reside, during the College Terms, with his parent or guardian, or with some relation or friend to whose care he shall have been committed by his parent or guardian, or in one of the under-named Boarding-houses, licensed by the President of the College, and arranged for the reception of Students, who are there placed under the moral care and spiritual charge of the Deans of Residence of their respective creeds.

The terms for Board and Lodging are generally at the rate of from £30 to £40 a-year.

DEANS OF RESIDENCES.

Church of England,	Rev. Louis Perrin.	*Presbyterian Church*,	Rev. William Magill.
Roman Catholic Church,	Rev. Wm. O'Connor.	*Wesleyan Communion*,	Rev. P. Appelbe.

LICENSED BOARDING HOUSES.

Mr. Jeremiah Morony's,	9, King-street.	Mr. John O'Sullivan's,	52, South-mall.
Mrs. Jane Heron's,	14, Hardwick-street.	Mr. Edward Duke's,	54, Duncan-street.
Mrs. John Martin's,	12, North-mall.	Mrs. O'Regan's,	Sunday's Well.

For terms, &c., application is to be made to the different proprietors.

N.B.—Letters from persons desiring further information, to be addressed to the Registrar.

By order of the President,

Signed, ROBERT JOHN KENNY, Registrar

APPENDIX B.

The distribution of prizes, awarded at the last examinations to the successful students of the Queen's College, Cork, took place in the splendid hall in which the examinations are conducted. The hall was crowded to its utmost capacity, and a large portion of those in attendance were ladies. The students, in their academical costumes, occupied the seats in front of the dais; and places, immediately opposite the seats arranged for the College authorities, were reserved for the Corporation. When the President and College authorities, in their various collegiate robes, and the members of the Corporation in their official costumes, and the public generally, had all assembled, the effect was certainly very imposing. Shortly after one o'clock, his Worship the Mayor, accompanied by his Secretary, and attended by the other corporation officials, entered the hall, and was followed by the members of the Town Council. Amongst the members of the Corporation were—Alderman M'Namara; Sir John Gordon, T.C.; John Shea, T.C.; Dr. Wycherley, T.C.; C. Moynehan, T.C.; Alderman Scott; G. O'Neill, T.C.; D. O Flynn, T.C.; P. O'Connell, T.C.; and Mr. Daniel Meagher, the City Treasurer. On the entrance of the President, the great body of the students stood up and cheered enthusiastically. The President, Sir Robert Kane, and the Vice-President, Dr. Ryall, were accompanied by the Right Reverend Bishop of Cork, Cloyne, and Ross; the Right Hon. Lord Fermoy, Lord Lieutenant of the County; Archdeacon Kyle, Sir William Lyons, City High Sheriff, and William Fagan, M.P. Those gentlemen, together with the Mayor, occupied seats on the platform, on the right of which the several Deans of Faculty and Professors were accommodated, and among whom were—

Professors O'Connor, Bullen, De Vericour, Boole, Murphy, Lewis, Corbett, Smith, Fleming, Harkness, Connellan, Jack, and Read. In other portions of the building we noticed—Sir Thomas Tobin, Sir John Benson, Francis Jennings, James Cleary, Dr. Barry Delany, Dr. Shinkwin, Dr. Cremin, R. Victor Roche, Kiluntan; Dr. Wall, Dr. Armstrong, Colonel Hadden, Engineers; Dr. Jackson, Medical Staff; C. J. Fox, County Inspector, East Riding; J. M'Mullen, Dr. M'Carthy, Nicholas Peterson, Dr. Power, Lunatic Asylum; Dr. N. Hobart, Major Hobart, Dr. Beamish, William Drew, J.P.; William Barry, Rev. Dr. Neligan, Rev. W. Jones, Rev. Mr. Reeves, H. Orpen, Blackrock; Stephen Barry, Henry Unkles, E. M'Carthy, Dr. Finn, Counsellor Scannell, Barcroft Carroll, &c.

The prizes were then conferred by the President on the different students, as set forth in the following return, each student, on receiving his prize, being loudly cheered by his fellow-students:—

Faculty of Arts.

Third Year's Arts.

English Literature and History.—Bernard C. Davidson, A.B., 1st; Thomas Wall, A.B., 2nd.

Metaphysics.—Bernard C. Davidson, A.B., 1st.

Political Economy.—William O'Connor, Thomas Wall, A.B., equal, 2nd.

Natural Philosophy.—William O'Connor, 1st.

Physical Geography.—William O'Connor, 1st.

Mathematical Physics.—William O'Connor, 1st.

Second Year's Arts.

Greek.—John T. Clarke, William Starkie, equal, 2nd.

Latin.—William Starkie.

Logic.—Michael Gould, 1st.

Mathematics.—Michael Gould, 1st; Charles W. Townsend, 2nd.

Chemistry.—Michael Gould, 1st; Bernard Mason, 2nd; Michael Breen, 3rd; Thomas Heazle, 4th.

Zoology and Botany.—Michael Gould, 1st; William Lombard, 2nd; William Starkie and Michael Breen, 3rd.

First Year's Arts.

Greek.—Robert Fuller, 1st (Senior Division); James Egan, 1st (Junior Division).

English.—Thomas Allen, 1st; James Goold, 2nd; Thomas Moriarty, 2nd.

Mathematics.—James Goold, 1st; John T. Lacy, 2nd.

Department of Engineering.

Second Year.

Engineering—Richard H. Donnelly, 1st, India Railway.

First Year.

Geology and Mineralogy.—F. B. Walker, 2nd.

Engineering.—William Cox, 1st; F. B. Walker, 2nd.

Department of Agriculture.

Agriculture.—Ferdinand Beamish, 1st.

Faculty of Medicine.

Practice of Medicine.—William Roche, 1st, situation in Navy; William R. Rice, 2nd, do. do. India.

Surgery.—Denis B. O'Flynn, 1st; Arthur H. Orpen, 2nd.

Midwifery.—Arthur H. Orpen, 1st; Denis B. O'Flynn, 2nd.

Anatomy and Physiology.—William Busteed, 1st; Francis Luther, 2nd.

Practical Anatomy.—Edmond M'Carthy, 1st, Surgeon in Navy; William Busteed, 2nd; Denis B. O'Flynn, 3rd.

Materia Medica.—William Busteed, 1st; Edward J. Palmer, 2nd.

Anatomy and Physiology.—Jeremiah Dowling, 1st; Bernard Mason, 2nd; Michael Breen, 3rd.

Practical Anatomy.—William Roche, 1st.

Practical Chemistry.—James Land, 1st; William Busteed, 2nd.

Medical Jurisprudence.—William R. Rice, 1st.

Natural Philosophy.—Michael Breen, 1st; Bernard Mason, 2nd.

French.—Michael Rahilly; Richard Read.

When this ceremony had concluded, the President said:—

"Having distributed the prizes awarded by the Council of the College at the termination of the recent examination, the agreeable duty devolves upon me now of thus publicly noticing the successful results of the educational system carried out in this College, as exhibited in the instance of one of the students, who, within some weeks past, left this country for his official destination in India. I allude to Mr. Richard Wall, who formerly, up to last year, was a student of this College, at which period his collegiate studies, properly speaking, closed. Mr. Wall, by his good conduct, by his close attention to his studies, by

his almost uninterrupted success in obtaining collegiate honors and prizes, distinguished himself in the highest manner amongst his fellow-students. When Mr. Wall proceeded to Dublin to be examined for his degree of Bachelor of Arts, he took at that examination the highest possible place; he obtained the first place and the gold medal in the department of antient languages and literature; he obtained, also, the first place and gold medal in the department of modern languages. Subsequently, when Mr. Wall proceeded to Dublin, to be examined for his degree of Master of Arts, he preserved the prominent position he had previously taken, and he received a first-class place and gold medal, in languages and literature, on the conferring of his Master's Degree. Mr. Wall subsequently proceeded, as a candidate for the Indian Civil Service, to the examination which, in the middle of this year, was held in London; and Mr. Wall not only efficiently represented this College by passing that examination, but he was selected by the President of the Board of Control to be mentioned, along with two others, in the House of Commons, as the three gentlemen, one of whom was from Ireland, who especially deserved mentioning, for their distinguished answering. The College Council, moved by those considerations, and wishing to show to the students of this College, and to the public generally, the appreciation which they give to the efforts of students, have resolved to empower me to confer on Mr. Wall—who, although absent from us in body, is in spirit a participator of the ceremonial of to day—to confer on him the College Gold Medal, the first time it has been presented to any student, as a testimonial of how much they value the credit he has conferred upon the College. Mr. Wall is absent, having left for India; but I believe we are favoured to-day with the presence of one eminently able to represent him—Dr. Wall."

Dr. Wall, amid loud applause, came forward, and said:—"My Lords, Mr. President, Mr. Mayor, and Gentlemen, I am overpowered at the manner in which the name of my son has been received in this most respectable assemblage, and the mode in which this medal has been conferred by the President. I am almost sorry that my son is not here to witness it. I am sure he could never forget it—at least I never will; and I hope that his conduct, in the honourable discharge of his official duties, will yet be calculated to reflect credit on his Alma Mater."

After a short pause,

The President, amid loud applause, rose and read the address, which was heard with frequent interruptions from loud and long-continued applause, amid which the learned President resumed his seat.

The interesting proceedings then terminated, and the vast assemblage dispersed.

APPENDIX C.

No. 1.—Form of Circular from President.

Return to be filled up by the Professor of ———, and to be returned to the Registrar, so filled up, for the official information of the President, on or before the 12th inst., being for the Collegiate Session, 1855-56.

A.—As to the Course or Courses of Lectures given by the Professor: 1st. Duration and extent of the Course, number of Terms. 2nd. Number of weeks of Lectures in each Term. 3rd. Number of Lectures weekly, and days and hours of Lectures.

B.—The description or title of the Course or Courses of Lectures delivered, and a general abstract of the subjects of instruction, contained in the course, and the title of the text-books recommended.

C.—Whether the Lectures are illustrated by reference to maps, diagrams, specimens, or experiments, and a general notice of the kind of illustrations used.

D.—Whether any method of tutorial or other special instruction is employed, as by setting out portions of text-books for lessons, by themes, or exercises in composition, or problems; and whether special class examinations are held, and at what time; or whether herborization excursions or field exercises are given.

E.—What faculties or division of students are those attending Courses of Lectures of the Professors making the return.

F.—The number of students attending each course, distinguishing matriculated and non-matriculated students, and the general regularity of attendance.

G.—The general conduct of students at the Professor's Lectures, and the general state of discipline as regards the Professor's classes.

H.—The general condition of the department of which the Professor has charge, as to supplies, fitments, cleanliness, and accommodation for the purposes of instruction.

The Professor, in making the above returns, is requested to mark the answers with the letter designating the portion of the form of return, as above, to which each answer refers.

By order of the President,

Signed, Robert J. Kenny, Registrar.

December 6, 1856.

No. 2.—Report of Professor of Greek.

A.—1. The Course extends over three Terms. 2. In the first Term, seven weeks; in the second Term, nine weeks; in the third Term, nine weeks. 3. The Class of Greek consists of two divisions: the senior class being lectured on Mondays, Wednesdays, and Fridays, in each week; the junior division on the same days, and also on Thursdays—making seventy-five lectures to the senior division, and 100 lectures to the junior division; in all 175 lectures. There is also an extra voluntary Class, receiving two lectures in each week—making fifty lectures for the session.

B.—The authors read in the ordinary class were selected from the honor course for B.A. in the University. In the extra class, portions of Pindar, Plato, and, I think, of Aristotle, were read.

C.—The lectures are illustrated by reference to maps of the ancient world, hanging on the walls of the lecture-room.

D.—Portions of the authors read are prepared by the students, in the intervals between the lectures—the Professor examines them in these portions, and comments on them. These oral examinations are accompanied by exercises and compositions in prose and verse, and also by *written* translations of the authors.

E.—The students of the Faculty of Arts.

F.—Thirty-eight students, all matriculated. In the extra class, *three* students.

G.—The general conduct of the students at lecture has been unexceptionable, and their industry commendable.

H.—The fitments in the lecture-room are sufficient for the purposes of instruction, with one exception, which the Board of Works has undertaken to supply. The lecture-room itself was in a sufficient state of cleanliness. In the stairs and corridors an improvement in this respect would be desirable.

December 12, 1856. John Ryall.

No. 3.—Report of Professor of Latin.

A.—1. Three Terms. 2. First Term, nine weeks; second Term, nine weeks; third Term, seven weeks. 3. Junior class, four lectures weekly, Monday, nine, A.M.; Tuesday, ten, A.M.; Wednesday, ten, A.M.; Thursday, ten, A.M. Senior class, three lectures weekly, Monday, ten, A.M.; Wednesday, nine, A.M.; Friday, ten, A.M. Extra class, two lectures weekly, Tuesday, eleven, A.M.; Thursday, eleven, A.M.

B.—Latin language—Text-books of lectures. Junior class, Cæsar, Book V.; Virgil, Æneid, Book II. Senior class, Terence, Adelphi; Juvenal, Satires. Extra class, Cicero, De Oratore, Book III.; Lucretius, Book V. In the extra class, passages from English poets and prose writers were translated into Latin by the students.

C.—Large maps of Ancient Greece, Italy, and Asia Minor, hung on the walls of the lecture-room, are used for illustration of the lectures.

D.—The students are always expected to prepare a portion of the text-book for each lecture in which they are examined by *viva voce* questions. In the senior and junior classes Arnold's Introduction to Latin Verse and Prose Composition were used as exercise books. In the junior and senior classes the progress of the students was tested at the close of the session by Examination Papers, to which they returned answers in writing.

E.—Students in Arts.

F.—Junior, nineteen, all matriculated. Senior, twenty, all matriculated. Extra, five; matriculated, three; non-matriculated, two. The attendance was somewhat below the amount that might be fairly expected.

G.—On the whole satisfactory.

H.—Satisfactory.

Bunnell Lewis.

No. 4.—Report of Professor of English.

A.—History; from 29th October to 21st December, twenty-four lectures; one Term, eight weeks. History of the English language, commenced 10th January, ended 10th March; twenty-seven lectures; one Term, nine weeks. English literature, commenced 9th January, ended 5th March; number of lectures delivered, twenty-four; one Term, nine weeks. The number of lectures weekly on History—three each week: on Mondays, Wednesdays, and Fridays, at three, P.M. The number of lectures weekly on the History of the English language—three each week: on Tuesdays, Thursdays, and Saturdays, at one, P.M. The number of lectures weekly on English literature, three: on Mondays, Wednesdays, and Fridays, at three, P.M.

B.—Title of Courses—Modern History, English Literature, the History of the English Language, and Composition. Text books used—Chambers' English Literature, Spalding's History of English Literature, Craik's English Literature, Hallam's History of the Middle Ages, and Craik's History of the English Language.

C.—The lectures being purely literary were illustrated only by maps.

D.—With regard to special instruction portions of class-books were set apart for Session; themes and exercises in composition were given.

E.—Students in Arts, of the first and second years, are the only students attending the courses.

F.—In the History Course, six students; in the History of the English Language, thirty-three students; in the English Literature Course, six students; all matriculated students; the general character of the attendance being satisfactory.

G.—The general conduct of the students was such as met with the Professor's approval, and the state of discipline satisfactory.

H.—The general condition of the department as respects supplies, fitments, cleanliness, and accommodation, is satisfactory.

December 9, 1856. C. F. DARLEY.

No 5.—REPORT of PROFESSOR of MODERN LANGUAGES.

A.—1. Three courses of French; one of German. Senior French course, three terms. Junior French course, three terms. Second junior course, two terms. Course of German, two terms. 2. First term, eight weeks. Second term, nine weeks. Third term, ten weeks. 3. Senior French, three lectures a week; junior, three lectures a week; second junior, two lectures a week; German, two lectures a week.

B.—Lectures on the grammar and idioms, once a week; reading, translations, and exercises, and reading by the Professor, twice a week, or once a week. *French Text-books*—Mignet, Bossuet, Racine, La Fontaine, Chateaubriand, Lamartine, Barthe. *German Text-books*—Schiller, Goethe, Wilmar. *Italian*—Silvio Pellico, Tasso, Dante.

C.—Lectures not illustrated by maps, &c.

D.—Tutorial and Professorial methods blended. Text-books prepared and read: exercises. Lectures on grammar and on literature at the close of each Session.

E.—Faculty of Arts, thirty-five students; Faculty of Medicine, twenty-three.

F.—Senior French, twenty-three. Junior French, thirty-five. Second Junior French, nine. German, six.

G.—The general conduct of students was excellent.

H.—Condition of rooms, &c., very satisfactory.

December 10, 1856. R. DE VERICOUR.

No. 6.—REPORT of PROFESSOR of CELTIC.

A.—1. The courses of lectures in my department commence at the beginning of the second Term, and are continued to the end of the Session, being two Terms in each Session. 2. The Celtic Lectures are delivered in every week during the two Terms, except in those of the Easter recess, and the last week of the Session. 3. There are three lectures delivered each week. The days of lecturing are Mondays, Wednesdays, and Fridays, and the hours are from twelve to one o'clock on each of these days.

B.—1. The Course of Lectures comprises the Celtic Family of languages, and its existing derivatives, the Erse, or Gaelic of Scotland, Manx, Welch, Armorican, and Hiberno-Celtic, the Ogham alphabets still extant in several ancient Irish MSS., and the Ogham inscriptions discovered on stones in various parts of Ireland. The ancient literature of Ireland, viz., the earlier Bardic compositions, the Ossianic Poems and Fenian Legends, View of the Cotemporaneous State of Society in Ireland. The lectures are illustrated by extracts from Irish MSS., written between the ninth and fifteenth centuries. 2. The Irish language, as now extant, its grammar, vocabulary, and dialects. In this part of the course the student is taught (principally by written exercises) to speak and write the language grammatically, for the Irish people still speak it with grammatical purity. 3. The Text-books used and recommended are, Keating's History of Ireland, being the medium between the ancient and modern language; the Annals of the Four Masters, and the works published by the Irish Archæological, Celtic, Gaelic, and Ossianic Societies.

E.—The students attending my lectures are generally those of the Faculty of Arts, both of the Literary and Scientific Divisions. Their object chiefly was to acquire a knowledge of their native tongue, or otherwise for literary and philological purposes.

F.—There are no Scholarships attached to the Celtic chair, and an order was made in Council, in the Session 1854–55, regarding the distribution of prize-money, which had the practical effect of excluding the Celtic class from participating in the prizes, although the Celtic Professor should have been exempted from such a rule by reason of his having no Scholarships at his disposal. When the students became aware of this order, naturally construing it as a prohibition, they withdrew, and consequently I had no class during last Session. It is, however, hoped that the small grant of £5, lately made by the Council, although so very inadequate, will to some extent restore the confidence of pupils, and may lead to more encouraging results for the future, in carrying out the objects for which the Chair was originally instituted.

G.—With regard to the young gentlemen who attended my lectures I unhesitatingly assert that none could be more civil or better conducted in any rank of society.

H.—Cleanly and regular.

December 9, 1856. OWEN CONNELLAN.

No. 7.—Report of Professor of Logic and Metaphysics.

1.—*Logic.*

A.—1. One Term. 2. Ten. 3. Three. Tuesdays, Thursdays, and Saturdays, from two to three.

B.—Logic, deductive and inductive—Aldrich, Whately, Mill, &c.

C.—No illustration used except such as are drawn on the board at the time of lecture.

D.—Tutorial instruction is employed chiefly at the commencement of the Course. Class examinations are held.

E.—Second year's students in Arts, and Medical students for the Army and other Boards.

F.—Nine matriculated students. General attendance very regular.

G.—Conduct of the students in the class-rooms unexceptionable.

H.—There is no lecture-room at present provided for the class of Logic.

2.—*Metaphysics.*

A.—1. Two Terms. 2. First Term, eight; second Term, ten. 3. Lectures weekly, three. On Tuesdays, Thursdays, and Saturdays, from one to two.

B.—History of Philosophy and Psychology; History of Philosophy of the University of France—Morell, Hamilton, Reid, &c.

C.—None.

D.—Special class examinations are held.

E.—Third year students in Arts.

F.—Four matriculated students. General attendance very regular.

G.—Conduct of the students in the class-room unexceptionable.

H.—No lecture-room at present provided for the class of Metaphysics.

G. S. Read.

No. 8.—Report of Professor of Mathematics.

A.—Three terms. Weekly lectures, eight. Hours of lecture and tuition, 1, P.M., to 3, P.M., and on Saturday, 10, A.M. Number of lectures, about 180.

B.—Mathematics. Separate courses for first year's, for second year's, and for more advanced students. Text-books—Hind's Arithmetic; Hind's and Thomson's Algebra; Pott's Euclid; Solid Geometry of Chambers' Course; Thomson's Trigonometry; Puckle's Analytical Geometry; Gregory's Solid Geometry; Todhunter's Differential Calculus; Hymen's Differential Equations, &c.

C.—Illustrations by diagrams on black board; by apparatus as far as means existed.

D.—Tutorial instruction on Saturday morning. Problems generally given out at the close of each lecture. Special class examinations of greater extent occasionally. Portions of text-books specially recommended.

E.—Students in Arts and Engineering.

F.—I do not remember with sufficient accuracy.

G.—Conduct of students at lecture always good.

H.—Supplies and fitments defective. State of cleanliness not, in my opinion, such as it ought to have been. Accommodation insufficient for the larger classes; my lecture-room having been reduced to one-half of its original dimensions.

George Boole.

No. 9.—Report of Professor of Natural Philosophy.

A.—In the department of Natural Philosophy three courses of lectures were delivered during the Session 1855–56. 1. Each course continued for three Terms. 2. In the first Term lectures continued for seven weeks; second, eight weeks; third, seven weeks. 3. In each class three lectures were delivered in each week, viz.:—in first, on Tuesdays, Thursdays, Saturdays, eleven to twelve o'clock; second, on Tuesdays, Thursdays, Saturdays, one to two o'clock; third, Mondays, Wednesdays, Fridays, one to two o'clock.

B.—In first class, that of General Physics, the subjects of the course were—Mechanics, Hydrostatics, Optics, Astronomy, Heat, Magnetism, Electricity, and Electro-Magnetism. Text-books—Galbraith and Haughton's Manuals of Mechanics, Hydrostatics, Optics, and Astronomy; Pouillet Elemens de Physique; Golden Bird's Natural Philosophy. In second class, that of Mathematical Physics, the subjects of the course were—Mechanics, Optics, Astronomy. Text-books—Selections from Duhamel Cours de Mecanique; Lloyd's Treatise on Light and Vision; Brinkley's Astronomy. In third class, viz., that of Engineering Physics, the course embraced—Practical Mechanics, Theory of Machines, Theory of Steam Engine. Text-books—Tate's Exercises on Mechanics; Selections from Moseley's Mechanics; Dixon's Treatises on Heat; De Pambour's Theory of Steam Engine.

C.—The Course of General Physics was fully illustrated by experiments and diagrams.

D.—In the Courses of Mathematical and Engineering Physics, students were required to prepare portions of the text-books and problems proposed as exercises.

E.—The Course of General Physics was attended by students of third year in Arts, second year in Engineering, first year in Medicine, first year in Agriculture. The Course of Mathematical Physics was optional with students in Arts and Engineering. The Course of Engineering Physics was attended by Engineering Students of the second year.

F.—In class of General Physics—matriculated, thirty-six; non-matriculated, two. Attendance, regular. Class of Mathematical Physics—matriculated, three; non-matriculated, one. Attendance, not regular. Class of Engineering Physics—matriculated, seven; non-matriculated, none. Attendance, very regular.

G.—The general conduct and state of discipline of the students in all the classes was unexceptionable.

H.—Although the Physical Cabinet has received recently many useful additions, it still requires much, especially in the departments of Heat and Magnetism; the lecture-room some additional fitments, which are now being made by the Board of Public Works. Some inconvenience is felt from the dampness of the walls in the Physical Cabinet. The arrangements for the cleanliness of the department are perfectly satisfactory.

December 11, 1856. JOHN ENGLAND.

No. 10.—REPORT of PROFESSOR of CHEMISTRY.

A.—There are two courses of instructions in Chemistry: the first extended through three Terms, commencing on the 29th October, and terminating at the end of May. In the first Term were seven and a-half weeks; in the second, nine and a-half; in the third, seven and a-half. There were three lectures a-week, on Monday, Wednesday, and Friday, at 11, A.M. The second course extended through three months, the lectures being given four times a-week, on Monday and Wednesday, from two to three; or on Tuesday and Thursday, from three to four o'clock.

B.—The first is a systematic course of lectures on Chemistry, embracing the laws of Combination, the History of the Metallic and Non-metallic Substances, the Theories of Organic Chemistry, and the description of Organic Compounds. There is a course of Practical Chemistry, embracing instructions in Chemical Manipulation, in Analysis, and in testing from poisons. In addition to this practical class, the laboratory is open, under certain regulations, to other students who may be desirous of pursuing a more extended course of analysis. The text-books for the first course—the larger works on Chemistry, by Kane, Graham, and Regnault: and the smaller outlines, by Fownes and by Gregory. For the second course—Bowman's Practical Chemistry is used.

C.—The courses are abundantly illustrated by diagrams, drawings, specimens, and experiments.

D.—In the first or systematic course, the mode of instruction is by lectures; and immediately after each lecture, some time is spent in discussing and explaining difficulties that may have occurred to any student. In the second, or practical course, each student being supplied with apparatus and materials, works in the laboratory, under the immediate direction of the Professor.

E.—The systematic course is attended by students of the Faculties of Medicine and of Arts (including the Departments of Engineering and of Agriculture.) The second, or Practical Chemistry Course, is attended by students of the Faculty of Medicine chiefly, and sometimes by students of Engineering and of Agriculture.

F.—Fifty-three students attended the lectures, of whom forty-nine were matriculated, and four non-matriculated. Sixteen Medical Students attended the Practical Chemistry Class, twelve being matriculated, and four non-matriculated. In addition to these, there was, in the laboratory, a second class of Analytical Students, of whom two were matriculated, and one was non-matriculated. The total number of Practical Chemistry Students was, therefore, nineteen. Their attendance was regular.

G.—The general conduct of the students was very good, and the state of discipline excellent.

H.—The Chemical Department, by means of the yearly grant, is gradually acquiring a good collection of apparatus, and other appliances for instruction. In consequence of the number of students in Practical Chemistry having more than doubled since the opening of the College, the laboratory accommodation is at present quite inadequate; but this deficiency is about to be speedily removed by the Board of Works.

December 10, 1856. J. BLYTH, M.D.

No. 11.—REPORT of PROFESSOR of NATURAL HISTORY.

A.—1. Three Terms. 2. First Term, seven weeks; second Term, nine weeks; third Term, nine weeks. 3. Three. Monday, Wednesday, and Friday, from three to four, P.M.

B.—Zoology and Botany, including Animal and Vegetable Histology, Organography, Physiology, and Taxology. Text Books in Zoology—Carpenter's Manual of Physiology, Edward's Manual of Zoology, and Patterson's Introduction to Zoology. In Botany—Balfour's Outlines of Botany, Lindley's School Botany.

C.—The Lectures are illustrated by maps, diagrams, specimens, and microscopical demonstrations.

D.—Herborizations are given on Saturdays during the last term.

E.—Second year's students in Arts, first year's students in Medicine, and first year's students in Agriculture.

F.—Thirty-seven. Attendance, fair.

G.—Satisfactory.

H.—Tolerably well provided. Some improvement desirable.

December 6, 1856. WILLIAM SMITH.

No. 12.—Report of Professor of Geology and Mineralogy.

A.—The course of Lectures on Geology and Mineralogy commenced on the 24th October, 1855, and ended on the 21st May, 1856, and included the three Terms of the College Session. The first Term, during which the Lectures were given, embraced a period of eight weeks; and the second and third, the same period each. The number of Lectures delivered weekly was three, and the days Mondays, Wednesdays, and Fridays; the hours being from one to two, P.M.

B.—The course included sixty Lectures on Geology and Physical Geography connected therewith; also, the Palœontology of the several geological formations. About ten Lectures on Mineralogy, embracing the nature, characters, and uses of the more important and common minerals. The Text-books used were—Lyell's Manual, Page's Introductory Text-book, and Jukes' Physical Geology. In Mineralogy, Nicols' Manual.

C.—The Lectures were illustrated by maps, diagrams, and specimens.

D.—The mode of instruction is entirely devoted to Lectures, and during the latter portion of the course to Field Geology, on such days as do not interfere with other courses of Lectures delivered in the College.

E.—The students attending the Lectures on Geology and Mineralogy are exclusively confined to the engineering and agricultural divisions of the Faculty of Arts.

F.—The number of students attending the Course, Session 1855–56, was fifteen, all being matriculated students. Of these, with the exception of two, the character of the attendance was regular.

G.—The general conduct of the students, during Lectures, was such as to be entirely satisfactory; and the state of discipline of the class was of a nature which met with the approval of the Professor.

H.—As regards the general condition of the department of which the Professor of Geology and Mineralogy has charge, this, as respects supplies, fitments, cleanliness, and accommodation for the purposes of instruction, is in an efficient state.

December 8, 1856. Robert Harkness.

No. 13.—Report of Professor of Civil Engineering.

A.—Three Courses were delivered in the Session 1855–56, by the Professor of Engineering, viz. :—1. One Course of Lectures to the Senior Class in the Department of Engineering. 2. One Course of Lectures to the Senior Class of Science Department. 3. A Course of Instruction in Geometrical Drawing, to the Senior and Junior Classes together. Each Course continued throughout the three College Terms. The Lectures in the first Term continued through eight weeks; those in the second Term, through ten weeks; and those in the third Term, through seven weeks. The Lectures to the Junior Class were given on Mondays, Wednesdays, and Fridays, from nine till ten. Total No. of Lectures, seventy-two. The Lectures to the Senior Class were given on Tuesdays, Thursdays, and Saturdays, from nine till ten. Total No. of Lectures, sixty-nine. The instructions in Drawing were given every day in the Drawing Office, from ten till eleven, except when the Professor was absent in the field with either Class.

B.—Junior Class.—Subject of Lectures.—Use of Instruments, Surveying and Levelling, Orthographic and Iometric Projection, Descriptive Geometry and Perspective. Text-books, Simms, on Instruments, Heather, on Instruments, Simms, on Levelling, Williams' Geodesy, Hall's Descriptive Geometry, Pyne's Perspective. Senior Class.—Subject of Lectures.—Materials used in engineering works, foundations, principle of the construction of roads, railroads, canals, harbours, bridges, Hydraulic Engineering, and strength of materials. Portions of a great number of books in the Library are recommended to the Students.

C.—The Lectures to the Junior Class were illustrated by models, by the instruments with which the School of Engineering is supplied, and by Drawings.

D.—Each Class was occasionally examined in the subject of the preceding Lectures, and every Student is required to pass the examination in the subjects of the Lectures, held at the end of the Session. The Senior Class Students were engaged at field-work, during the early part of the second Term, and the Junior Class during the latter part of the second Term, and the whole of the third Term.

E.—The Students in the Departments of Engineering and Agriculture.

F.—Senior Class, seven; Junior Class—Engineering Students, fourteen; Junior Class, Agriculture, one—fifteen; Non-Matriculated Students in Engineering, two. Total, twenty-four. The attendance of the Students, with a few exceptions, was regular.

G.—The general conduct of the Students was very good.

H.—The Engineering School is supplied with a good set of Drawings and Instruments, and the Engineering Department of the Library with books. The accommodation and fitments, although sufficient last year, are not so during the present Session, on account of the increased number of Students; the Senior Class are now obliged to do their office work in the Professor's room. The rooms appropriated to the use of the Professor of Engineering are clean and suitable for the purpose of instruction.

Alexander Jack, M.A.

No 14.—Report of Professor of Agriculture.

A.—1. From the 21st October, 1855, to the 13th June, 1856—three Terms. 2. Seven weeks in the first, eleven in the second, and seven in the third Term. 3. Three Lectures to each of three Classes. On Tuesdays, Thursdays, and Saturdays, from ten to eleven, from twelve to one, from two to three.

B.—Theory of Agriculture (Junior Class).—Agricultural Geology—formation of soils. Agricultural Chemistry—constituents of soils, manures, and plants. Agricultural Physiology—vegetation, nutrition, and growth of plants. Agricultural Botany—classification and discriminating plants. Agricultural Meteorology—influence of light, temperature, and moisture, on vegetation. Agricultural Entomology—insects injurious to crops. Text-books.—Johnston's Lectures. Balfour's Botany. Boussingault's Rural Economy. Journal of the English Agricultural Society. Practice of Agriculture (Senior Class).—History of Agriculture. Agricultural Mechanics—implements and machines. Preparation of Land for Culture—fencing, draining, deepening land. Culture—details of the cultivation of each crop cultivated on the farm. Land Improvement—irrigation, reclaimation. Farm Architecture—situation and arrangement of farm offices. Principles of land valuation. Farm accounts and finance. Text-books.—Morton's Encyclopedia of Agriculture. Stephens' Book of the Farm. Low's Elements of Practical Agriculture, and Treatise on Land Improvement. Journal of the English Agricultural Society, and Transactions of the Highland Society, &c. History and Diseases of Farm Animals (Senior Class). Natural history of the domesticated animals. Comparative anatomy of the horse, ox, sheep, and swine. Digestion, circulation, nutrition, respiration. The breeding, rearing, feeding, and general management of the horse, horned cattle, sheep, and swine—their diseases and treatment. Insects injurious to farm animals. Text-books.—Youatt on the horse and ox. Spooner on the sheep. Morton's Veterinary Pharmacy, &c.

C.—Each of the above named subjects is illustrated with the necessary diagrams, schedules, and specimens. The Students perform experiments in Agricultural Chemistry, and in Vegetable Physiology.

D.—Portions of the text-books are selected and marked for the Students, and they are examined in these portions, besides which there is a class examination, when each subject is concluded. I take occasional excursions with the class, on which occasions field instructions are given.

E.—The Science division of the Faculty of Arts.

F.—In the junior class—five matriculated, and one non-matriculated. In the senior class—one matriculated, and one non-matriculated. The attendance of the junior class, with the exception of one student, excellent; attendance of the senior class, not regular.

G.—Excellent.

H.—In good order, and furnished, from time to time, with whatever I require for the theoretical teaching of my class. But no farm being attached to, or in connexion with the College, I am unable to afford my class the necessary instruction in practical farming. This want would be supplied were a hall, for the residence of students in Agriculture, of the College included in the plan of the school and farm offices, now about to be erected on the Model Farm, at Ballygaggin; and were an arrangement made by which the Professor of Agriculture might exercise some (defined) control over the farming operations there.

Edmund Murphy.

No. 15.—Report of Professor of Jurisprudence and Political Economy.

A.—Four Courses of Lectures, viz.—Jurisprudence and Political Economy for Arts Students—Jurisprudence for Law Students; Civil Law; and Constitutional Law.

Jurisprudence and Political Economy (*Arts*).—1. Twenty-four Lectures, two Terms. 2. Three. 3. Four—Tuesdays, Wednesdays, Thursdays, and Fridays.

Jurisprudence (*Law*).—1. Fifteen, two Terms. 2. In parts of three weeks of each Term. 3. Varied.

Note.—The prescribed number of Lectures for this Course is twenty-four; but, as I recollect, the cause of the fewer number having been delivered was because of the business having been gone over rapidly at the commencement, to accommodate one of the students, Mr. Daly, who was obliged to discontinue at an early period, and the other students not continuing after he had attended a sufficient number to save his year.

Civil Law.—Six.

The prescribed number of Lectures is Twenty-four, but the only student, scholar of second year, discontinued (and left the College, as I believe), having attended but six.

Constitutional Law.—1. Ten Lectures, two Terms. (The Course consists of twelve Lectures, but the only student was absent twice). 2. Parts of three weeks in the second, and of one in the vacation, and of two weeks in the third Term. 3. Varied.

B.—*Jurisprudence and Political Economy.*—Jurisprudence.—Nature of the subject, and some of its elementary principles, with a sketch of some of the leading changes in the Law, from the Conquest to the present period. Political Economy.—The nature and distribution of wealth; the principles which regulate rents, profits, and wages; the principles of commerce; of taxation; of the trading system; of currency and banking.—Adam Smith—Wealth of Nations. Senior—Political Economy. Longfield—Political Economy. Longfield—Lectures on Commerce. Huskisson—"The Question Stated." Reddie—Inquiries on Science of Law. Lord Bacon—Tract on Universal Justice, by D. C. Heron. John Stuart Mill—Political Economy.

Civil Law.—Text-books: Gardner's Survey of the Roman Law; The Institutes of Justinian; Bowyer's Commentaries on Modern Civil Law.

Constitutional Law.—Hallam's Constitutional History.

C.—None.

D.—In Jurisprudence, from the scarcity of text-books, there is little or no tutorial instruction. In Political Economy, the Course is commenced with examinations in prescribed portions of the text-books; the continuance of this mode of instruction depends on the attainments and capabilities of the class. In Civil and Constitutional Law the Lectures consist almost wholly in examinations on the prescribed text-books. The Classes are also, for the most part, required to prepare certain portions of the text-books, in the intervals previous to the commencement, and between the several portions of the Course.

E.—Jurisprudence and Political Economy—Third year's Arts. Jurisprudence—First year's Law. Civil Law—Second year's Law. Constitutional Law—Third year's Law.

F.—Jurisprudence and Political Economy, four matriculated. Jurisprudence (Law) two matriculated. Civil Law, one matriculated. Constitutional Law, one matriculated.

G.—Most creditable.

H.—I have never been able to occupy the Lecture-room appointed to me, because of there being no stove or other mode of heating the apartment.

R. H. Mills.

No. 16.—Report of Professor of English Law.

A.—There were four classes. The Course for each class consisted of twenty-four Lectures. Twelve were given to each class during the first term; eight during the second; and four during the third. They occupied three weeks in the first, two in the second, and one in the third Term—four Lectures having been given weekly, on Tuesday, Wednesday, Thursday, and Friday, at the hours of 9, A.M., 11, A.M., 12, and 3, P.M.

B.—The title of the Course for the class of the first year was, "The Law of Real Property." It comprised elementary instruction in this branch of law, and in practical conveyancing. The text-book read was, "Williams on Real Property." The first volume of Stephens' edition of Blackstone's Commentaries was recommended for perusal. The title of the Course for the class of the second year was, "The Law of Personal Property," "Equity," and "Bankruptcy." It comprised instruction in those branches, and in the practical application of precedents of pleading in Equity, &c. The text-books read were, "Williams on Personal Property," "Smith's Manual of Equity," "Clements on Bankruptcy." The second volume of Stephens was recommended for perusal. The title of the Course for the class of the third year was, "Common and Criminal Law." It comprised the constitution and jurisdiction of the several Courts of Justice; their mode of procedure in Crown and Civil suits, &c., and practical instruction in forms of pleadings, &c. The text-books read were, the third and fourth volumes of Stephens' edition of Blackstone; Broom's "Common Law and Maxims;" and Smith's Leading Cases were recommended for perusal. The title of the Course for the class of the fourth year was, "The Law of Evidence and Pleading." It comprised a summary of all the subjects of the previous years, and instruction in the higher and more abstruse subjects of legal learning. Taylor on Evidence, Co. Litt.'s Reports of cases, &c., were read.

C. and D.—The Lectures were elucidated by the perusal of Abstracts of Title, and (so far as it was possible) by the consideration of cases for opinions, and by requiring the students to write on the subject of them; to prepare drafts of deeds, and forms, &c.

E.—Students in the Faculty of Law.

F.—Four in the class of the first year; one in the second; one in the third; one in the fourth. It is to be observed, that students generally do not enter the Law Class until they have proceeded far, and are about to take their degree, after which they do not return to the College. Some members of the class obtained official appointments, as in the case of Mr. Daly, &c., and did not, in consequence, continue their studies in this College.

G.—Invariably good.

H.—I respectfully submit that a room in the College ought to be appropriated for the use of students in the Faculty of Law; for want of one they are, at present, exposed to inconvenience and frequent interruption.

Michael Barry.

In addition to the Lectures in the Faculty of Law, I have delivered the legal portion of the Lectures in Medical Jurisprudence—twelve in number. For the answers in reference to this Course, I take leave to refer the President to the report of my colleague, Dr. Blyth, with whom I have co operated, pursuant to the order of Council.

December 12, 1856. Michael Barry.

No. 17.—Report of Professor of Anatomy and Physiology.

A.—Two Courses. 1. The two Courses consist of 240 lectures—viz., 120 lectures in each Course—and extend over two Terms; the first being before, and the second after the Christmas recess. 2. Seven and a-half weeks in the first Term; sixteen weeks in second Term. 3. Ten lectures in each week during the Medical Session, delivered from twelve to one, and from one to two o'clock, P.M., daily, except on Saturday. In addition to the lectures at the above-mentioned hours, the Professor delivers a distinct Course on the Anatomy and Physiology of the Eye, Ear, and other Organs of the Senses; and also a special course of demonstrations and lectures on Surgical Anatomy. These special lectures

have been delivered chiefly during the second Term, at hours convenient to the students, and approved of by the President and Council.

B.—One Course is entitled "Anatomy and Physiology;" the other Course, "Practical and Descriptive Anatomy;" which last includes the regular lectures and demonstrations given in the theatre, and also the Courses of Dissections. During the performance of their dissections, which extend over several hours daily, the students are assisted by explanations and demonstrations afforded to them by the Professor of Anatomy, and by his assistant, Dr. Shinkwin, the Demonstrator. The dissections commence in October, and usually continue till the middle of May. The Course of Anatomy and Physiology comprehends the following subjects:—1. Nature of life and organization; general description of the vital functions; general and special descriptions of all the tissues of the human frame; the structure and composition of all the solids and fluids—viz., the blood, the chyle, bile, saliva, &c. This portion of the course includes microscopic anatomy. 2. Physiological Anatomy of the organs of support and locomotion, circulation, respiration, digestion, secretion, excretion, absorption, reproduction; the brain and its membranes; the spinal cord and its membranes; the ganglia and nerves; the organs of the senses—of touch, taste, vision, hearing, smell; organ of voice, &c. 3. The course comprehends all departments of human physiology, which are constantly elucidated by reference to comparative anatomy and physiology, and also by the outlines of pathology. The Course of Physiology is illustrated by the constant use of the microscope. The Course of Practical and Descriptive Anatomy includes the demonstrations of the bones, ligaments, joints, muscles, arteries, veins, absorbent glands, the brain, the nerves, the several viscera, and all the membranes and fasciæ; it includes regional anatomy. In this course the Professor is assisted by the Demonstrator of Anatomy. Surgical Anatomy is taught by a special course, and consists of demonstrations of the principal regions of the human body, considered in their practical relations to accidents, injuries, and to operative surgery. The Courses of Dissections are constantly superintended by the Professor and the Demonstrator of Anatomy. The text-books chiefly used are the following, viz., Todd and Bowman's Physiological Anatomy; Carpenter's Human, Animal, and Comparative Physiology; Valintin's Physiology; Quan's and Sharpey's Works; Harrison's Anatomy; Harrison on the Arteries; Corbett on the Arteries; Wilson's Anatomy; Gerber's, Quickett's, and Hassal's Microscopic Anatomy.

C.—The lectures are illustrated by recent and prepared dissections, by charts, plates, diagrams, and anatomical preparations. Minute anatomy of all tissues is illustrated by the use of microscopes, and by microscopical preparations. The principles of physiology are elucidated by experiments instituted upon animals, when deemed necessary.

D.—The students are examined, *viva voce*, on the subjects treated of in the lectures; sometimes once per week; at other times every fortnight. On particular occasions the examinations are held more frequently, according to the degree of difficulty of the subjects to which their attention has been directed. Examinations are generally held on Monday or Saturday, at the hours of twelve or one o'clock. Written examinations in these classes have been (hitherto) resorted to only at the Examinations, held in October, for the Scholarships, and at the Sessional Examination, which takes place at termination of the Medical Session.

E.—These Courses are attended only by students of the Medical Faculty.

F.—Number of students in the class of Anatomy and Physiology, fifty-three; seven being not matriculated students—viz., matriculated, forty-six; non-matriculated, seven. Number attending the Course of Practical and Descriptive Anatomy, forty-six—viz., thirty-eight matriculated, and eight not matriculated students. The majority have attended their Courses of lectures, and the extra Courses of special lectures, with great regularity.

G.—The students conduct themselves with extreme attention and order during the delivery of the lectures. The general state of discipline in the Anatomical Classes has been exemplary.

H.—The supplies of preparations, instruments, plates, charts, and diagrams available for the purposes of instruction, are considerable, in an institution so recently established; and the rooms are kept in a state of cleanliness. But the Clarendon Building, and its apartments, do not afford proper accommodation for the delivery of lectures, for the convenience of the Professor, for the arrangement and conservation of the Anatomical Museum; the theatre being deficient in size and ventilation, occasions much inconvenience to the Professor and students. Such condition is calculated to impair the health of all parties.

J. H. Corbett.

No. 18.—Report of Professor of the Practice of Physic.

A.—1. Two Terms, extending over six months. 2 First Term, seven weeks; second Term, seventeen weeks, with the exception of a fortnight at Easter. 3. Three lectures each week, at three o'clock—on Mondays, Wednesdays, and Fridays.

B.—A Course of lectures on the Practice of Physic; including the history, pathology, symptoms, and treatment, of internal diseases, and such affections of the external parts as are symptomatic of internal disease.

C.—The lectures are illustrated by plates delineating the external characters of diseases, and the organic changes produced by them; also by morbid specimens, some obtained from an extensive pathological museum, others by a recent examination of the dead body, whenever opportunities are presented for such.

D.—The modes of instruction here specified does not apply to this course, except in a limited degree—such as the examination of the students in the portions of the course already gone over. This is done at irregular intervals.

E.—None but medical students.

F.—The number of matriculated students this year are twenty-four; non-matriculated, three. The attendance is generally most regular.

G.—The conduct of the students at lectures is most orderly; and I have reason to believe the state of discipline generally, in the College, is very good.

December 11, 1856. D. C. O'Connor, A.B., M.D.

No. 19.—Report of Professor of Surgery.

A.—The Course of Surgery, 1855 and 1856, commenced November 2nd, and terminated May 5th. Sixty lectures were given. The lectures were delivered three times a week; on Mondays, Wednesdays, and Fridays, at three o'clock.

B.—The title of the course was, "On the Principles and Practice of Surgery." These lectures included inflammation, suppuration, ulceration, gangrene, hospital gangrene, erysipelas, scrofula, inflammation of the several tissues and textures of the body, burns, ulcers, hæmorrhage, wounds of arteries, aneurisms, wounds and diseases of veins, pyœmia, irritative fever, tetanus, fractures of the skull, concussion of the brain, operations on the head, trephining, wounds of face and neck, operations on the face and neck, wounds of thorax, wounds of stomach, kidneys, bladder, womb; of the joints; hernia, operations for hernia, gunshot wounds, duties of military surgeons, hospital organization, diseases of urinary organs —of the testicle, bladder, rectum; tumours, carcinoma, diseases of the breast, diseases of the bones, injuries and diseases of the spine, inflammation of joints, diseases of hip-joint, knee, shoulder, elbow, wrist; fractures, dislocations, operation upon arteries, bronchotomy, lithotomy, amputations, resection of joints, diseases of the ear, diseases of the eye, ophthalmic surgery, syphilis, diseases of the skin. The text-books recommended are Millar, Cooper, Pirrie, Luton, Thompson, Velpeau, Chelius.

C.—The lectures were demonstrated by plates, diagrams, surgical instruments and apparatus, by anatomical, physiological, and pathological illustrations.

D.—Tutorial instruction was not employed. The Professor, however, took advantage of being surgeon of the North Infirmary to make the clinical instruction which he gave in that hospital conducive to the illustration of his Academical lectures.

E.—The students in this class belong to the Faculty of Medicine.

F.—Thirty matriculate; three non-matriculate; total, thirty-three. The attendance of the students was regular.

G.—The general conduct of the students was satisfactory.

H.—The condition of this department is seriously affected by the want of a proper building for the Medical Faculty of the College. In giving a full course of surgery the Professor must employ illustrations from every branch of medical science, while the short time which can be allowed for treating such a number of subjects makes it necessary that the students should examine and study the several illustrations during the intervals between the lectures. Under the present arrangements the Anatomical and Physiological specimens are in one building, and the Pathological Museum is in another, so that very valuable preparations are exposed to much risk in removing them to the lecture-room. Besides the small space into which these valuable collections are crowded does not allow a proper classification, and prevents the Medical Museum being made available, as far as it ought to be, to the purposes of instruction.

December 9, 1856. Denis B. Bullen, M.D.

No. 20.—Report of Professor of Midwifery.

A.—Midwifery. 1. Six months, November to April, inclusive. 2. ——. 3. Three. Monday, Wednesday, and Friday. Four o'clock.

B. Midwifery. Anatomy and physiology of reproductive organs. Physiology, pathology, and signs of pregnancy. Labour; its physiology, mechanism, and management. Puerperal state; its treatment. Treatment of puerperal and infantile diseases.

C.—Diagrams, plates, models, preparations, &c.

D.— ———.

E.—Medical.

F.—Thirteen matriculated; two non-matriculated; total, fifteen. Pretty regular—the average of all.

G.—Good.

H.—Good. Fitments required last November not yet received.

December 8, 1856. J. R. Harvey.

No. 21.—Report of Professor of Materia Medica.

A.—Materia Medica. 1. Six months. 3. Three lectures weekly. Tuesday, Thursday, and Friday. Two to three, P.M.

B.—Materia Medica. 1. General physiological and curative action of medicines. 2. Natural and chemical history, action, and uses of individual medicines, treated of in the order of an

arrangement founded on their physiological effects. Text-books—Neligan's Medicines, &c.; Christison's Dispensatory; Pereira's Materia Medica.

C.—The lectures are illustrated by diagrams, plates, fresh and dried plants, specimens of drugs, and experiments.

D.—Instruction professional, with occasional examinations. These examinations would be more frequent if the Professor could get a convenient hour for them.

E.—Medical Faculty.

F.—Total students, twenty; matriculated, sixteen; non-matriculated, four. Attendance good.

G.—General conduct of the students excellent. No discipline required.

H.—Condition as to cleanliness good. Several fitments which are required are already ordered. Window-blinds for the museum and lecture-room are needed.

December 12, 1856. ALEXANDER FLEMING.

No. 22.—REPORT of MEDICAL JURISPRUDENCE CLASS.

A.—The course lasts three months. Three lectures are given weekly; on Tuesday, Thursday, and Friday, at two, P.M.

B.—The subjects chiefly enlarged upon are Toxicology, Infanticide, Injuries, Wounds, the Rules regulating the admission of Evidence in Legal Procedure. The text-books recommended are Taylor's Medical Jurisprudence, and Taylor on Poisons. The perusal of leading cases reported, as, for example, Lord Ferrer's case, Hadfield's case, the Gardner and Douglas Peerage cases.

C.—The course is illustrated by experiments where required.

D.—The method of teaching is by lectures alone.

E.—Students of the Faculty of Medicine.

F.—Twelve matriculated students attended the course regularly.

G.—Their conduct was very good and the discipline of the class excellent.

H.—The Department of Medical Jurisprudence is at present entirely dependent on the Department of Chemistry for the apparatus and materials necessary for illustrating the toxicological portion of the course.

J. BLYTH, M.D.

December 10, 1856. MICHAEL BARRY.

APPENDIX E.

OFFICIAL REPORT OF LIBRARIAN.

To Sir ROBERT KANE, President Queen's College, Cork.

Queen's College, Cork, Dec. 8, 1856.

SIR,—I have the honour to make you the following Return to the queries submitted to me on the third instant:—

1. What is the number of volumes in the Library, classified according to their professional departments, as far as possible?

The number of volumes at present, either actually in the Library, or in circulation among Professors or Students, is 7,761, including 104 volumes of maps and plates, and 85 pamphlets on various subjects. They are classified according to their professional departments in the following manner:—

	Vols.
Greek Language and Literature,	327
Latin do. do.	232
English do. do.	1,028
Modern do. do.	471
Celtic Languages,	111
Oriental Languages,	60
History, { Ancient,	85
History, { Modern and Mediæval,	1,294
Logic and Metaphysics,	218
Theology,	132
Pure Mathematics,	197
Mathematics (mixed) and Experimental Physics,	371
Fortification, &c.,	183
Geography, Voyages, and Travels,	181
Natural History,	359
Chemistry,	365
Geology and Mineralogy,	168
Engineering and Architecture,	122
Agriculture,	111
English Law,	141
Jurisprudence and Political Economy,	451
Medical Library,	1,001
Total,	7,761

The number of volumes in the Medical Library are arranged in the following manner:—

	Vols.
Anatomy and Physiology,	267
Surgery,	115
Practice of Medicine,	210
Materia Medica and Therapeutics,	161
Medical Jurisprudence,	21
Midwifery,	91
History of Medicine,	6
Medical Journals,	130
Total,	1,001

About 114 volumes, given under the heads of Chemistry and Natural History, are common to the Medical and General Library, so that the Medical Library may be said to consist of 1,115 volumes.

2. What is the number of volumes purchased within the past year?

From December 1st, 1855, to December 1st, 1856, there have been purchased 1,343 volumes, and presented to the Library during the same period, eleven, making total increase to Library for the year of 1,355 volumes.

3. What is the general state of the Library, and what progress has been made in stamping, binding, and cataloguing?

Owing to the want of shelf accommodation consequent on the increase in the number of books for the past few years, the arrangement in some departments is not as satisfactory as I would wish. This inconvenience, however, will be soon removed by the extension of the gallery erected last year. The cases to be put up in this gallery will afford accommodation for some 5,000 additional volumes. In other respects the state of the Library is, with a few exceptions (to be specified in answer to query 7), very satisfactory.

All books, immediately on being received, have the College Library Stamp impressed on them in suitable places. There is no book at present in the Library without this mark.

There have been bound within the past year 378 volumes, at an expense of £45 6*s*., sterling. The binding is executed in a very superior manner, and each volume has the College Arms stamped in gold on its back.

Every book in the Library is duly catalogued in the manner described in answer to the following query:—

4. Describe the mode of cataloguing employed?

The exact title of the work, with the number of volumes it contains, the edition, date, and place of publication, and the numbers and letters denoting its place in the Library shelves are entered—first, in a catalogue in which the books are arranged in the alphabetical order of the authors' names; secondly, in a catalogue *raisonne*, in which they are entered according to their subjects; thirdly, in one whose principle of arrangement is the case and shelf to which the book belongs.

5. State the amount of losses of books within the year, distinguishing accidental loss or theft, or injury, accidental or intentional?

There has been no loss of books whatever within the past year, nor has any injury, accidental or intentional, been done to any books.

6. As to the discipline of the Library and the conduct of the students while there?

The discipline of the Library is secured by a set of rules drawn up by the Council of the College. It is the duty of the librarian to see that such rules are carried into effect, and report to the Council any student who violates them. For the past year I had, on two occasions only, to report the violation of any Library regulation, and it gives me great pleasure to have to report that the students uniformly obey these rules, and that their conduct while in the Library is orderly and gentlemanly.

7. What is the condition of the Library as to the fitments and supplies necessary for complete efficiency?

The following are necessary to the complete efficiency of the Library:—

1. A thick carpet made of cocoa-nut fibre, or some such material, which would lessen or altogether destroy the noise of footsteps.
2. A more effective mode of heating than that at present employed, which consists of a large fire-place, of little use in the general heating of the room, and a moderately-sized stove.
3. A Library store-room, the want of which is at present found to be a source of very great inconvenience, there being no place in which books and other descriptions of Library property, that cannot be immediately received and regularly catalogued, may be preserved with safety.

8. What is the condition of the Library as to cleanliness and efficiency of attendance?

I have had no occasion to remark a want of cleanliness in the Library, and the present Library porter is a most efficient servant.

I am, Sir, your obedient servant,

Matthias O'Keeffe, Librarian.

APPENDIX F.

Return furnished by the Curator of the Museum for the Official Information of the President, for the Session 1855–56.

1. The Museum of Queen's College, Cork, contains five departments—namely, Zoological, Botanical, Geological, Palæontological, and Mineralogical.

2. The number and general nature of the specimens in the Museum are as follows:—

Specimens of Zoology and Comparative Anatomy—		
Vertebrata,	469	
Articulata,	1,268	
Mollusca,	2,096	
Radiata, &c.,	191	
		4,024
Botanical specimens, dried plants in Herbarium,		3,081
Geological specimens,		4,000
Palæontological—British,	600	
Irish,	750	
Foreign,	2,012	
		3,562
Mineralogical specimens,		1,931

3. The number of objects obtained during the official year 1855–6 was almost nil.

4. Since the termination of the official year, 1855-6, numerous important additions were made to the departments, more particularly to those of Zoology and Botany. To the former have been added several hundred specimens of Vertebrata, and skeletons; and to the latter, a large collection of Pyrenean plants, and other rare plants collected by Professor Smith, as well as a series of Irish grasses.

A large series of fossils has also been added to the Palæontological department, consisting of Eocene, Tertiary, Cretaceous, Oolitic Liassic, Triassic, Permian, and Silurian fossil forms, from several portions of Great Britain.

5. As respects the progress of the classification and arrangement of the specimens in the Museum, the zoological portion containing the Invertebrata have been classified and arranged. The Vertebrata, owing to the want of proper cases, are only temporarily arranged; but it is expected that, before the end of this session, the accommodation which was last year applied for will be granted; for, unless such be the case, the specimens will, in all probability, suffer injury, and the arrangement of this portion of the Museum will be still further delayed.

The whole of the Herbarium is classified, except a small portion which, also from want of accommodation, is not yet complete in its arrangements.

The Geological collection is expected to be in a perfect state before the end of the session, and is now being re-arranged in such a manner as to be most useful for the purposes of study.

The foreign Palæontological portion of the Museum is completely arranged and catalogued. The British and Irish are yet in want of many specimens before their perfect arrangement can be effected. As far as they extend, they are arranged, and the addition made thereto naturally fall into their proper position.

The minerals have also been re-arranged, in part, during last session. This arrangement has, however, been prevented from being completed by the same cause which has operated in the zoological department—viz., the want of proper cases for the accommodation of the specimens. The cataloguing of this department is so far advanced that, with the addition of another desk-case to receive the specimens, it can be rendered complete in a very short time.

6. From the foregoing remarks, in answer to No. 5, it will be perceived that, as concerns fitments, cases, and accommodation to render the Museum available for exhibition and instruction, this department is, in many respects, very much behind.

During last session, I applied for three upright cases to receive the Vertebrata, and one desk case for the minerals, as well as a nest of drawers for the remaining portion of the botanical specimens. None of these have yet been received; but I am given to understand that the desk case will be delivered early next Term, and that the whole of the other cases may be expected before the end of the present session.

7. The general conduct and discipline of the students, as regards the Museum, is such as to be satisfactory to myself and, I believe, also to the Professor of Natural History.

8. The Museum, as respects cleanliness and attendance, has been hitherto in a suitable condition. There are, however, several defects as regards the structure of the building, which tend to render the former a matter of some difficulty. The chimneys are exceedingly liable to smoke; and many of the windows, more particularly on the roof, let in the rain. The north wall is also damp, and much spotted from this cause. The clumsy heavy beams supporting the roof, also gather dust upon them, which is constantly falling down and dirtying the cases. And the roof itself, in consequence of its heavy appearance and darkness, makes the Museum have a soiled aspect; and it also absorbs much light, so that many of the specimens in the cases cannot be recognised, except on a bright day. To remedy this, I would suggest that the tie-beams be taken away altogether, if their support to the roof can be dispensed with.

December 11, 1856. Robert Harkness.

APPENDIX G.

Furnishing details of the Collections of the Museums of the Medical Faculty, and of the means of instruction in other Departments engaged in the Medical School. Also (forming Appendix H) Copy of documents furnished to the University Senate, and to Government, regarding necessity for additional accommodation for the Medical Faculty.

Report of the Professor of Natural History as to the Means of Instruction in his Department, in reference to the Medical Classes of the Queen's College, Cork.

Number of Specimens or Preparations in Zoology and Comparative Anatomy, 4,024.
Number of Dried Plants in Herbarium, 3,081.
Number of Medical and other Plants in Botanic Garden, 1,640.
These Collections are accessible to the students at all College hours, and free access is given to the public generally at hours not devoted to Class instruction.

December 6, 1856. William Smith.

Return by the Professor of Anatomy and Physiology of the Condition and Number of the Preparations available for the Illustration of the Lectures upon these Subjects.

In the collection purchased from Dr. Alcock, and placed in the Clarendon Building, there are 205 catalogued preparations. These preparations are highly valuable; they illustrate the general and structural anatomy of the tissues of the human frame. The collection comprises preparations which exemplify the human and comparative anatomy of the organs of digestion, of circulation, of respiration, of renal secretion and excretion, of the reproductive systems, of the nervous system, of the eye, of the tongue, teeth, and skin, &c., &c.

These preparations have not sustained any injury, but it is absolutely necessary for their preservation that the fluid should be filtered on some, and that new spirit of wine should be placed on several of the number; it is also necessary that new covers should be made on all the glass vessels, so that they may be secured in a better manner, in order to guard against the constant tendency to the evaporation of the fluid in which the specimens are suspended.

The following list indicates the number devoted to special purposes:—

Preparations of the Tissues,	25
Digestive Apparatus,	58
Organs of Circulation,	30
Organs of Respiration,	14
Brain and Nervous System,	26
Organs of Renal Secretion,	15
Reproductive Systems,	30
The Eye,	7
Total,	205

In this collection there are preserved in spirit of wine 188, and 17 dried preparations.

In the Clarendon Building there are, in addition to the above, several preparations of the Osseous System. All the preparations of the bones of the skeleton have been much used by the students; these specimens are of little value.

Return of the Anatomical Preparations, Plates, Diagrams, and Charts, in the Clarendon Building.

The Alcock Collection,		205
In Glass and preserved in Spirit of Wine,	188	
Dried Specimens,	17	
	205	
Plates and Diagrams,		133
Plates on Rollers,		10
Marshall's Physiological Charts,		9
Microscopic Preparations,		68
Old do. do.		12

Two Microscopes. Two Skeletons. Several Dried Bones, which have been long in use.

The plates, diagrams, and charts, are in a good state of preservation, and have not sustained any injury, except that resulting from their constant employment by the Professors for the illustration of their lectures.

The preparations in this list are chiefly used by the Professor of Anatomy and Physiology.

Of the Anatomical Collection purchased from Dr. Alcock there are some quite available for the illustration of the lectures delivered by the other Medical Professors.

The preparations of the tissues are capable of being advantageously employed by the Professor of Medicine or Surgery.

The preparations of the urinary and genital organs are employed by the Professor of Surgery.

The preparations of the reproductive system, and of the fœtal lungs, heart, and skeletons, are available, and used by the Professor of Midwifery.

It may be considered that the Professor of Surgery makes use of sixty, the Professor of Midwifery of thirty, of the Anatomical Collection which is placed in the Clarendon Building.

ANATOMICAL PREPARATIONS in the PATHOLOGICAL MUSEUM.

In this Museum is placed (for the present time) the collection purchased from Dr. Roche. The Anatomical preparations are in number 163. Of this number eighty-nine are in glass vessels, the others dry preparations. This part of the Museum chiefly illustrates comparative Anatomy, and is also employed by the Professor of Natural History.

The following List indicates the nature of the preparations in this collection :—

Skeletons of animals,	22
Skulls of various animals,	21
Skeletons of Fœtus,	5
Several sets of Teeth,	3
Dried preparations of the Ear,	22
Preparations of the Eye,	8
„ Tadpole,	8

There are also in this collection preparations of the skin, of the nervous system, of the teeth of animals, of the digestive system. All the preparations in this collection are in good order. The collection first mentioned contains 205. The Anatomical preparations purchased from Mr. Roche, are 163 ; so that there are available for Anatomical instruction, 368 catalogued preparations.

It may be well further to state, that some of the preparations in the strictly Pathological collection, are also, at appropriate times, employed for the elucidation of the Lectures on Anatomy and Physiology.

In conclusion, I beg to suggest that measures may be taken, as soon as possible, to re-arrange the valuable collection in the Clarendon Building.

January 8, 1857. JOSEPH HENRY CORBETT.

The above is a supplement to a Report furnished to the Registrar and Bursar, on 3rd December, 1856.

RETURN of the PREPARATIONS, SPECIMENS, and ILLUSTRATIONS, in the PATHOLOGICAL MUSEUM.

Spirit preparations,	450
Dry preparations,	192
Casts in plaster,	117
Models in papier maché,	7
Wax models of Diseases of the Skin,	30
Oil paintings,	19
Total,	815

DENIS CHARLES O'CONNOR, M.D.,
Professor of Practice of Physic.
DENIS R. BULLEN, M.D.,
Professor of Surgery.

December 10, 1856.

Cork, Dec. 11, 1856.

SIR,—In my reply to your letter of the 5th inst., I beg to state, for the information of the President, that the number of Anatomical and Pathological specimens in the Museum of the Midwifery Department of Queen's College at present amounts to but twenty-six; and there are from twelve to twenty in the Anatomical and General Medical Museums available for illustration in this branch. The wax and papier maché models amount to about twenty-four, and the plaster casts to thirty. In addition to these there are over thirty large coloured diagrams, which I have had made from time to time. I mention these latter in case the President should wish them included, which I do not clearly gather from your note.

Yours, respectfully,
J. R. HARVEY, Professor of Midwifery.

The Registrar, Queen's College, Cork.

December 8, 1856.

Sir,—I beg to supply the return requested of the number of specimens and general character of the Materia Medica Museum.

This Museum contains specimens of simples and preparations of the Materia Medica :—

Of the animal Materia Medica,	70
„ vegetable „	980
„ mineral „	600
	1,650
Of plates of medical plants,	580
Of diagrams,	50
Of dried specimens of medical plants,	775
Of specimens of minerals,	600
Of articles of apparatus,	300

I avail myself, also, constantly of specimens of fresh medical plants from the Botanic Garden to illustrate my Lectures.

I am, Sir, your obedient servant,

Robert Kenny, Esq. Alexander Fleming.

December 10, 1856.

Sir,—I beg to say that there are ample means at the command of the department of which I am Professor for the instruction of Medical Students.

For the illustration of the Courses of Lectures the College possesses the usual chemical and philosophical apparatus, and a collection of chemical preparations and salts. Along with these may be enumerated a large number of diagrams and drawings, which belong to myself, and are used in the Lectures.

In the department of Practical Chemistry there is a well arranged laboratory, fully supplied with retorts, beakers, and other chemical apparatus.

I am, Sir, your obedient servant,

R. Kenny, Esq.,
Registrar.

J. Blyth, m.d.,
Professor of Chemistry.

APPENDIX H.

Memorial, &c., relative to Increased Accommodation required for the Medical School, Queen's College, Cork.

[A.]

51, Stephen's-green, Dublin,
September 10, 1852

Sir,—I have the honour to enclose a Memorial, addressed by the Professors of the Medical Faculty in Queen's College, Cork, to his Excellency the Lord Lieutenant, and which the Dean of the Faculty requested me to submit for his Excellency's consideration.

In accordance with the request of the Faculty, I beg to state that I shall feel much obliged by your bringing the Memorial under his Excellency's notice, at your earliest convenience.

I have the honour to remain, Sir, your most obedient servant,

Robert Kane,
President, Queen's College, Cork

John Wynne, Esq
Under-Secretary.

[B.]

To the Right Hon. the Earl of Eglinton and Winton, Lord Lieutenant-General, and General Governor of Ireland, the Memorial of the Professors of the Faculty of Medicine in the Queen's College, Cork :

Humbly Sheweth,

That your Memorialists were appointed at the foundation of the Queen's College, Cork, to teach the science of Medicine in all its branches.

That in the original building of the College, no special provision was made for conducting the business of the Anatomical and other departments of the Medical Faculty.

That the building which has been since erected, with a view to supply this deficiency, is quite inadequate to the objects proposed.

That, in addition to the great inconvenience suffered from want of space in the Anatomical Theatre, and in the Professor's room, there is no place in which the Anatomical and Physiological Museum can with safety be deposited, nor is there any room whatever for the Pathological Collection lately purchased for the College.

Memorialists therefore earnestly pray that your Excellency may be pleased to direct an inquiry to be made into these matters, with a view to affording such suitable buildings and appointments as will enable Memorialists to discharge the duties of their Professorships with the best advantage to the interests of the College.

And Memorialists will ever pray.

(Signed) D. C. O'Connor, A.B., M.D.
Dean of the Faculty of Medicine.

August 12, 1852.

[C.]

Memorandum of want of additional accommodation for the business of the Medical Faculty in the Queen's College, Cork. Prepared for the information of the Senate of the Queen's University, by Sir Robert Kane.

October 18, 1852.

The plan of the Queen's College, Cork, as originally prepared by the architect, and adopted by the Government, did not include any provision whatsoever for the business of the Medical Faculty.

Consequently in the first session of the College, the Medical and Anatomical Lectures were all delivered, and the dissections performed, in those portions of the buildings of the Faculty of Arts which were then not required for their proper use, *i.e.*, that of the senior classes in Arts, Engineering, and Agriculture.

As this arrangement could not possibly be continued even for a second session, representations were made to his Excellency Lord Clarendon of the necessity for proper accommodation for the Medical Faculty; and it being found impossible to obtain public funds for such purpose, a sum was collected by the personal exertions and liberality of Lord Clarendon, of a few hundred pounds, by means of which a small building was erected on the College grounds, capable of receiving the classes of Practical Anatomy, and of Anatomy and Physiology.

This so-called Clarendon building contains a Dissecting-room, a small Lecture-room, two rooms used, one for Anatomical demonstrations, and the other for storing the Anatomical museum, and two small closets, used as private rooms for the Professor. All these rooms are on too small a scale even to serve the uses of the Anatomical and Dissecting classes now attending the College; and are insufficient to provide for the larger classes which may be expected in future to attend.

There remain, however, totally unprovided for, the Professors of Surgery, of Midwifery, of Practice of Medicine, and of Materia Medica. These Professors, who should have proper and special accommodation, are obliged to lecture in the room of the Faculty of Arts, but are, in many instances, put to much inconvenience from doubts and disputes occurring; the Lecture-room being required also by the Arts Professors, for whose accommodation the main building is even not large enough.

Thus the Lecture-room of the Natural Sciences, being occupied by the Medical Professors, the Lectures on Agriculture are delivered in the School of Engineering, contrary to the strongly expressed wish of the Professor of Engineering, whose classes are thereby disturbed; and the Professor of Geology has been enabled to get a place to lecture only by closing off a piece of the museum by means of cases, and thereby forming a sort of screened room, in which a few forms are placed for the Students.

In order, therefore, to allow of the Professors of Agriculture and Geology getting their proper theatre to lecture in, it is indispensable that a new Lecture-room be provided for the Medical Faculty, by which means the Professors of Surgery, Midwifery, and Practice of Medicine, shall be removed out of the Arts building, and, if possible, also Materia Medica.

A further and equally imperative want is a museum capable of holding the very extensive collections of Medical and Surgical Pathology and Midwifery belonging to the College. These are at present stowed away in the Lecture-room of the Faculty of Law; producing the double inconvenience, that the collections, not being classified or arranged, are of little or no use for study or reference, and that the Professors of Law and Logic not being able to use their own Lecture-room, are crowded in on the Professors of Classics and Mathematics to their mutual dissatisfaction and inconvenience. It is even the more necessary to provide a museum room of proper magnitude to receive those collections in the building of the Medical Faculty, as the small room in the Clarendon building, now allocated to the Anatomical museum, is not at all sufficient to display properly even the collection of Anatomy and Physiology at present obtained, and that the museum of Materia Medica, by which an apartment in the Arts building is now occupied, should also take its place with the other departments of Medical instruction in the building of the Medical Faculty.

Looking to the manner in which the necessities above indicated can be most easily and most economically supplied: it is proposed to enlarge the Clarendon building of the Medical Faculty by an erection of two stories, as represented in the accompanying plans. The lower story containing a museum of such dimensions (say 30 by 60 internally) as should accom-

modate the Pathological, Physiological and Midwifery collections. The upper story containing a lecture-room capable of accommodating from 90 to 100 Students, with private and preparation rooms for the Professors annexed. This new building to be connected with the Clarendon building by hall, staircase, and passages, as marked in the plan. By this arrangement the entire Anatomical department would be situated on the upper floor, and the peculiar arrangements for the dissections, &c., would not be mixed up with the business of other departments. The rooms on the ground floor and the little theatre already existing, which accommodates about 30 Students, could be used by the Professors of Midwifery, Surgery, &c., whose classes may not become so numerous. With this amount of accommodation, the Professors of the Medical Faculty (at least except Materia Medica) could be moved into the proper buildings of their faculty, and the Arts and Law Professors could obtain possession of their proper lecture-room.

Great importance is attached to this removal, as not merely conducive to harmony among the Professors, but also in a great degree necessary for efficiency of instruction; as in many departments proper attention cannot be given to the preparations for Lecture, where too many Lecturers are crowded, closely following each other in the same lecture-room.

As regards the financial estimates for the new buildings proposed, it will be for the Commissioners of Works to decide; but as far as has been considered, it would appear that a sum of £1,500 would suffice to complete the necessary accommodation, including the fitments of cases for the museum, and of tables, &c., for the Theatre and Professor's rooms, a tank and pipes for water supply, and gas to the lecture-room. With this sum should also be included the cost of finishing more properly the existing Clarendon building, which was built hurriedly and in so parsimonious a manner as to reflect discredit on the College, and be seriously inconvenient to the Students, the walls being only rough plastered, the wood-work untrimmed, the roof ceilings naked. These defects can easily be remedied when the new building is in hand, and their cost should be kept in view when estimating for the works proposed.

Extract from Report of the Senate of the Queen's University. Dated October 28, 1852.

A. The Senate have also considered a letter from the President of the Queen's College,
B. Cork, referring to a Memorial from the Professors of the Faculty of Medicine of that College, addressed to the Lord Lieutenant, and praying for increased accommodation by the provision of additional buildings and apartments for the use of the School; and which Memorial was transmitted on the 11th September, 1852, to the Senate, by the Under-Secretary, for their opinion. Having requested the President of that College to inform them of the exact amount and nature of accommodation required, and the mode in which it could be provided, having regard to the existing buildings already appropriated to the
C. Medical department of the College; they have been accordingly furnished with his statement, and a plan of the proposed addition, and they are of opinion that, in conjunction with the Memorial of the Professors, it shows that the existing arrangements for the purposes of the School are seriously defective, and that the additional accommodation desired can be conveniently provided, and ought to be afforded without delay.

APPENDIX I.

Proceedings at the Triennial Visitation of the Queen's College, Cork, held Wednesday, the 28th day of March, 1855.

Present—The Right Hon. Maziere Brady, Lord Chancellor of Ireland, Vice-Chancellor; His Grace the Archbishop of Dublin; the Lord Bishop of Cork, Cloyne, and Ross; the President of the College of Physicians, Ireland; the President of the College of Surgeons, Ireland.

The President, Vice-President, Professors, Officers, and Students, having answered to their names, and the Visitors, amongst other things, inquired whether any Students considered themselves aggrieved by any sentence of the College authorities. Mr. John Pope Hennesy, a student, complained that he was aggrieved by an Order of Council, of the 9th of June, 1854, whereby he was deprived of his Prizes and Certificates, on the alleged ground of non-attendance on the lectures of Wyville Thompson, the then Professor of Natural History, and prayed that such order might be reversed, on the ground that he did, in fact, attend the requisite number of lectures on Physical Geography, and that the Report of the Professor on which the Council proceeded was, in that respect, erroneous. Whereupon, hearing Richard Deasy, Esq., Q.C., on behalf of the said John Pope Hennesy, and the statement of the President in explanation, and referring to the report made by Professor Thompson, the Lord Chancellor pronounced the judgment of the Visitors.

That, inasmuch as it appeared that a class roll of attendance on his lectures on Physical Geography had not been kept by Professor Thompson, and that therefore his Return to the Council of the character of the attendance of the Students thereon, and upon which the Council have come to their decision of which Mr. Hennesy complained, was founded on recollection, in which he might have been mistaken, it is the opinion of the Visitors, that the Council should be at liberty to receive such evidence as Mr. Hennesy may be able to lay before them in support of his complaint, and to examine into and consider the

same. And in case they shall be of opinion, after such examination, that Mr. Hennesy did, in fact, give a sufficient attendance on the said course of lectures to have entitled him to be classed as he prayed by his Memorial, that the Council be at liberty to rescind their rule respecting Mr. Hennesy, and to give to him such certificate as he would have been entitled to had he been so classed by Professor Thompson; and to award to him any Prizes or Honors of which he was deprived by means of their former decision, and which it may now be in their power to give him. And that the Council be at liberty, if any difficulty shall arise to them in making such investigation, to report to the Visitors for their further consideration.

MEETING of COUNCIL, March the 29th, 1855.

In accordance with the declaration made by the Visitors at the triennial visitation, held on the 28th of March, 1855, that it should be referred to the Council of the College to inquire and report whether Mr. John Pope Hennesy, a student, had attended the requisite number of lectures on Physical Geography, delivered by Professor Wyville Thompson, during the second Term of the Session 1853–54, or not: the Council, at a meeting held the 29th of March, 1855, inquired into the matter so referred to them, in the presence of Counsel and Solicitor, on behalf of Mr. John P. Hennesy. Professor W. Thompson, in a letter addressed by him to the Registrar, stated that all information in his power to afford on the matter of the inquiry was contained in his Official Return and Report. The Council, consequently, did not deem it necessary to require Mr. Thompson's presence.

The Council having read the several documents, and having heard and considered the evidence in the schedule, and having regard to the regulations of Council, prescribing the duty of Professors keeping regular rolls to record the attendance of the students, find that Professor Thompson did not keep a regular roll of attendance on the Class of Physical Geography; and they further find that Mr. John Pope Hennesy did attend the requisite number of lectures to entitle him to a qualifying mark for attendance; and that therefore the Council respectfully submit that Professor Thompson's Return to the Council be set aside, so far as regards the disqualification of Mr. Hennesy, and that Mr. Hennesy should get a certificate for attendance accordingly.

The Council finding that there is a fund at their disposal, and sufficient for the purpose, further suggest for the consideration of the Visitors, that Mr. Hennesy should now receive the amount of the prizes for which he was recommended in June, 1854, by the Professors in Metaphysics, and Political Economy and Jurisprudence, together with a certificate of the fact, that those prizes had not been then awarded to him, solely on the ground of the disqualification by Professor Thompson, as to the lectures on Physical Geography.

This finding and report of the Council is respectfully submitted for the consideration of the Visitors.

ROBERT J. KENNY, Registrar.

APPENDIX K.

No. 1.—ACCOUNT of MODE of EXPENDITURE of the GRANT of £4,000, made in 1849, to QUEEN'S COLLEGE, CORK, for Outfit and Maintenance of Libraries, Museums, and other Departments, and which Expenditure extended from September, 1849, to 31st March, 1854.

APPENDIX L.

Documents referring to Discipline and Conduct of Students, and of the College, generally, with Vice-President's Return, and the Reports of the Deans of Residences.

Form of Vice-President's Return.

Return to be filled up by the Vice-President and sent in to the Registrar for the official information of the President on or before the day of , for the Collegiate Session 185 -5 .

A.—As to the state and efficiency of all the several departments of the College, to which the constant supervision of the Vice-President is directed by the Statutes.

B.—As to the state of order and discipline in the College, to which the particular attention of the Vice-President is directed by the Statutes.

Signed, By order of the President,

_____ Registrar.

A.—In accordance with the accompanying form of return, I beg to report:—The educational departments of the College were in an efficient state during the Session 1855–6. The new regulations, enforcing attendance at lectures on the part of the students, and the daily call of the class-rolls by the several Professors, which had been made by the Council, at my suggestion, at the close of the Session 1854–5, came into operation at the commencement of the Session 1855–6. These have had the effect of assimilating the regulations of the Medical Faculty, which had previously been of a less stringent character, to those of the other faculties. The departments of the officers of the College have been conducted with zeal and efficiency. The recently appointed Librarian has introduced many and excellent reforms in the management of the library. The department of the servants of the College has been in a less satisfactory condition, owing chiefly to the unfitness of an individual for the office which he held among them. By recent changes introduced by the President, I hope these disorders have been removed.

B.—On the industry and good conduct of the general body of the students I can report favourably. One instance, however, of serious misconduct has occurred, entailing on the offender the punishment of rustication for a period of two years. With a view to secure greater confidence in the results of the College Examinations, I introduced at Council, on May 27th, 1856, very stringent regulations to guide the conduct of the students while under examination. I regret to report that these regulations were violated by some of the students at the Sessional Examinations. Their conduct was brought under the notice of the Council, and they were punished accordingly. On the 21st October these regulations were modified by the Council, and I have a confident hope that they will suffice to prevent the recurrence of similar irregularities.

December 12, 1856. John Ryall, Vice-President.

Resolutions of Council, June 9, 1855, regulating attendance on Classes, and granting of Certificates for same.

2. That the Class-roll shall be called within the first five minutes after the hour appointed for the commencement of each Lecture, and that no Student who shall not answer to his name shall get credit for attendance, unless he can give a satisfactory reason to the Professor for his absence during the calling of the Roll.

3. That no Student shall be entitled to a Certificate of attendance on any Course of Lectures, or be admitted to the Sessional Examination of the Class, who shall not have attended at least *one-half* of the Lectures of which such Course shall consist.

4. That those Students who shall have attended *five-sixths* of the Course shall be entitled to a Certificate of having attended "very regularly."

5. That those who shall have attended *two-thirds* of the Course shall be entitled to a Certificate of having attended "regularly."

6. That those who shall have attended *one-half* of the Course, shall be entitled to a Certificate of having attended "but not regularly."

7. That in those Courses of the Faculty of Arts, which consist of *three Terms*, attendance on *the whole* of the Lectures delivered during any two of those Terms, shall be considered as equivalent to attendance on *two-thirds* of the whole Course; and attendance on *three-fourths* of such Lectures, as equivalent to attendance on *one-half* of the Course. But that it shall be competent to the Professor to make allowance for an occasional absence arising from illness, or other unavoidable accident.

8. That the Clause, No. 7, shall not apply to Medical Students attending the Courses in the Faculty of Arts.

9. That three separate forms of Certificates of attendance shall be prepared, leaving the words "very regularly," "regularly," and "but not regularly," *printed* severally in each.

10. That copies of the foregoing regulations shall be printed on the back of each Certificate.

Robert J. Kenny, Registrar.

STATUTE of PUNISHMENTS.

1. Any Student guilty of any of the following offences, shall be liable to expulsion from the College; but it shall be competent to the Council, should they deem it more conducive to the discipline of the College, and the reformation of the offender, to impose some lighter punishment for the same.

1. Habitual neglect of attendance for Divine Worship, at such Church or Chapel as shall be approved by his Parents or Guardians.
2. Habitual neglect of attendance on the religious instruction provided for Students of his Church or denomination, in the Licensed Boarding House in which he may reside.
3. Immoral or dishonest practices.
4. Treasonable or seditious conduct.
5. Drunkenness.
6. Grievous offences against College rules or discipline.
7. Wilful and serious injury to the property of the College.

2. For all offences and violations of the Statutes, Rules, and Ordinances of the College, of a less grievous nature than the preceding, the Council shall have power to inflict such fine or other punishment as shall appear to them suitable to the same.

3. No Student who has been expelled from any of the Queen's Colleges in Ireland, shall be allowed afterwards to enter or pursue his studies in any other of the said Colleges.

RULES of COUNCIL regarding the General Discipline of the College.

1. It shall be the duty of every Professor and Officer of the College, and more especially of the Deans of the several Faculties, to assist in maintaining discipline, and in repressing by admonition and reproof, misconduct and disorder among the Students.

2. If any Student shall prove inattentive to the admonition and reproof of any Dean, Professor, or Officer, it shall be the duty of such Dean, Professor, or Officer, to report the offender to the Vice-President.

3. If the Vice-President shall deem it necessary or desirable, he shall summon the offender to appear before the Council at its next subsequent Meeting, when he shall be solemnly admonished by the President or acting Chairman of the Council.

4. If any Student shall have been summoned before the Council a second time during the same Term, he shall forfeit the Term, and be excluded from the College during the remainder thereof.

5. If the offence for which any Student shall be summoned before the Council be of a grave character, it shall be competent to the Council to suspend him during either one or two Sessions, according to their discretion.

6. It shall be the duty of the Steward and Porters of the College, to report to the Vice-President any instances of disorder or breach of discipline which they may observe.

By Order of the Council,

April 16, 1850. FRANCIS ALBANI, Registrar.

REPORT of DEAN of RESIDENCES for the ESTABLISHED CHURCH.

The See House, Cork, Dec. 23, 1856.

SIR,—In reply to your communication of the 5th instant, I beg to acquaint you, for the information of the President, that there were not any Students in the Licensed Boarding Houses under my charge during the Session, 1855–56.

I am, Sir, your obedient servant,

R. J. Kenny, Esq. LOUIS PERRIN.

REPORT of DEAN of RESIDENCES for the PRESBYTERIAN CHURCH.

Cork, December 6, 1856.

SIR,—I have to report that during the Session, 1855–56, there was only one Presbyterian Student, Mr. Cavet, resident in a Licensed Boarding House. He was attentive to his religious duties throughout the Session, and conducted himself with the utmost moral propriety.

I am, yours very truly,

WILLIAM MAGILL.

To Sir Robert Kane.

REGULATIONS to be observed by PROPRIETORS of HOUSES LICENSED by the PRESIDENT for the residence of Students of QUEEN'S COLLEGE, CORK, and to be observed under penalty of withdrawal of License.

1. The proprietor shall, on the first day of each Term, make a return to the Registrar of the College, of the names of all Students residing therein.

2. In case of Students commencing to reside during a Term, their names shall be reported to the Registrar immediately on their entering into possession of their rooms.

3. The proprietor shall, in all cases, arrange that each Student shall have a separate bed, and separate means of cleanliness, and shall in case of more than one person sleeping in the same room, lodge with the Bursar of the College a plan of such room, with the arrangement of beds proposed.

4. No apartment shall be used as a bed-room unless provided with chimney flue or other satisfactory provision for ventilation.

5. The residences licensed for Students shall be at all times open to the inspection of the President or of any Officers of the College delegated thereto by the President.

6. The Students resident in licensed houses are required to return to their residence for the night, by nine of the clock in Winter and Spring Terms, and ten of the clock in Summer Term; and violation of this rule, except on permission granted by the Registrar of the College, will be punished by the Council, to whom the proprietor of the house is hereby bound immediately to report any such violation of the rule.

7. All playing at games of chance, cards, or dice, is absolutely forbidden, under penalty of withdrawal of the license.

8. The introduction of spirituous liquors by Students into licensed houses is strictly forbidden; and any case of intoxication occurring in a boarding-house must be immediately reported by the proprietor, under penalty of withdrawal of the license.

9. The proprietor is bound immediately to report to the Registrar of the College, for the information of the Council, any quarrelling, or political or polemical disputations, or any acts of immorality or misconduct, committed by any Students belonging to his boarding-house.

10. The frequenting of smoking-rooms, taverns, or public-houses is strictly forbidden to Students, and proprietors of boarding-houses are required to report to the Registrar of the College, any case of such being practised by Students belonging to the boarding-houses.

11. The proprietors of boarding-houses shall furnish every facility of access to the Reverend the Deans of Residence, to communicate with, and afford moral and religious aid and instruction to the Students of the respective religions resident in boarding-houses, and shall provide an apartment for morning and evening prayer, should such be required by the Reverend Deans or any of them; and shall co-operate in the arrangements of the several Deans of Residence, for the attendance of Students on public worship.

12. The proprietor of each boarding-house shall obtain from each Dean of Residence, a copy of the regulations for moral and religious discipline, proposed by the Dean and certified by the President, as not interfering with College business, and shall post up said copy of rules in some suitable part of the residence, and direct the attention of Students to the same.

Signed, by Order of the President,

FRANCIS ALBANI, Registrar.

THE REPORT

OF THE

PRESIDENT OF THE QUEEN'S COLLEGE, GALWAY.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

In laying before your Majesty a Report on the condition and progress of the Queen's College, Galway, I am happy to be able to state that, in the last three Sessions, as well as in that during which I write, a continued increase has taken place in the numbers entering the College and attending its lectures. In every Session since the opening of the College, with one exception, the numbers availing themselves of the instruction afforded by the Professors have increased; and I cannot now entertain a doubt that each year, as it dispels those misconceptions which so largely pervaded the public mind on the subject of these Colleges, will exhibit a growing disposition on the part of the people of this province to secure the advantages thus offered to them, and to signalize their adhesion to united education and religious equality by supporting institutions founded on these principles.

It will be seen, by a reference to the following tables, which give the numbers and religious persuasions of the Students, that united education has been really carried out in this as in all the Queen's Colleges; and that the numbers continue to represent, in just proportion, those classes of the several persuasions who look for Collegiate instruction. It is gratifying to be able to add that, since the opening of the College, not a single circumstance has occurred to interrupt the harmony which subsists among the Students of all denominations:—

NUMBERS and RELIGIOUS PERSUASIONS of STUDENTS who have entered the QUEEN'S COLLEGE, GALWAY, in each year from its opening, October, 1849, to the present date, December, 1856.

The following Returns give the numbers of Students attending the different classes, and the number of lectures delivered by the Professors in each year since the opening of the College. A reference to the latter table renders it unnecessary for me to expatiate on the zeal and assiduity with which the Professors have discharged their duties. It would indeed be impossible to overestimate the continued devotion of these gentlemen to the interests of the Students and the College:—

Having now stated the numbers and religious persuasions of the Students who have joined the College since its opening, as well as of those who, during the last three Sessions, have attended the teaching of the Professors, I am again compelled, as in all my former Reports, to refer to the peculiar circumstances which have retarded, and which, until removed, must still retard, the progress of this College, in order that a just estimate may be formed of the way it has already made; and still more, that the attention of the Government and the Legislature may be at last awakened to what the interests of education, as far as regards the upper and middle classes, so imperatively demand in this province.

First, then, as regards the progress of the Institution, I have only to repeat the observations which I made on this subject in my Report for the Session 1851–52.

"On the wealth and population of the neighbourhood in which an institution of "this kind is situated, its progress, especially at its opening, must almost entirely "depend. Where these exist to any great extent, and when to them is added a "strong desire for knowledge on the part of the people, nothing can retard its "quick and steady progress. In the case of the Galway College these elements "of success exist in a very small degree. The population of the town of Galway "is less than a fifth of that of Belfast or Cork, where the sister Colleges are "placed. In wealth there can scarcely be a comparison between the localities, "while any very ardent zeal for knowledge has still to be created here. It will "easily be seen that an institution placed in such a locality, must depend for "support upon resources not local, and that the bulk of its Students must be such "as are not resident in its vicinity.

"The system of instruction pursued in the Queen's Colleges, which requires "constant attendance upon the Lectures of the Professors for at least two-thirds "of the academic year, necessarily subjects those Students, who come from a "distance, and who, in the present instance, constitute the large majority, to the "expense attendant on residence near the College for that period. Indeed, "unintermitting attendance on the Lectures of the entire Session—a period of "more than eight months—is necessary, to enable the Student to master the "numerous subjects of study contained in the curriculum. The expense which "this imposes on the Students, when added to the fees payable to the College and "to the Professors, swells his expenditure far beyond what the circumstances of "this province enable a large portion of its inhabitants to meet. I am informed, "that the expenses of the Queen's Colleges are considered too high even for the "fortunate condition of the province of Ulster, swarming, as it is, with popula- "tion, teeming with wealth, and glowing with a noble ardour for improvement. "If this be so, it is decisive as to the utter disproportion that exists between these "expenses and the circumstances of the province of Connaught."

The advantages possessed by Colleges founded in such towns as Dublin, Cork, or Belfast over one situate in Galway, will appear from the following table, in which not only the population of these places is compared, but, what is of equal importance, the numbers of pupils attending classical or preparatory schools in each locality is given. These returns are taken from the able Report of the Census Commission for the year 1851—a document which has thrown fresh light on every branch of the Statistics of Ireland:—

	Population.	No. of persons attending Classical Schools.
Dublin,	258,361	1,751
Belfast,	100,301	799
Cork,	83,745	418
Galway,	23,605	79

It is evident, from the above table, that the Galway College can obtain but little support from its immediate vicinity, whether we regard population or the means of preparatory instruction; and it will be seen that, throughout the province, an obstacle of the most formidable nature continues to oppose its progress and contract the sphere of its utility. This obstacle consists, not only in the defective condition, but in the almost total want of preparatory classical schools. In the last Report I had the honour of submitting, I stated that every day's experience tended to show how entirely the interests of education had been neglected in the province of Connaught, and how imperatively necessary it had become, by the establishment of really efficient schools, to diffuse more widely the advantages of knowledge; that had the foundation of the Queen's College done nothing more than call attention to the lamentable state of the district, as regards education, it would go far to justify the policy of those by whom it was established; that but few schools, and those but thinly attended, existed; and that a complete reform in this important concern was required to elevate the province to a rank with the rest of the empire, and to give full scope to the action of the Queen's College. The publication of the Report of the Census Commission, containing the following return of the numbers attending classical schools in each of the four provinces, bears out but too fully the truth of the above observations:

	No. of persons attending Classical Schools.
Leinster,	6,150
Ulster,	2,765
Munster,	2,289
Connaught,	690

From the two last tables, it appears that the population of Dublin exceeds by more than 50,000 that of Belfast, Cork, and Galway taken together; and that the numbers attending classical schools in the metropolis exceed by 455 the entire number of those attending similar schools in the three towns where the Queen's Colleges are located. Some estimate may, from this, be formed of the unfavourable circumstances with which provincial Colleges have to contend; while the difficulties peculiar to the Western College may be judged of by the fact, that not only does the population of Galway fall short of that of Belfast by more than 80,000, but that the numbers attending classical schools in the latter town exceed by 109 the total number of pupils attending classical schools in the entire province of Connaught.

In the face of so many discouraging facts, it may appear hazardous to institute any comparison between the numbers of the Students of the Galway College and those of the Colleges of Belfast and Cork, as it is needless to allude to the enormous advantage which these latter institutions derive from the wealth and population of the great towns to which they belong, and from the educational zeal which abounds in their localities. Nevertheless, such a comparison can be made without disparagement to the Western College, even though the standard adopted be the population of the provinces, and not—what would certainly be more fair—the population of the towns in which the Colleges are situate. The following table gives the population of Ulster, Munster, and Connaught, and the numbers who have matriculated in each of the provincial Colleges since their opening :—

Provinces.	Population.	Numbers of Matriculated Students who have entered the Queen's Colleges from their opening to the present time (December, 1856).	
Ulster, . .	2,011,756	Belfast College, .	392
Munster, . .	1,857,412	Cork College, . .	424
Connaught, . .	1,010,211	Galway College, .	258

Thus, while the population of Connaught is but one-half of that of Ulster, the numbers who have matriculated in the Galway College amount to two-thirds of those who have joined the College of Belfast, though the former institution has had to encounter a formidable and protracted opposition from which the latter has been happily free; and even as regards the Southern College, situate in a town and province famed for their enthusiastic devotion to knowledge, the number of her Students exceeds those of Galway in a somewhat less proportion than the population of Munster does that of Connaught.

Let me now consider the numbers of Students, whether matriculated or non-matriculated, who were in actual attendance upon the lectures of the Professors in the three Colleges during the Session just expired, viz., Session 1855–56. In the important class of non-matriculated Students, Galway can, of course, enter into no comparison with Belfast and Cork. This class, consisting of persons who attend lectures on some particular subjects, but who, beyond that, have no further connexion with the College, must chiefly come from the surrounding district, and will depend upon the number of its inhabitants. Accordingly, in considering the united classes of matriculated and non-matriculated Students, it will be necessary to look to the population of the towns in which the Colleges are placed, to form a just opinion of their progress.

The following table gives the number of Students attending lectures in the Queen's Colleges during the last Session, 1855–56, and the population of the towns to which they belong :—

	Population, 1851.		Matriculated Students.	Non-Matriculated Students.	Total Number of Students in attendance on Lectures.
Belfast, . .	100,301	Belfast College, .	119	74	193
Cork, . .	83,745	Cork College, .	149	13	162
Galway, . .	23,605	Galway College, .	78	7	85
			346	94	440

The number of Students in attendance in Galway in the present Session (1856–57), up to the time at which I write, is 94, of whom 88 are matriculated, and 6 non-matriculated.

The above table gives the entire number of Students who attended Lectures in the three Colleges during the past Session. I cannot help expressing my belief that the result is satisfactory, and will convince every reasonable man that these institutions—even in the short period of their existence—have already attained a useful and secure position. Four hundred and forty Students attending the teaching of such men as fill the Professorial chairs, is a feature of no slight importance in a country where, until the last few years, attendance on College lectures was the exception, not the rule.* These Colleges, it must be remembered, have all had to encounter, not only the depression of the times, but the almost insurmountable obstacle which the want of preparatory schools opposes to their full development; and I cannot doubt but that, on looking at the circumstances of peculiar difficulty which beset the Galway College, its progress will be considered to have fully kept pace with that of those Colleges which have been founded in more favourable districts.

While, however, claiming this conclusion from every candid mind, it is far from my intention to assert that these institutions have as yet fulfilled the great end for which they were designed, or that their operation might not be rendered far more extensive and useful. It is my duty to point out those circumstances which retard the progress of, at least, the College with which I am connected, and to suggest the means for removing the obstructions: to provide these means is the duty of the Legislature, the Government, and other authorities. These retarding circumstances are—First, the expense of attending the Colleges to all Students not residing permanently in their immediate neighbourhood—an expense far beyond the reach of the middle class; secondly, the want of intermediate schools; and thirdly, the extent of the curriculum required by the Queen's University from all who look for a degree in the Faculty of Arts.

For Students whose permanent residence is in the vicinity of the College, the expense of attending it is moderate, and fully within the reach of all aspiring to Collegiate education and University degrees. This expense consists, solely, of the fees to the Professors and the College, the fee for the University degree, and whatever cost may be incurred by residing in Dublin during the time occupied by the degree examination. But when to this is added the large and additional expense imposed upon all Students not residing near the College, by the rule which requires attendance on the lectures for, at the least, six months in each of three Sessions, the cost of a degree swells up to an amount which the large majority of the middle class is utterly unable to meet. I am convinced that an A.B. degree cannot be obtained in the Queen's University by such Students, at less than one-fourth more than what the same degree costs in the Dublin University. How completely this closes the Colleges against a large portion of the middle class will appear from the following considerations; and, when it is remembered that this is the class for whose benefit these institutions were founded, the importance of the subject will be admitted by all.

It appears from the Report of the Dublin University Commission (page 56), that the numbers entering that far-famed University have diminished, during the last quarter of a century, in a most remarkable manner. From 1830 to 1834, the average annual entrance was 433; while from 1850 to 1852, it was but 271. I perceive by returns lately furnished by the Bursar of Trinity College, that the diminution still continues, and that, for the last five years, the average entrance has been 261. This statement, striking as it is, gives but an inadequate idea of the falling off that has taken place, as, to use the words of the Report, "The

* With respect to attendance on lectures in the Dublin University, the Commissioners say in their Report—"It is stated that the attendance on lectures *has increased most remarkably*, and yet the number in attendance still forms but a moderate proportion of the entire number of students.

"In Michaelmas, 1851, the total number attending lectures was about 411, and of these, only 313 were allowed credit for their attendance. In Hilary, 1852, the total number attending lectures was 361, of whom only 247 were allowed credit for attendance; and in Trinity, 1852, but 93 got credit for attendance on lectures. The small attendance on lectures arises from the circumstance that Degrees in Arts in the University of Dublin can be obtained by passing examination only, without any residence or attendance on lectures in Dublin."—*Dublin University Commission Report, pages* 68 *and* 212.

The minimum attendance on lectures required by the Queen's University is two terms, or six months in each Session; almost all, however, except the Medical Students, attend lectures for the entire Session.

number of Students who come from England, Scotland, and Wales, amounting to about fifty entering each year, remains undiminished." Accordingly, the number of Students from Ireland entering the Dublin University has diminished, in the last twenty-six years, from an average annual entrance of 383 to one of 211.

Into the causes of a decrease, so much to be deplored by every friend of enlightenment, the Commissioners have accurately inquired, and have come to a conclusion, for reasons which appear to be irresistible, that the diminution arises from the inability of the gentry and clergy to meet the expense of graduating in the Dublin University. The Commissioners proceed to recommend several measures—as, for example, the abolition of the stamp duties on degrees—to bring the expense of the Dublin University within the reach of the gentry and clergy. When, then, I state that the expense of an A.B. degree in the Queen's University considerably exceeds that for which a similar degree can be obtained in the Dublin University, I have, I think, demonstrated that the expense of the Queen's Colleges closes them against a large majority of that middle class for whose elevation and enlightenment they were peculiarly founded.

On the formidable nature of the obstacle thus opposed to the progress and utility of a College which, like that of Galway, must depend for support upon Students coming from a distance, and therefore subjected to this large expense, it is unnecessary to descant. Wholly to obviate the difficulty, so long as our present system is enforced, is plainly impossible. The cost of University education, where residence is insisted upon, can never be brought down to a level with the expense incurred under a system in which it is discretionary. Still, much might be done by the adoption of a measure, simple, easy, and actually contemplated by the Act founding the Colleges—I mean the establishment of Halls or Boarding-Houses, where the Students could reside at a moderate cost. Were such Halls established, a far more extended operation would be given to a system enforcing attendance on lectures—a system which, it must be remembered, the Dublin University has always hesitated to adopt, and which the Commissioners appointed to inquire into that institution have, while fully acknowledging its excellence, declined to recommend. As it is, this system is carried on in the Queen's Colleges under the most unfavourable circumstances. Residence is enforced upon a class of Students, of comparatively narrow means, in institutions where no facilities whatever for residence have been provided, while it is left optional to a more affluent class in an institution which offers to her Students accommodation at once suitable and inexpensive. It is not now for the first time that I have alluded to a subject which has continually occupied the thoughts of every member of this College. In every Report I have put it prominently forward, and regret that, as yet, it has received no attention from the Government. I now beg to repeat some of the observations which I offered soon after the opening of the College, and which every year's experience serves but to confirm.

"A measure, contemplated by the Act which founded these institutions, would "meet, in a great degree, the difficulty caused by the expense, and extend im- "measurably the advantages of the College—I mean the establishment of Halls "or Boarding-Houses, where the Students could reside at a moderate cost. No "very large outlay would be required for a purpose which, I feel convinced, "would double the utility of all that has been hitherto expended in the founda- "tion of this noble institution.

"The advantages to be derived from such a measure would not be confined to "a diminution of the Student's expenses alone. The extreme inconvenience of "living at a distance from the College, where he must attend lectures at different "hours of the day, would be removed; the comfort and accommodation which "well-established Halls would afford him, as compared with many of the places "where he is at present compelled to reside, cannot be over estimated; while the "fact of being always under the watchful eye of the College authorities, would "afford an additional security for the rectitude and propriety of his demeanour "and conduct."

Next in importance to the obstacle opposed to the progress of the College by the expense of attending it, is the want of preparatory or classical schools. The cry for reform in this particular has proceeded from every portion of the country. The able pamphlet of Dr. M'Cosh has exhibited the backward condition even of Ulster as regards these schools. The state of Connaught in this particular is

sufficiently described by one fact recorded in the above tables. In the province of Connaught, containing one million of inhabitants, the classical schools are attended by 625 pupils!

Comment on such a state of things, unparalleled in any other civilized country, would be superfluous; nor can I doubt but that it must soon occupy the attention of the Government.

The want of preparatory schools naturally leads to the consideration of the curriculum required by the Queen's University from all who look for the degree of A.B. This curriculum I believe to be preposterously extensive, and feel sure that it has proved a stumbling-block to the progress of the Colleges. On this subject it will, I believe, be sufficient to compare the curriculum required by the Queen's University with that required by the Dublin University, to show the extravagant extent of the former, and the futility of attempting to enforce it in a country destitute of those higher schools, in which alone such a groundwork of knowledge could be acquired as might enable Students to master a course of studies so large and so varied in its character. The curriculum of Trinity College is entitled to all attention, not only as one adopted and continued in that illustrious institution, but because it has lately been submitted to the consideration of men whose opinion on this subject must command immediate attention—I mean the Commissioners appointed by your Majesty to inquire into the Dublin University. These great authorities have pronounced the curriculum of Trinity College to be very extensive, and have declined recommending any addition to it beyond the introduction of a modern language. I will now compare the curricula of the two Universities, and leave it to the common sense of the country to determine whether some reduction is not required in the crowd of subjects which the Queen's University demands, and whether one cause of the small number of degrees that have been given by that University in the Faculty of Arts is not easily to be found in the vain endeavour to force upon the country a standard of education for which, as yet, it is altogether unfit.

CURRICULUM OF DUBLIN UNIVERSITY.

First Year.
1. Latin.
2. Greek.
3. Mathematics.

Second Year.
Latin.
Greek.
4. Logics.
Mathematics.

Third Year.
Latin.
Greek.
Logics.
5. Natural Philosophy.

Fourth Year.

First Course.	Second Course.	Third Course.	Fourth Course.	Fifth Course.
Astronomy of 3rd Year.	Ethics.	Physics of 3rd Year.	Experimental Physics.	Classics.

(See report of Commissioners, pp. 125, 212, 213.)

In the fourth year four of the *five* courses must be taken by students *in general* (some are only required to take three). But *three* of these courses, viz., the first, third, and fifth, are subjects which have already been studied: accordingly, a Degree is obtained in the Dublin University by the study of *six* subjects.

CURRICULA OF TRINITY COLLEGE AND THE QUEEN'S COLLEGES COMPARED.

Subjects compulsory in both:—
Latin.
Greek.
Logic.
Mathematics.
Natural Philosophy.

Additional subjects compulsory in Trinity College.	Additional subjects compulsory in Queen's Colleges.
Ethics.	Chemistry. Zoology. Botany. Physical Geography. A Foreign Modern Language. English Language. English Literature. History. Metaphysics, or Jurisprudence and Political Economy.
The curriculum of Trinity College extends over *four* years; that of the Queen's Colleges, over *three*.	

The Dublin University Commissioners declare its curriculum to "be very extensive." And having recommended the introduction of a Modern Language into the Degree Examination, pronounce the curriculum to be sufficiently extensive. When it is remembered that far better educated students resort to Trinity College than to the Queen's Colleges, and that four years are given to the study of its curriculum, the necessity of reducing that of the Queen's Colleges will, I should think, appear evident.

The Commissioners, likewise, recommend elementary works on political economy and law to be introduced into the curriculum, but not to be compulsory on the student.

QUEEN'S UNIVERSITY.

PRESENT CURRICULUM.

First Year.
1. Greek.
2. Latin.
3. Mathematics.
4. A Foreign Modern Language.
5. English Language.

Second Year.
6. Logic.
7. Chemistry.
8 & 9. Natural History (including Botany).
The Higher Mathematics, or Greek and Latin.

Third Year.
10. Natural Philosophy.
11. History.
12. English Literature.
13. Physical Geography.
14. Metaphysics, or
14. Jurisprudence and
15. Political Economy.

To obtain a Degree in the Queen's University the study of *fourteen* subjects, at the least, is required, while but *six* subjects are required in Trinity College.

Such, then, I believe to be the measures which would give extended utility to the Colleges, and enable them to accomplish the end for which they were instituted, viz., the education of the middle class. The first—more especially required for the Western College—the establishment of Halls, where the Students could reside at a moderate cost; a measure requiring but a small expenditure, and sure to be repaid with usurious interest by the increased efficiency it would give the Colleges. The second, the foundation of intermediate classical schools, the want of which, as universal as it is discreditable, as pernicious to the best interests of the community as it is obstructive to the progress of the Colleges, no Government, careful of the public improvement, can any longer regard

with indifference. The third—the modification of the course of studies required by the Queen's University in that faculty, upon the success of which the character of a University must mainly depend—the Faculty of Arts; a course which every new degree examination only the more emphatically demonstrates to be unsuited to the present circumstances of the country, and which must either keep up the standard of the University at such a height as to render it unapproachable, or must lower and degrade it, by making degrees the reward of superficial, not of accurate, knowledge—of shallowness, not of depth.

Having thus pointed out the causes which still continue to limit the beneficial operation of the Colleges, and having expressed regret that some of them have not yet received the attention of the Government, it now becomes my grateful duty to acknowledge the ample remedy which has been applied to one of our most pressing wants. An annual sum of £1,600 has been recommended by the Treasury, and granted by the Legislature, to each College, to meet its current expenses, and to put the several departments in a condition suited to these noble institutions. That grant has been in operation for only two years, and, I think, I cannot better express the obligation it has conferred upon our College than by giving a short description of the condition into which it has enabled us, even in so short a period, to bring the several departments.

The Library.—I am happy to bear testimony to the great advantages which have resulted to the College from the extension of its Library, which the annual grant has enabled it to make.

The Library is, of course, still far from being complete, but it is much more available for the purposes of study than might be imagined, from the number of volumes it contains, as the Professors in the various departments have been careful, in selecting books, to confine themselves to works of practical utility, omitting those which are merely curious. I may safely say that—thanks to the wise liberality of the Legislature—the Professors have now the means of pursuing their own studies, so as to keep pace with the progress of knowledge; while the Students, by having access to the best text-books, are enabled to acquire for themselves, with facility and exactness, what before could only be communicated, laboriously and imperfectly, through oral teaching in the lecture-room.

Of this privilege they have not been slow to avail themselves. It is satisfactory to be able to state, what a reference to the day-book of the Library will confirm, that the Library is frequented by a much larger number of readers, proportionately to the number of Students, than are usually found resorting to College Libraries, and the stillness and order which prevail show that the readers are evidently bent upon the acquisition of knowledge.

The state of the lending department of the Library is daily becoming more satisfactory. The Council of the College has been enabled considerably to extend it during the past year, and it is hoped that the precautions which have been taken, with regard to the issuing of books, will secure to those who have the privilege of borrowing the largest amount of accommodation that is consistent with the efficiency of the reading department and the preservation of the books.

The General Museum.—The Zoological Department of the Museum contains specimens illustrative of 115 genera of foreign mammalia, and 152 genera of exotic birds: also several rare and interesting skeletons.

The above were obtained by purchase from the valuable collection of the Zoological Society of London.

The collection of foreign shells is considerable; and the local fauna is well illustrated as far as birds, shells, and crustacea are concerned.

Although the primary object of the collection is to illustrate the lectures on natural history, it has, nevertheless, become a source of great interest to many in this remote locality—otherwise excluded from all acquaintance with the wondrous forms of animal life.

Aquaria are in constant operation for the display of marine animals.

The Botanical Department consists of a collection of dried British plants.

The Mineralogical and Geological Department of the General Museum (inclusive of other requirements for the Chair of Geology) has been formed at a cost of about £400; and comprises nearly 400 specimens of fossil plants, illustrating the various geological periods; 1,000 species of fossil invertebrata, characteristic of the primary, secondary, and tertiary formations; 150 specimens

of vertebrata, 80 of which are casts presented by the Honourable the Directors of the East India Company; 200 igneous, aqueous, and metamorphic rock specimens; and upwards of 1,000 mineralogical specimens.

The greater portion consists of choice examples, selected with the greatest care. The specimens are, for the most part, mounted and arranged according to the latest systems; and every attention has been paid to labelling them as fully as possible.

The Museum of Physical Apparatus belonging to this College has been formed solely with a view to its educational uses. Accordingly, the instruments selected have been such as will, in the opinion of the Professor, most fully illustrate the lectures given on the mechanics of solids and fluids, on astronomy, and on the properties and effects of heat, light, and electricity.

The collection embraces a beautiful series of optical apparatus, by Dubosq of Paris; a serviceable collection of electrical apparatus; a fine air-pump, with its usual accessories; some good educational models; most of the ordinary mechanical and hydrostatical apparatus; and some minor instruments.

This collection owes many of its most useful parts to the recent liberality of the Legislature; and so efficient an auxiliary has it already become to the teaching of the Professor, as to have enabled him to give extensive courses of instruction in physical research to such of the more diligent Students as wished to attain proficiency in that branch of knowledge.

The Medical Museum contains several hundred pathological specimens, including the collection of a late distinguished teacher; portfolios of pathological drawings; a series of osteological specimens, including numerous skeletons; preparations exhibiting the process of dentition and the growth of bone; models in wax and papier maché; a cabinet of microscopic preparations, illustrative of structure, human and comparative; two fine compound microscopes, with apparatus complete; and several mechanical appliances required for the preparation of specimens of anatomy, or to illustrate physiological theories.

The Museum of Materia Medica and Medical Jurisprudence contains 875 specimens, comprising—

1. Pure and spurious medicines of the British and Foreign Pharmacopœia, and some patent medicines.
2. Some hundreds of dried and prepared medical plants.
3. Ores and minerals furnishing medicines; vegetable and mineral poisons, and appropriate tests and antidotes.

A small collection of chemical apparatus for toxicological and pharmaceutical demonstrations.

Numerous diagrams to elucidate chemical reactions, crystallography, &c.; coloured botanical plates of medicinal plants.

With the above there is the large and valuable collection of plants, minerals, crystals, &c., in the General Museum, available for the Professors' lectures.

Hospital Accommodation.—The County Galway Infirmary and Town Hospital afford the Medical Students attending the College the means of obtaining practical knowledge in both Medicine and Surgery. They are visited every morning by Professors of the College, who deliver Clinical Lectures. In addition to this hospital accommodation, the Guardians of the Galway Union have permitted the Medical Students to visit their hospital under the superintendence of the surgeon to the institution, who is one of the Professors of the Faculty of Medicine. The Students now enjoy the advantage of observing daily the Medical and Surgical treatment of TWO HUNDRED PATIENTS.

In reference to the Medical School of the College, it is right to say that its progress was most materially crippled for a time by the want of sufficient hospital experience. It will be seen by the above paragraph that this difficulty has been entirely overcome, and that the Medical School now possesses every facility for giving the highest as well as the most practical instruction.

The Laboratory and Chemical Museum.—The Laboratory has accommodation for eight Students, each Student having a separate table to work at. The tables are provided with presses and drawers for containing apparatus, and are supplied with water, gas, and the usual reagents employed in analysis.

The Laboratory is also provided with balances for the more advanced Students, and is well furnished with furnaces and sand baths for metallurgic and distillatory

experiments; it contains likewise many other conveniences for analytical and experimental chemistry.

The Chemical Museum contains numerous specimens illustrating the native and manufactured productions of this country, and also some apparatus and diagrams for the illustration of the lectures.

This department is at present incomplete, but additions are frequently made to it.

Civil Engineering Department.—The condition of this department is much improved. It now contains a very efficient stock of Surveying Instruments, and a most useful, though as yet small, collection of Models and Diagrams, to which we are making yearly additions.

The Agricultural Museum is at present in excellent order, being well supplied with useful and necessary implements, plates of farm animals, &c. These are found not only necessary to the education of the Students, but beneficial to the locality, where the uses of such implements are rarely known.

The Botanical Garden contains a collection of medico-economic plants, and a large number of British plants.

I cannot conclude this Report without alluding to the great benefit conferred upon the College by the present Lord Lieutenant, in foregoing his undoubted patronage in the cases of the Librarianship and Registrarship, lately vacant, and in opening these offices to competition among the Graduates of the Queen's University. I am glad to be able to state that the result of this measure has been as successful, as the motives in which it originated were disinterested and gracious.

REPORT.

TO HIS EXCELLENCY GEORGE WILLIAM FREDERICK, EARL OF CARLISLE, K.G.,

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,

I HAVE the honour to submit herewith, as directed by the Act 7 & 8 Vict., c. 81, sec. 56, in order to their being laid before Parliament, General Abstracts of the Marriages registered in Ireland from the 1st of January to the 31st of December, 1855.

These Abstracts do not include Marriages by the Roman Catholic Clergy, all such being specially exempted from registration under the provisions of Section 3 of the Act referred to.

The number of Marriages registered in each year from 1845* to 1855, distinguishing those solemnized according to the rites of the Established Church from those celebrated according to other forms, is given in the following Table:—

Years ended 31st December	MARRIAGES. According to the Rites of the Established Church.						Not according to the Rites of the Established Church.						Total Marriages.
	Special License.	License.	Banns.	Registrar's Certificate.	Not stated by which of the foregoing Forms.	Total.	In Registered Presbyterian Meeting-houses.	In Registered Buildings.	In the Registrars' Offices.	Society of Friends.	Jews.	Total.	
1845 (nine last months),*	4	2,630	732	40	712	4,118	1,586	39	358	11	2	1,996	6,114
1846,	5	3,910	992	74	779	5,760	2,712	67	797	8	–	3,584	9,344
1847,	6	2,897	925	66	427	4,321	1,777	62	772	10	1	2,622	6,943
1848,	8	3,529	1,257	118	401	5,313	2,313	87	1,320	14	1	3,735	9,048
1849,	2	3,572	1,384	108	258	5,324	2,440	67	1,647	13	2	4,169	9,493
1850,	1	3,710	1,431	108	137	5,387	2,504	85	1,789	16	–	4,394	9,781
1851,	4	3,719	1,341	64	73	5,201	2,517	80	1,527	13	1	4,138	9,339
1852,	4	3,946	1,312	39	64	5,365	2,547	92	1,475	8	–	4,122	9,487
1853,	6	4,173	1,260	47	76	5,562	2,890	100	1,626	19	–	4,635	10,197
1854,	8	4,095	1,015	25	45	5,188	2,701	77	1,447	11	2	4,238	9,426
1855,	6	3,867	1,002	20	27	4,922	2,435	79	1,316	12	1	3,843	8,765

The Marriages registered in 1855 were 661 (or 7 per cent.) under the number registered in the previous year; in the Established Church they decreased 266, or 5·1 per cent.; in the Presbyterian Church, 9·8 per cent.; and in the Registrars' offices the diminution amounted to 9 per cent. under those returned in 1854.

The following Table shows the number and the increase or decrease of Marriages between 1854 and 1855, also the mode in which the Marriages were performed:—

Mode in which Marriages were performed.	Marriages. 1854.	1855.	Increase in 1855.	Decrease in 1855.	Decrease per Cent.
According to the rites of the Established Church,	5,188	4,922	—	266	5·1
In Registered Presbyterian Meeting-houses,	2,701	2,435	—	266	9·8
In Registered Buildings,	77	79	2	—	—
In Registrars' Offices,	1,447	1,316	—	131	9·0
Between Members of the Society of Friends,	11	12	1	—	—
Jews,	2	1	—	1	50·0
Total,	9,426	8,765	3	661 Net decrease.	7·0

* The Act 7 & 8 Vic., c. 81, came into operation on the 1st of April, 1845.

It is remarkable that, in the Provinces, the decrease in the number of Marriages in 1855, compared with 1854, is confined to Ulster,—an increase having taken place in Leinster, Munster, and Connaught. The decrease in Ulster amounted to 742 Marriages; and the increase in the other Provinces was as follows:—Connaught, 35; Leinster, 34; and Munster, 12—leaving a net decrease of 661 Marriages in the number registered during 1855. The counties in Ulster which show a diminution, are:—Antrim, 335; Down, 192; Armagh, 148; Tyrone, 54; Fermanagh, 25; Donegal, 16; Londonderry, 2. There was an *increase* of 21 in the number of Marriages in the county of Cavan, and of 9 in Monaghan. In Munster,—Cork and Kerry show a decrease; the former of 13, the latter of 11, in the number of Marriages registered; and Tipperary, an increase of 21; Limerick, 10; Waterford, 3; and Clare, of 2 Marriages. In Leinster,—there was a decrease of 31 Marriages in Dublin; 23 in Louth; 13 in Wicklow; 9 in Wexford; 3 in Carlow; and 2 in Kilkenny;—and an increase of 43 in Meath; 25 in Queen's County; 22 in Longford; 11 in Kildare; 9 in Westmeath; and 5 in the King's County. In Connaught,—there was an *increase* of 18 Marriages in Galway; 18 in Roscommon; and 16 in Sligo; and a *decrease* of 15 in Mayo; and 2 in Leitrim. Taking the Districts of Ulster, principally populated by Members of the Established and Presbyterian Churches, and which may be considered as the seat of the flax manufacture in Ireland, we find the following decrease in the number of Marriages registered in 1855, compared with 1854:—Antrim, 2; Armagh, 24; Ballymena, 110; Ballymoney, 47; Banbridge, 96; Belfast, 46; Coleraine, 16; Lisburn, 122; Lurgan, 162; Magherafelt, 7; Newry, 31; and Newtownards, 32. The causes of these diminutions cannot be satisfactorily investigated, as the total Marriages of the population are not registered. It is not, therefore, attempted to account for these changes; but should the number of unregistered Marriages have decreased in an equal proportion (7 per cent.), the circumstance would be remarkable.

The number of persons married under 21 years of age, of Widowers and Widows married, and of those who signed the Register Books with marks, during each year from 1848 to 1855, are shown in the following summary:—

Years ended 31st December	Total Marriages.	Not of Age.				Re-married.				Signed with Marks.			
		Men.	Rate per Cent.	Women.	Rate per Cent.	Widowers.	Rate per Cent.	Widows.	Rate per Cent.	Men.	Rate per Cent.	Women.	Rate per Cent.
1845 (nine last months),* .	6,114	345	5·64	1,192	19·50	665	10·88	340	5·56	1,189	19·45	2,223	36·36
1846, . . .	9,344	474	5·07	1,870	20·01	1,038	11·11	571	6·11	1,688	18·07	3,387	36·25

1848, . . .	9,048	391	4·32	1,584	17·50	1,274	14·08	703	7·77	1,797	19·86	3,387	37·43
1849, . . .	9,493	415	4·37	1,714	18·06	1,244	13·10	679	7·15	2,096	22·08	3,922	41·31
1850, . . .	9,781	489	5·00	1,776	18·15	1,329	13·58	754	7·71	2,427	24·81	4,384	44·82
1851, . . .	9,339	411	4·40	1,551	16·61	1,183	12·67	695	7·44	2,281	24·42	4,037	43·23
1852, . . .	9,487	429	4·52	1,629	17·10	1,199	12·63	664	6·99	2,493	26·27	4,235	44·64
1853, . . .	10,197	475	4·65	1,708	16·75	1,255	12·30	700	6·86	2,726	26·73	4,609	45·19
1854, . . .	9,426	473	5·02	1,647	17·47	1,148	12·18	601	6·37	2,457	26·06	4,105	43·55
1855, . . .	8,765	405	4·62	1,551	17·69	1,163	13·26	610	6·95	2,260	25·78	3,674	41·91

It will be seen that in 1855 there was a decrease in the proportion of male, and a slight increase in that of female minors married; an increase in the proportion of widowers and widows married; and a decrease in the proportion of both males and females, who signed the Register of Marriages with a mark.

The following Tables give the total number of Marriages in each province, for every year from 1848 to 1855, together with the counties and Registrars' districts in which Marriages are most numerous, also the numbers by quarters:—

* The Act 7 & 8 Vic., c. 81, came into operation on the 1st of April, 1845.

Granard,	9	1	–	10	Totals,	1,395	531	126	2,052

Compared with the similar table given in last year's Report, the above shows an addition of 14 Churches of the Established Church, 3 Registered Presbyterian Meeting Houses, and 4 Registered Buildings.

The Registered Buildings may be classified thus:—

Belonging to Wesleyan Methodists,	64
„ Reformed Presbyterians,	21
„ Baptists,	8
„ Independents,	14
„ Moravians or United Brethren,	4
Not stated,	15
Total,	126

The number of Licenses for Marriage issued by the Licensing Ministers of the several presbyteries during the year 1855 is given below.

Presbytery, or Synod.	Number of Licensing Ministers, on 31st December, 1855.	Number of Registered Meeting-houses on 31st December, 1855.	Number of Licenses issued.
1. General Assembly of the Presbyterian Church in Ireland,	91	484	2,333
2. Remonstrant Synod of Ulster,	9	26	64
3. Presbytery of Antrim,	3	10	28
4. Presbytery of Munster,	3	7	15
5. United Presbytery or Synod of Munster,	4	4	–
Totals,	110	531	2,440

781 Licenses for Marriage were granted by District Registrars in 1855.

On former occasions I had the honour of bringing under the notice of the Lord Lieutenant extracts from the Reports presented to Parliament by the Registrar-General in England, and by the Inspectors of Factories, representing the great inconvenience caused by the want of a general system of registration of Births, Deaths and Marriages in Ireland; and in my Third Report I gave, in an Appendix, an estimate in detail, showing the probable expense of such a measure, which it was calculated would little exceed a rate of one farthing in the pound on the Poor Law Valuation of 1851. Each year shows more forcibly than the preceding the great and growing necessity for such a measure; and in the Census of 1851, the Reports of which have been lately laid before your Excellency, the want of it was so strongly felt as to render it necessary to procure Returns from each family, in order to ascertain the number of Deaths which had occurred in Ireland during the previous ten years—a plan which must evidently be defective and inapplicable for the general purposes of registration.

In the Report on the International Statistical Congress, held in Paris in 1855, as given in the Sixteenth Annual Report of the Registrar-General in England, p. 108, Dr. Farr, who was appointed to attend the Congress, makes the following statement:—

"Ireland has no civil registry of births or of deaths, and the marriages of the Protestant part of the community alone are registered by the Registrar-General of Ireland. The statists of Europe hear of this defect with astonishment. It is in many ways injurious to the people of Ireland, as it renders the proof of their pedigree difficult; and when they have occasion to insure their lives, and even at other times, they are deprived of the readiest way of proving their age. The sanitary state of the country also remains imperfectly known. At the Census great expense is incurred in collecting from the living imperfect accounts of the numbers, ages, and diseases of the dead during the ten preceding years. A registrar-general and a registration staff already exist in Ireland; so all that is required is, that they should be enabled to do their work, and actually to register the births, deaths, and marriages of the population. The cause of the neglect of registration in Ireland is misunderstood; for by some it is viewed as a form of English oppression, by others it is ascribed to the opposition of the Roman Catholic priests. Now England has never offered any opposition to such a measure; and as civil registration exists in Belgium, France, and other Roman Catholic countries, as well as in England and Scotland, it has evidently in it nothing incompatible with the practice of the Roman Catholic Church. Such arrangements should be made as might prevent an interference with the income that the priest, under the voluntary system in Ireland, necessarily draws from marriages, baptisms, and burials."

Ireland being now the only portion of the United Kingdom in which the Births and Deaths of the inhabitants are not registered, and in which the Registration of Marriages is confined to a portion of the population, it is to be hoped that the Legislature may take the subject into its early consideration, and extend to this country the benefit of a general measure, such as has been in force in England for nearly twenty years, and in Scotland since the commencement of 1855, and which confers so many important advantages on the community.

I have the honour to be,

Your Excellency's most faithful servant,

WILLIAM DONNELLY,

Registrar-General.

The General Register Office,
Dublin, 1st September, 1856.

GENERAL ABSTRACTS.

1855.

ABSTRACT of MARRIAGES Registered in Ireland, under the Provisions of the Act 7 and 8 Vic., c. 81, during the Year 1855.

DISTRICTS.	MARRIAGES. According to the Rites of the Established Church.						Not according to the Rites of the Established Church.						TOTAL MARRIAGES.	Not of Age.		Re-married.		Signed with Marks.

REPORT.

TO HIS EXCELLENCY THE EARL OF CARLISLE, K.G., LORD LIEUTENANT GENERAL AND GENERAL GOVERNOR OF IRELAND.

13th September, 1856.

MAY IT PLEASE YOUR EXCELLENCY,

In the absence of the Earl of Clarendon, K.G., G.C.B., Chancellor of the Queen's University in Ireland, it becomes my duty, as Vice-Chancellor, in compliance with the Provisions of Her Majesty's Charter, to furnish to your Excellency the Report of its condition and progress since 1st September, 1855.

In accordance with the Ordinance of the 7th March, 1855, as printed in the Appendix to last year's Report, No. VI., the Examinations of that year for Degrees and Diplomas were holden between the 18th of September and 3rd of October, 1855; they were principally conducted by printed papers, copies of which are hereunto annexed. Appendix II.

At the close of the Examination, the several Candidates named in the accompanying lists were duly passed by the Examiners, for the Degrees, Diplomas, and Honors, attached to their respective names, all of which were accordingly conferred at a Public Meeting of the University, in St. Patrick's Hall, on the 11th October last. Your Excellency was graciously pleased to honour it with your presence, and an account of the proceedings on the occasion will be found appended to this Report, No. 1. Only three among the entire list of Candidates who presented themselves for Degrees, were found to be insufficiently qualified, and were consequently rejected, a circumstance indicating superior preparation in the general body of the Candidates as compared with the result of similar Examinations in former years. Appendix III. Appendix I.

The Ordinance regulating the Examinations for the current year is appended to this Report. Appendix IV.

The following papers, connected with the proceedings of this University, are also annexed, for your Excellency's information.

Appendix V. A return of Medical Schools which have reported to the Senate.

Appendix VI. Estimate for current year.

Appendix VII. Cash account for year ended 20th June, 1856.

Appendix VIII. List of Examiners elected 14th July, 1856.

Appendix IX. Return of the several meetings of the Senate since last Report.

I have the honour to be

Your Excellency's

Obedient and faithful Servant,

MAZIERE BRADY, *C.*,

Vice-Chancellor.

APPENDIX.

Appendix I.

Public Meeting of the Queen's University in Ireland, held in St. Patrick's Hall, Dublin Castle, on the 11th October, 1855.

A very large number of distinguished persons having taken their places in the Hall, the University entered it in procession, at three o'clock, in the following order:—

Candidates for Certificates of having passed first Medical Examination.
Candidates for Diplomas in Agriculture, Engineering, and Elementary Law.
Candidates for the Degrees of A.B., A.M., LL.B., and M.D.
The Examiners and Professors of the University.
The Secretary to the University.
The Senate.
The Vice-Chancellor.

Having taken their seats, the Vice-Chancellor rose, and, attended by the Secretary, proceeded to the entrance of the Hall, and thence conducted his Excellency the Lord Lieutenant to the chair set apart for him to the right of the Vice-Chancellor, who then addressed the assembly in the following terms:—

We are again assembled for the discharge of our annual duty—that of conferring on the students of the Queen's Colleges in Ireland the degrees to which those who have passed the examinations recently held in this hall have been considered entitled; and to distribute among the most successful competitors in their ranks the honors which the reports of our examiners have enabled us to award. In the total number of students who have passed the examination for our various classes of degrees, diplomas, and certificates, the result is nearly equal to that of those who were presented to us on the last occasion of a similar meeting in 1854; but I confess to my feeling some disappointment on finding that the number of candidates for our first degree in Arts from those three collegiate institutions, has fallen not only below my expectations, which anticipated an increase upon the former number in the present class, but has been, in fact, less than in the preceding year. In that year thirty candidates of those examined for that degree were passed by the examiners. We have now had presented for examination only nineteen, all of whom, however, I am happy to say, have been deemed by the examiners sufficiently qualified to obtain it. This apparent diminution in the number of candidates for the degree of Bachelor of Arts is subject to some correction, in the fact that, in addition to the students who have actually appeared for the examination, twelve others sent forward their names as intending to seek the degree, who have not finally presented themselves before the examiners. I hope these young gentlemen have not, after having successfully passed through their collegiate course, altogether abandoned the intention of graduating in the University. I cannot imagine any motive they could be actuated by in so foregoing the opportunity of attaining that degree, for which, in truth, their studies in college are more especially the preparation, and which gives the appropriate stamp and value in the currency of learning, and for their particular pursuits in the world, to the stores of literature and science in the accumulation of which they have been so long engaged. I assume rather that possibly they may not yet have felt their studies sufficiently matured; that they purpose to devote another year to the completion of them, and prefer to undergo this additional labour, and to incur the delay of so much time rather than encounter on this occasion the risk and discredit of being unsuccessful in the examination. I hope, therefore, that their absence from this year's competition is but temporary, and that on the next occasion of our meeting for the like purpose they will be found high in the list of successful graduates of the Queen's University. As respects those who have now come forward to seek our degrees, I am happy in being enabled to testify to the generally satisfactory character of the answering in their respective classes, as reported by the examiners; while in several instances, among the class of competitors for honors, they have described it as of the highest order, and special recommendations have been made to us of individuals who, though unsuccessful in this competition, yet approached so near to the extreme point of success that the examiners were desirous the Senate should confer extra medals or prizes on those so recommended. On full consideration, however, the Senate has been of opinion that the list of honors proposed by its ordinance in the respective classes was fairly proportionate to the number of students engaged in the competition, and that any increase which would exceed that just proportion might have the effect of detracting from the value of these honorary distinctions, by exposing them to the charge of being too general and indiscriminate. The Senate, therefore—but, I may say, not without some feeling of reluctance—judged it best and most conducive to the preservation of the high character it seeks to establish and maintain for its degrees and honorary distinctions, to adhere to the list of honors as already fixed by the ordinance; but they

have authorized the secretary, in any case where a special recommendation of this nature has been made by the examiners, to give to the student in whose favour it has been presented, an official certificate to that effect, so that he may not be without some abiding testimonial of the merit so acknowledged and so commended. In addition to the ordinary class of candidates for our degrees from the Queen's Colleges, we purpose on this occasion, under the special power of our charter, to admit to the degree of Doctor of Medicine two gentlemen who have already attained that degree in another University.

On the former occasions of our annual meetings in this Hall I thought it appropriate to the business of the day to make some observations on the degrees and honors conferred by this University, the course of instruction through which the students seeking those degrees were required to pass, and the special purposes designed in the institution of the Queen's Colleges, of which this University is the head, and of the University itself. I endeavoured to convey some general views of the extensive field of literature—of classical and scientific knowledge—through which the students of those colleges had successfully pursued their way, and to impress upon the public mind the intrinsic value of the degrees to which, by this pursuit, they had finally attained. For the colleges, it was my object to show that in their schools of learning, in the excellence of their professors, and in the material appliances of scientific teaching, they were adequate to the purpose they had been destined to fulfil—the sound and practical education of the youth of Ireland; and that, while the preservation of the great fundamental principle, that this education should be one common to united classes of all religious creeds and denominations was the governing and paramount rule to which every branch of the system must conform, yet that within the institutions themselves, and as part of their organisation, provision was carefully made for the supervision of the moral conduct and religious education of the students, so far as practically could be devised for such institutions in the provinces of Ireland. And for the University itself, I endeavoured to vindicate its title to that designation, on the very fact of its headship of the colleges so based on a system of general and united education. Retaining these views, and anxiously desiring their general recognition, I have but, on the present occasion, to refer thus briefly to them, feeling that I cannot add any thing in support of them to the observations I have already thought it my duty to make. I am very conscious that in these observations I am far, indeed, from having exhausted these wide and interesting subjects; but I am equally conscious that I have exhausted my own powers of advocacy in support of them. There are, however, a few topics in connexion with our collegiate and university courses of education to which, on the present occasion, I think I may be justified in alluding, and I do so with the more satisfaction, and the greater assurance that I will not be thought unnecessarily to trespass on the attention of this meeting, because I find in them striking evidences of the soundness of the general principles on which the courses of learning, both general and professional, have been established, as well in the colleges as for our university degrees, and points of excellence in those arrangements which are not unworthy of public attention. In the first place I will notice that which more immediately belongs to my own profession—the study of law and jurisprudence. I know that in the older universities of England and Ireland professorships have been founded in those sciences, and lectures given by able and learned men, well deserving the diligent attention of the student and the approbation of the public; but I do not, I think, depreciate those institutions, when I observe that these subjects have not hitherto substantially formed part of their normal courses of learning, or been sustained by any special encouragement in the way of collegiate position or university honors. In the establishment of the Queen's Colleges, these important branches of learning—important in some degree to every man entering on a public career, indispensable to the professional student—occupy a higher place. The foundations of the colleges comprise professorships in general jurisprudence and in English law. The study of the former of these sciences constitutes a part of the general courses to be pursued by every student in the faculty of Arts; while in the faculty of Law, comprising both professorships, there have been established by the charter of each college three scholarships, to be competed for in every year by students of the three respective annual classes. In the ordinances of the University, likewise, a prominent place has been assigned to these branches of learning. We have established a diploma of elementary law, to be awarded, on sufficient answering before our examiners, to students of the colleges who shall have pursued there, for three years, courses of study which comprise general jurisprudence, the civil law, and the law of England in its various branches of legal and equitable jurisdiction; and one of our honorary premiums is assigned to the best answerer of the candidates for this diploma on a special honor examination. As regards the degrees of bachelor of laws and doctor of laws, which may be conferred by the Senate of this University, they are not here mere formal steps in the scale of learned titles to be attained by the performance of some trivial and unmeaning exercises at the end of a given term of years from the assumption of a prior degree. On the contrary, special examinations are assigned to the candidates for these distinctions, making them, as all university degrees ought properly to be, true tests of merit and knowledge in their possessors. The time within which the colleges and the university have been in existence has not as yet allowed of any candidate seeking the degree of LL.D.; and for that of bachelor of laws, from the same cause, the number has been but inconsiderable—too small, indeed, to justify the Senate in continuing to that class in its present ordinance any separate honor examinations, as they may be induced to do when the attendance of a more numerous list shall appear to justify the proposal.

It is most gratifying to the Senate, and to the authorities and professors of the respective colleges, to know that these arrangements for the study of those most useful branches of learning have not been without their appropriate fruits. On the occasions of our examinations here—and I have the authority of the learned examiner in jurisprudence for more especially alluding in this respect to that just conducted by him—the answering of the students has been most satisfactory, most creditable to themselves and to the professors whose instructions they have attended; and, I believe, had our ordinances provided for an honor examination in the class of candidates for the degree of Bachelor of Laws, the gentleman on whom that degree is to be conferred to-day would have added this honor to those with which his highly distinguished collegiate and university career has already been decorated.

A still more interesting matter for congratulation, in reference to this subject, is to be found in the distinguished success of a student of one of the colleges—that of Belfast, a graduate of this University, who has obtained the highest honor, a valuable scholarship, at a late examination of the students of law in London. The Inns of Court in England are seriously engaged in effecting improvements in the mode and system of education to be pursued by students seeking to qualify themselves for the exercise of the legal profession; the Benchers of our Inns, in conjunction with the Board of Trinity College, have made some important advances in the same direction; there is much still to be done for the improvement of the systems in both countries, but the sound and true principle is established; and the success of the graduate of our University, on the occasion I have alluded to, affords a strong evidence that his collegiate course of instruction has been one well calculated to qualify him for successful competition in examination on subjects, deemed by learned and thinking men among the most enlightened of English jurists, as those best adapted for sound legal instruction. I have great satisfaction also in referring, on this head, to some letters received by our secretary from the learned gentleman who fills the chair of the Regius Professorship of Law in the University of Cambridge, in the first of which, after alluding to our printed examination papers, and requesting copies of them, and stating that he is a member of a committee appointed for the purpose of entirely remodelling the course of lectures for the faculty of Law in that University, he says, "The questions in the Queen's Colleges for the degree of LL.B., as well as those on jurisprudence, strike me as being so admirably adapted to students of the principles of law, that I should wish to make as much use of them as I can;" and again, in reply to a letter from Dr. Ball, with which had been transmitted to him some copies of the University and College papers, containing the examination questions, Dr. Abdey says, "I sincerely trust that in many points we shall imitate the system adopted in the Queen's Colleges in our proposed new Law classes in this University, as I feel no doubt of the benefit we shall derive by so doing. I speak with more boldness on the subject of the questions in Jurisprudence and the Civil Law, as that is my own department here." "But it is not only in the Law papers that your Colleges show their merit and utility. The whole system of education pursued by you is, in my humble opinion, so good and so well suited to the present times, that I sincerely trust it may defy all opposition."

The second part of the topics to which I think it not unimportant to allude in connexion with our institutions is one also of a professional character—I allude to the degree conferred by this University of Doctor of Medicine, to which a large proportion of our students are to-day to be admitted, and I do so for the purpose of removing an impression respecting it, which, possibly, its title may lead some to entertain. In the common apprehension of the public it may be supposed that the studies appropriately required from the candidates for this degree are those only of the Doctor of Medicine in the restricted acceptation of that term—those merely of the physician as distinguished from those of the surgical professor—and, moreover, that all that our colleges can teach, or that the University requires, is but the theoretical learning of lecture-rooms and books. Our course and system are widely different. The professors of anatomy, physiology, and surgery, are members of the faculty of medicine in each of the colleges; in connexion with each are established arrangements for the practical illustration of these sciences, under the care of able and intelligent assistants; and the College lectures and examination for scholarships in that faculty are directed to inform the student and test his learning and application in those respective studies as well and as fully as in the mere theory and practice of medicine. The same course and system prevail in the double examinations, prescribed by the ordinances of the Senate, for the candidates for its degree, while in addition to the requirements so laid down, and to his passing satisfactorily our examination in all those branches of professional learning, and other requisite subjects, we further demand of the student certificates of his attendance in recognised hospitals, on the actual practice of the several branches of medical and surgical art, for periods of very considerable duration. Thus, I may say, we have practically made the degree of Doctor of Medicine of the Queen's University one which might with almost equal propriety be called a surgical as it is nominally styled a medical degree, endeavouring to make the medical tuition of our graduates universal and complete—to endow them with the learning of the physician and the practical knowledge of the surgeon, qualifying them in so doing, as far as our institutions and requirements can do, for the exercise of every branch of their important profession.

Another, and the last topic to which on the present occasion I feel at liberty to advert, is one which has in very recent times largely occupied the public mind, and made rapid progress in public estimation. It is one involving important consequences in many branches

of civil and political life, and deeply interesting to our Colleges and Universities, from its bearing on the general diffusion of knowledge and the material interests of the youthful student. I allude to the practical introduction of the principle of competitive examination in the selection of large classes of official public servants. After some differences of opinion as to the propriety of its adoption, and some struggle, but a brief one, this principle may now be recognised as fairly established. There have been, and there will perhaps always be, contentions as to the limits of its application; with some it will be thought to be every thing, with others of little or scarce any avail; but, looking to the result already attained, and to the plain, intelligible, common sense doctrines on which it rests, I cannot believe that in this matter our steps ever will be retrograde, and I hail the establishment of this principle as a fact accomplished in the institutions of the empire, bearing with it vast and cheering prospects for the advocates of learning—for all engaged in the direction of public education—and more than this, for all engaged under that direction in the acquisition of knowledge. The authorities on whom devolves the selection of the public administrators and official functionaries of the vast regions of Eastern India have sanctioned the adoption of this principle in an important class of their civil appointments. The home government of England, by a recent order in council, has in like manner nominated a commission of examiners for testing the qualifications of candidates for junior situations in all her Majesty's civil establishments. I hold in my hand a copy of a return made to the House of Commons in July last, showing the number of the public departments, the qualification of whose servants are to be thus determined, in England and Wales, in Scotland, and in Ireland—in all eighty-four—embracing, I believe, every civil government department in the three kingdoms of the empire. And this commission has been already in active operation, as the return demonstrates. The amount of situations thus about to be brought to the test of future competitive examination I am unable to state. I might, perhaps, not use an extravagant term if I described it as enormous. Upon a subject which has excited latterly so great a share of public attention and discussion, especially in the periodical press, it would be unpardonable in me on this occasion to enter more at large; but I may, with some satisfaction on behalf of our Colleges and University allude to the fact, that among the successful candidates for the appointments competed for in the examination held under the direction of the Board of Commissioners for the affairs of India, are two of the students of these colleges, one of whom, Mr. Raymond West, is to be admitted on the present occasion to our degree of Bachelor in Arts. I rejoice in this success as well on account of the individual students who have thus shown their pre-eminence, as from the testimony it bears to the useful character of the course of study in which they were trained in their respective colleges, and its adaptation to the standard of literary and scientific acquirements, which the eminent and highly-gifted individuals consulted on the proper course of such an examination, deemed the best suited to the exigencies of a public service demanding no ordinary qualifications, and exposed at times to no ordinary trials. But apart from, and above this local consideration, I regard the recognition of this principle of competitive examination, in public departments, as a great incentive to the student of every college and seminary of learning; it tends in a high degree to aid him in that struggle, which every man must engage in who desires to be the honourable artificer of his own position and fortunes, to place early advancement within the reach of the labours of his own head; and to relieve him from the indolent, yet wearying, seeking after patronage in which so many have wasted their youthful energies and their whole life's best time; and we may, perhaps with some confidence, indulge the hope that, under this more pure and enlightened system, the complaint of the poet of the evils attendant on this seeking after patronage will no longer touch us but as the querulous lamentation of a long-vanished age. I make no apology for recalling it to your recollections from the expressive pages of Spenser:—

"Full little knowest thou, that hast not tried
What hell it is in suing long to bide;
To lose good days, that might be better spent;
To waste long nights in pensive discontent;
To speed to-day, to be put back to-morrow;
To feed on hope, to pine with fear and sorrow;
To have thy Prince's grace, yet want her Peers';
To have thy asking, yet wait many years;
To fret thy soul with crosses and with cares;
To eat thy heart through comfortless despairs;
To fawn, to crouch, to wait, to ride, to run,
To spend, to give, to want, to be undone."

In the absence of our Chancellor, the Earl of Clarendon, whose public duties in another part of the empire will, I apprehend, long prevent his discharging this office in person—as, I am confident, he would desire to do—I proceed to confer on the successful candidates, now present, the degrees and honors awarded to them by the Senate of the Queen's University.

Candidates for degrees were then called. They were introduced in succession by the respective Presidents of their Colleges, when, having signed the roll and the Secretary having certified for them, his Lordship conferred the degrees which had been awarded by the Senate.

The business of the meeting having been brought to a close, the Vice-Chancellor addressed his Excellency the Lord Lieutenant as follows:—

May it please your Excellency—Having reached the close of our university proceedings, there remains to me the grateful office of returning to you the thanks of the Senate for the privilege you have been graciously pleased to accord to them of holding their public

meeting in this Hall, and for the honour you have done us in gracing our assembly with your presence. I would hope, my Lord, that the proceedings of to-day have not been without interest to you, although I regret it has not been permitted to us to present before you a larger body of our collegiate students. Our institution, however, is but yet in its infancy—the colleges have received their foundation since the period of your Excellency's former official connexion with this country—they have had to sustain much, but I would still hope, a gradually decreasing opposition—their progress has been necessarily affected by the times of public calamity with which our land has so awfully been visited—they have difficulties to contend with, some in the social condition of the people, some in the pecuniary expenditure which the continuous course of study established in them requires from the students; but, perhaps, the greatest is the want of a good local supply of preparatory schools, where the young could be sufficiently educated to enter at once, and with adequate preliminary instruction, upon the more advanced courses of collegiate study. Our University itself has been of still more recent establishment, and the present is only the fourth year in which we have met to confer degrees. Our progress, however, has not been inconsiderable, nor is it discouraging. Besides the large number of students who have attended the colleges for purposes not requiring the assumption of a formal degree or diploma, we have already recorded on our university books, including the class just presented before your Excellency, the names of thirty-five doctors of medicine, twenty-two masters of arts, ninety-six bachelors of arts, and three bachelors of law; nine who have obtained our diploma of agriculture, ten who have obtained that of elementary law, one that of engineering, and six students have passed their first examination in medicine, who, I trust, in due time, will present themselves as candidates for our degree of doctor in that faculty. We have further the satisfaction of knowing that our courses of study and degrees have deservedly attracted the estimation of learned men in other lands, who have witnessed the success of students of our colleges in competition with members of every other seminary in the United Kingdom. The Legislature has sanctioned additional aids to the pecuniary resources of the colleges, and we have been honoured from the commencement of our labours by the gracious support and fostering encouragement of your Excellency's predecessors in the exalted office which her Majesty has intrusted to your charge. I venture to assure myself and this institution that we build on no insecure foundation, when we calculate that from your Excellency we shall receive a no less favourable acceptance—a no less kind and encouraging support. We have already abundant evidence to satisfy us of the justice of these expectations in the interest you have ever taken in the advancement and prosperity of Ireland, the knowledge of her wants and her resources, with which your official connexion with this country has abundantly supplied you, and the careful and benevolent anxiety you have shown in your personal inspection and examination of the condition of all the public establishments of the country. The College of Cork has been already visited by your Excellency, and that of Belfast, I presume, will receive the honour of your inspection on the occasion of your approaching visit to that great emporium of Irish manufacturing and commercial industry; and, perhaps, a future journey to the west may give to the College of Galway the occasion of a similar honour. This personal examination will speak infinitely better than I can for the benefits such institutions are calculated to confer upon our country, and, I trust, must favourably commend them to your Excellency's judgment and care. I am the more impressed with the belief that we may safely rest upon your Excellency's gracious support, from the substantial proof you have already given of your desire that they should partake of all the benefits your high position will enable you to confer upon our colleges. I have already alluded to the principle of competitive examination for the selection of officers in the various departments of the state. Your Excellency has given the sanction of your high name and authority to that great principle, in establishing that the office of Registrar to the Queen's College of Galway, now vacant, and in the patronage of the Lord Lieutenant, should be so competed for by graduates of this University, at an examination which, I believe, will be holden in the ensuing week. On the part of the Colleges and the University I tender your Excellency our acknowledgment of the favour thus shown, and of the value which such a recognition of the principle of examination must confer on the system itself, and on the institutions under our care. I trust that they will always be found deserving of your Excellency's support, and of honour such as that conferred upon us by your Excellency's presence here to-day.

His Excellency the Lord Lieutenant then rose and said—Mr. Vice-Chancellor and Gentlemen, I receive with pleasure and gratitude the compliment which has been so obligingly proposed by you, and conferred on me, on behalf of the Senate. Let me assure the whole of the very learned and distinguished assembly here convened, that it has been no common satisfaction to me thus to have assisted at the proceedings which have now been concluded. It is also gratifying to me, as it must be to all, I imagine, to see noble and princely halls, like that in which we now are, which are ordinarily set apart for lighter purposes, and the mere festivities of the state, made thus ancillary to the highest ends of science, art, and literature. After the similar functions which have been performed here in previous years, and especially after the full and lucid expositions which in this, as in former instances, have been delivered by the learned Vice-Chancellor of the University, I feel it would be wholly, and indeed worse than, superfluous for me to dwell, for one moment, upon the nature or object of the institution with which we are now concerned, or on those statistics of learning and instruction which are connected with it. I wish, indeed, that our meeting of this afternoon could have been graced by the presence of my

noble friend and colleague, the Earl of Clarendon, the Chancellor of the University, to whose enlightened and fostering care it owes already so much; but, with Europe at war pressing on his attention, we cannot wonder, however we may grieve, at his absence. Since the foundation of the University under his auspices, its new-born muses have been successively encouraged from this place by the courteous chivalry of the Earl of Eglinton and the mild wisdom of the Earl of St. Germans.

Virtus Scipiadæ, et mitis sapientia Læli.

After all these high names, there is one still I should like not to pass over in complete silence on this occasion; and those who are best acquainted with the early history and birth-struggles of the Queen's Colleges will know best how much they are indebted to the exertions of our Minister at Athens, Mr. Wyse. When I was last with Mr. Wyse, we explored together the site of that ancient academy, that hill of Colonus, of which Sophocles sung, and the olive grove where Plato reasoned. I wish that he could now be at my side, not to trace with fond reverence the dim vestiges of buried glory, but to hail with joyous hope the future progress and expanding triumphs of his living countrymen. The recent period of my arrival in Ireland has only as yet enabled me to visit one of the Queen's Colleges, that in Cork, though I trust that my acquaintance with the others will not be long delayed. In the Queen's College of Cork I was very glad to perceive—though so cursory a visit as I was enabled to pay hardly warrants me in speaking further of that degree of progress and prosperity which it has, I am happy to say, so undoubtedly attained—but I was very glad to see that a neat, suitable, and comely architecture has been called in to assist in the accommodation of those kindred arts and sciences which lend to, and borrow from, architecture so much mutual grace and spirit. Very pleasant it is to see that in our honoured elder sister University of this capital this happy union is now receiving such splendid illustration. All I have been able to gather concerning your associated seats of learning induces me to believe that they have adopted the fortunate medium of combining all these main branches of instruction which have hitherto accompanied the civilisation, nurtured the intellect, and embellished the taste of mankind, with those new branches of study which the discoveries of more recent times, and the wide developments of human industry and enterprise make of such high daily practical value, and which, allow me to add, the probable increased adoption of the test of merit in all the departments of national science, on which your Vice-Chancellor has remarked with so much emphasis, will render yet more indispensable. I have endeavoured, within such narrow limits as have been open to me, to adhere to this principle in all the appointments connected with the new Irish colleges. For the very few longer moments that can be allowed to me, I turn to those, whom, I am sure, even these very eminent and conspicuous men who have constituted the board of examiners on this occasion will yet allow me to consider that portion of the numerous auditory I address, which concentrates the largest share of interest and hope—I refer to the young men who have on this occasion received degrees, diplomas, and honors. Will you, my young friends, accept my cordial congratulations upon what you have achieved; my earnest exhortations to you to pursue and persevere in that honourable and brilliant career upon which you have entered. Believe me that the conditions of the world in which we live are becoming every day more and more such as to make the possession of knowledge and the mastery of mind the condition of success and the avenue to greatness; believe me also that the exercise and proper direction of the intellect, the taste, and the fancy, bring with themselves pleasures and resources intrinsic to themselves, and wholly independent of success and of their worldly results. But when I talk to you of pleasure, when I talk of success, I am conscious of using far too low a key-note. Pleasure, you will admit, is not entitled to be considered as the business of life; and as for success, though it has many lofty and ennobling attributes when it is the reward of honest diligence, and the test of fine powers conscientiously used; and though I am at this moment exhorting you in laying out the future plans of your lives to aim at success, yet I would have you remember that this very success is compatible with lax principles, with vulgar feelings, with vicious habits, and may be reached by those who can show no title to the love of their fellows or the favour of their God. Be yours a yet higher and more real ambition. It is not who you are, but what you are, that really signifies. The situations you may fill in life are beyond your control, and though they should be as exalted and splendid as your most soaring dreams could picture, they might leave you mean, unhonoured, and unloved. The characters you may make for yourselves, in humble dependence on the blessing from above, are in your own power, and can never disappoint or fail you. Each act and habit of virtuous self-denial, the active exercise of Christian love, the live-long obedience of faith, these are the things which will secure to you, not such transient honours and distinctions as we have this day awarded you, but the supreme blessing and the immortal crown.

The assembly then separated.

Appendix II.

EXAMINATION FOR THE DEGREE OF A.M.

26th September, 1855, 9 *o'clock, a.m.*

Greek.—*Examiner, William Nesbitt, A.M.*

I. Translate Thucydides, II., 42:

διὸ δὴ καὶ ἐμήκυνα τὰ περὶ τῆς πόλεως, διδασκαλίαν τε ποιούμενος μὴ περὶ ἴσου ἡμῖν εἶναι τὸν ἀγῶνα καὶ οἷς τῶνδε μηδὲν ὑπάρχει ὁμοίως, καὶ τὴν εὐλογίαν ἅμα ἐφ' οἷς νῦν λέγω φανερὰν σημείοις καθιστὰς, καὶ εἴρηται αὐτῆς τὰ μέγιστα· ἃ γὰρ τὴν πόλιν ὕμνησα, αἱ τῶνδε καὶ τῶν τοιῶνδε ἀρεταὶ ἐκόσμησαν, καὶ οὐκ ἂν πολλοῖς τῶν Ἑλλήνων ἰσόρροπος ὥσπερ τῶνδε ὁ λόγος τῶν ἔργων φανείη. δοκεῖ δέ μοι δηλοῦν ἀνδρὸς ἀρετὴν πρώτη τε μηνύουσα καὶ τελευταία βεβαιοῦσα ἡ νῦν τῶνδε καταστροφή. καὶ γὰρ τοῖς τἆλλα χείροσι δίκαιον τὴν ἐς τοὺς πολέμους ὑπὲρ τῆς πατρίδος ἀνδραγαθίαν προτίθεσθαι· ἀγαθῷ γὰρ κακὸν ἀφανίσαντες κοινῶς μᾶλλον ὠφέλησαν ἢ ἐκ τῶν ἰδίων ἔβλαψαν. τῶνδε δὲ οὔτε πλούτῳ τις τὴν ἔτι ἀπόλαυσιν προτιμήσας ἐμαλακίσθη, οὔτε πενίας ἐλπίδι, ὡς κἂν ἔτι διαφυγὼν αὐτὴν πλουτήσειεν, ἀναβολὴν τοῦ δεινοῦ ἐποιήσατο· τὴν δὲ τῶν ἐναντίων τιμωρίαν ποθεινοτέραν αὐτῶν λαβόντες, καὶ κινδύνων ἅμα τόνδε κάλλιστον νομίσαντες, ἐβουλήθησαν μετ' αὐτοῦ τοὺς μὲν τιμωρεῖσθαι τῶν δὲ ἐφίεσθαι, ἐλπίδι μὲν τὸ ἀφανὲς τοῦ κατορθώσειν ἐπιτρέψαντες, ἔργῳ δὲ περὶ οὗ ἤδη ὡρωμένου σφίσιν αὐτοῖς ἀξιοῦντες πεποιθέναι, καὶ ἐν αὐτῷ τὸ ἀμύνεσθαι καὶ παθεῖν μᾶλλον ἡγησάμενοι ἢ τὸ ἐνδόντες σώζεσθαι, τὸ μὲν αἰσχρὸν τοῦ λόγου ἔφυγον τὸ δ' ἔργον τῷ σώματι ὑπέμειναν, καὶ δι' ἐλαχίστου καιροῦ τύχης ἅμα ἀκμῇ τῆς δόξης μᾶλλον ἢ τοῦ δέους ἀπηλλάγησαν.

(*a*) Illustrate by a parallel from Thucydides the form of expression οὔτε πενίας ἐλπίδι, ὡς κ. τ. λ.

(*b*) How has Pericles in the speech from which the above extract is taken characterized the philosophical and the æsthetic principles of his countrymen at the beginning of the Peloponnesian war?

II. Translate Aristophanes, Clouds, 222–261:

ΣΤΡΕΨΙΑΔΗΣ. ὦ Σώκρατες
ὦ Σωκρατίδιον.
ΣΩΚΡΑΤΗΣ. τί με καλεῖς, ὦ 'φήμερε;
ΣΤΡΕ. πρῶτον μὲν ὅ τι δρᾷς, ἀντιβολῶ, κάτειπέ μοι.
ΣΩ. ἀεροβατῶ καὶ περιφρονῶ τὸν ἥλιον.
ΣΤΡΕ. ἔπειτ' ἀπὸ ταρροῦ τοὺς θεοὺς ὑπερφρονεῖς,
ἀλλ' οὐκ ἀπὸ τῆς γῆς, εἴπερ——ΣΩ. οὐ γὰρ ἄν ποτε
ἐξεῦρον ὀρθῶς τὰ μετέωρα πράγματα
εἰ μὴ κρεμάσας τὸ νόημα καὶ τὴν φροντίδα
λεπτὴν καταμίξας εἰς τὸν ὁμοῖον ἀέρα.
εἰ δ' ὢν χαμαὶ τἄνω κάτωθεν ἐσκόπουν,
οὐκ ἄν ποθ' εὗρον· οὐ γὰρ ἀλλ' ἡ γῆ βίᾳ
ἕλκει πρὸς αὑτὴν τὴν ἰκμάδα τῆς φροντίδος.
πάσχει δὲ ταὐτὸ τοῦτο καὶ τὰ κάρδαμα.
ΣΤΡΕ. τί φῄς;
ἡ φροντὶς ἕλκει τὴν ἰκμάδ' εἰς τὰ κάρδαμα;
ἴθι νυν, κατάβηθ', ὦ Σωκρατίδιον, ὡς ἐμέ,
ἵνα με διδάξῃς ὧνπερ οὕνεκ' ἐλήλυθα.
ΣΩ. ἦλθες δὲ κατὰ τί; ΣΤΡΕ. βουλόμενος μαθεῖν λέγειν,
ὑπὸ γὰρ τόκων χρήστων τε δυσκολωτάτων
ἄγομαι, φέρομαι, τὰ χρήματ' ἐνεχυράζομαι.
ΣΩ. πόθεν δ' ὑπόχρεως σαυτὸν ἔλαθες γενόμενος;
ΣΤΡΕ. νόσος μ' ἐπέτριψεν ἱππικὴ, δεινὴ φαγεῖν.
ἀλλά με δίδαξον τὸν ἕτερον τοῖν σοῖν λόγοιν,
τὸν μηδὲν ἀποδιδόντα. μισθὸν δ' ὁντιν' ἂν
πράττῃ μ' ὁμοῦμαί σοι καταθήσειν τοὺς θεούς.
ΣΩ. ποίους θεοὺς ὁμεῖ σύ; πρῶτον γὰρ θεοὶ
ἡμῖν νόμισμ' οὐκ ἔστι. ΣΤΡΕ. τῷ γὰρ ὄμνυτ'; ἢ
σιδαρέοισιν, ὥσπερ ἐν Βυζαντίῳ;
ΣΩ. βούλει τὰ θεῖα πράγματ' εἰδέναι σαφῶς
ἅττ' ἐστὶν ὀρθῶς; ΣΤΡΕ. νὴ Δί', εἴπερ ἔστι γε.
ΣΩ. καὶ ξυγγενέσθαι ταῖς Νεφέλαισιν ἐς λόγους,
ταῖς ἡμετέραισι δαίμοσιν; ΣΤΡΕ. μάλιστά γε
ΣΩ. κάθιζε τοίνυν ἐπὶ τὸν ἱερὸν σκίμποδα.
ΣΤΡΕ. ἰδοὺ κάθημαι. ΣΩ. τουτονὶ τοίνυν λαβὲ
τὸν στέφανον. ΣΤΡΕ. ἐπὶ τί στέφανον; οἴμοι, Σώκρατες,
ὥσπερ με τὸν Ἀθάμανθ' ὅπως μὴ θύσετε.
ΣΩ. οὐκ, ἀλλὰ ταῦτα πάντα τοὺς τελουμένους
ἡμεῖς ποιοῦμεν. ΣΤΡΕ. εἶτα δὴ τί κερδανῶ;
ΣΩ. λέγειν γενήσει τρίμμα, κρότταλον, παιπάλη.
ἀλλ' ἔχ' ἀτρεμί.

(*a*) Supply the ellipsis at εἴπερ. v. 227.
(*b*) Explain the construction εἰ μὴ κρεμάσας. v. 229.
(*c*) Resolve the phrase οὐ γὰρ ἀλλά. v. 232.
(*d*) Account for the Doric form σιδαρέοισιν. v. 249.
(*e*) Explain the construction ὥσπερ με τὸν Ἀθάμανθ ὅπως μὴ θύσετε. v. 257. What is the force of the future after ὅπως μὴ?

III. Translate Xenophon's Memorabilia, I., 10–16:

Ἀλλὰ μὴν ἐκεῖνός γε ἀεὶ μὲν ἦν ἐν τῷ φανερῷ· πρωΐ τε γὰρ εἰς τοὺς περιπάτους καὶ τὰ γυμνάσια ἤει, καὶ πληθούσῃ ἀγορᾶς ἐκεῖ φανερὸς ἦν, καὶ τὸ λοιπὸν ἀεὶ τῆς ἡμέρας ἦν ὅπου πλείστοις μέλλοι συνέσεσθαι· καὶ ἔλεγε μὲν ὡς τὸ πολύ, τοῖς δὲ βουλομένοις ἐξῆν ἀκούειν. Οὐδεὶς δὲ πώποτε Σωκράτους οὐδὲν ἀσεβὲς οὐδὲ ἀνόσιον οὔτε πράττοντος εἶδεν, οὔτε λέγοντος ἤκουσεν. Οὐδὲ γὰρ περὶ τῆς τῶν πάντων φύσεως ὑπὲρ τῶν ἄλλων οἱ πλεῖστοι διέλεγετο, σκοπῶν, ὅπως ὁ καλούμενος ὑπὸ τῶν σοφιστῶν κόσμος ἔφυ, καὶ τίσιν ἀνάγκαις ἕκαστα γίγνεται τῶν οὐρανίων, ἀλλὰ καὶ τοὺς φροντίζοντας τὰ τοιαῦτα μωραίνοντας ἀπεδείκνυεν. Καὶ πρῶτον μέν αὐτῶν ἐσκόπει, πότερά ποτε νομίσαντες ἱκανῶς ἤδη τἀνθρώπινα εἰδέναι ἔρχονται ἐπὶ τὸ περὶ τῶν τοιούτων φροντίζειν, ἢ τὰ μὲν ἀνθρώπεια παρέντες, τὰ δαιμόνια δὲ σκοποῦντες, ἡγοῦνται τὰ προσήκοντα πράττειν. Ἐθαύμαζε δ', εἰ μὴ φανερὸν αὐτοῖς ἐστιν, ὅτι ταῦτα οὐ δυνατόν ἐστιν ἀνθρώποις εὑρεῖν· ἐπεὶ καὶ τοὺς μέγιστον φρονοῦντας ἐπὶ τῷ περὶ τούτων λέγειν οὐ ταὐτὰ δοξάζειν ἀλλήλοις, ἀλλὰ τοῖς μαινομένοις ὁμοίως διακεῖσθαι πρὸς ἀλλήλους. Τῶν τε γὰρ μαινομένων τοὺς μὲν οὐδὲ τὰ δεινὰ δεδιέναι, τοὺς δὲ καὶ τὰ μὴ φοβερὰ φοβεῖσθαι· καὶ τοῖς μὲν οὐδ' ἐν ὄχλῳ δοκεῖν αἰσχρὸν εἶναι λέγειν ἢ ποιεῖν ὁτιοῦν, τοῖς δὲ οὐδ' ἐξιτητέον εἰς ἀνθρώπους εἶναι δοκεῖν· καὶ τοὺς μὲν οὔθ' ἱερὸν οὔτε βωμὸν οὔτε ἄλλο τῶν θείων οὐδὲν τιμᾶν, τοὺς δὲ καὶ λίθους καὶ ξύλα τὰ τυχόντα καὶ θηρία σέβεσθαι· τῶν τε περὶ τῆς τῶν πάντων φύσεως μεριμνώντων τοῖς μὲν δοκεῖν ἓν μόνον τὸ ὂν εἶναι, τοῖς δ' ἄπειρα τὸ πλῆθος· καὶ τοῖς μὲν ἀεὶ κινεῖσθαι πάντα τοῖς δ' οὐδὲν ἂν ποτε κινηθῆναι· καὶ τοῖς μὲν πάντα γίγνεσθαί τε καὶ ἀπόλλυσθαι, τοῖς δὲ οὔτ' ἂν γενέσθαι ποτὲ οὐδὲν οὔτ' ἀπολεῖσθαι, Ἐσκόπει δὲ περὶ αὐτῶν καὶ τάδε· ἆρ', ὥσπερ οἱ τἀνθρώπεια μανθάνοντες ἡγοῦνται τοῦθ', ὅ τι ἂν μάθωσιν, ἑαυτοῖς τε καὶ τῶν ἄλλων ὅτῳ ἂν βούλωνται ποιήσειν, οὕτω καὶ οἱ τὰ θεῖα ζητοῦντες νομίζουσιν, ἐπειδὰν γνῶσιν, αἷς ἀνάγκαις ἕκαστα γίγνεται, ποιήσειν, ὅταν βούλωνται, καὶ ἀνέμους καὶ ὕδατα καὶ ὥρας καὶ ὅτου δ' ἂν ἄλλου δέωνται τῶν τοιούτων, ἢ τοιοῦτο μὲν οὐδὲν οὐδ' ἐλπίζουσιν, ἀρκεῖ δ' αὐτοῖς γνῶναι μόνον, ᾗ τῶν τοιούτων ἕκαστα γίγνεται; περὶ μὲν οὖν τῶν ταῦτα πραγματευομένων τοιαῦτα ἔλεγεν· αὐτὸς δὲ περὶ τῶν ἀνθρωπείων ἂν ἀεὶ διελέγετο, σκοπῶν, τί εὐσεβές, τί ἀσεβές· τί καλόν, τί αἰσχρόν· τί δίκαιον, τί ἄδικον· τί σωφροσύνη, τί μανία· τί ἀνδρεία, τί δειλία· τί πόλις, τί πολιτικός· τί ἀρχὴ ἀνθρώπων, τί ἀρχικὸς ἀνθρώπων, καὶ περὶ τῶν ἄλλων, ἃ τοὺς μὲν εἰδότας ἡγεῖτο καλοὺς κἀγαθοὺς εἶναι, τοὺς δ' ἀγνοοῦντας ἀνδραποδώδεις ἂν δικαίως κεκλῆσθαι.

(*a*) πρῶτον μὲν αὐτῶν ἐσκόπει. Explain the use of αὐτῶν.
(*b*) Point out the force of ἄν in each case where it occurs.
(*c*) What systems of philosophy are here alluded to?

IV. 1. Account for the diversity between the reports of Socrates' teaching given us by Xenophon and Plato. Are they reconcilable? Mention any parallel case which may occur to you in the history of literature.

2. What innovations did Socrates make in the *subject* and in the *method* of philosophical investigation?

3. It was necessary to his purpose that his teaching should be mainly negative?

4. What is the fundamental analogy which governed all the reasonings of Socrates?

5. His theory of morals was defective?

6. What is the original meaning of the word σοφιστής? Trace the steps by which it has acquired the invidious meaning which it bears in modern languages.

7. Enumerate the most eminent sophists.

8. To the superficial observer there was much in common between Socrates and the sophists?

9. A passage in one of the orators proves that the vulgar impression which identified them was very lasting at Athens?

10. Show from an examination of the play that Socrates in the Clouds of Aristophanes is represented not as he was but as the type of a class.

11. Horace has left us two criticisms upon the old comedy of the Greeks,—compare them, and state your own opinion of its object, and of its value as evidence in reference to contemporary matters.

V. Translate into Greek prose:

"No man" (said Socrates) "knows what death is, yet men fear it as if they knew well that it was the greatest of all evils—which is just a case of that worst of all ignorance—the conceit of knowing what you do not really know. For my part, this is the exact point on which I differ from most other men, if there be any one thing in which I am wiser than they: as I know nothing about Hades so I do not pretend to any knowledge; but I do know well that disobedience to a person better than myself, either God or man, is both an evil and a shame; nor will I ever embrace evil certain, in order to escape evil which for aught I know may be a good. Perhaps you may feel indignant at the resolute tone of my defence: you may have expected that I should do as most others do in less dangerous trials than mine—that I should weep, beg, and entreat for my life, and bring forward my children and relations to do the same. I have relations, like other men, and three children; but not one of them shall appear before you for such a purpose. Not from any insolent dispositions on my part, nor any wish to put a slight upon you—but because I hold such conduct to be degrading to the reputation which I enjoy: for I have a reputation for superiority among you, deserved or undeserved as it may be."

Greek.—*Examiner, William Nesbitt, A.M.*

I. 1. Translate Pindar, Pythia, VIII., 1–47.

Φίλοφρον Ἀσυχία, Δίκας
ὦ μεγιστόπολι θύγατερ,
βουλᾶν τε καὶ πολέμων
ἔχοισα κλαῖδας ὑπερτάτας,

Στρ. α'

Πυθιόνικον τιμὰν Ἀριστομένει δέκευ
τὺ γὰρ τὸ μαλθακὸν ἔρξαι τε καὶ παθεῖν ὁμῶς
ἐπίστασαι καιρῷ σὺν ἀτρεκεῖ·
τὺ δ' ὁπόταν τις ἀμείλιχον Αντ. α'
καρδία κότον ἐνελάσῃ,
τραχεῖα δυσμενέων
ὑπαντιάξαισα κράτει τιθεῖς
Ὕβριν ἐν ἄντλῳ. τὰν οὐδὲ Πορφυρίων μάθεν
παρ' αἶσαν ἐξερεθίζων· κέρδος δὲ φίλτατον
ἑκόντος ἔι τις ἐκ δόμων φέροι.
βία δὲ καὶ μεγάλαυχον ἔσφαλεν ἐν χρόνῳ. Επ. α'
Τυφὼς Κίλιξ ἑκατόγκρανος οὔ μιν ἄλυξεν,
οὐδὲ μὰν βασιλεὺς γιγάντων· δμᾶθεν δὲ κεραυνῷ
τόξοισί τ' Ἀπόλλωνος· ὃς εὐμενεῖ νόῳ
Ξενάρκειον ἔδεκτο Κίρραθεν ἐστεφανωμένον
υἱὸν ποιᾷ Παρνασίδι Δωριεῖ τε κώμῳ.
ἔπεσε δ' οὐ Χαρίτων ἑκὰς Στρ. β'
ἁ δικαιόπολις ἀρεταῖς
κλεινᾶσιν Αἰακιδᾶν
θίγοισα νᾶσος· τελέαν δ' ἔχει
δόξαν ἀπ' ἀρχᾶς. πολλοῖσι μὲν γὰρ ἀείδεται
νικαφόροις ἐν ἀέθλοις θρέψαισα καὶ θοαῖς
ὑπερτάτους ἥρωας ἐν μάχαις·
τὰ δὲ καὶ ἀνδράσιν ἐμπρέπει. Αντ. β'
εἰμὶ δ' ἄσχολος ἀναθέμεν
πᾶσαν μακραγορίαν
λύρᾳ τε καὶ φθέγματι μαλθακῷ,
μὴ κόρος ἐλθὼν κνίσσῃ. τὸ δ' ἐν ποσί μοι τράχον
ἴτω τεὸν χρέος, ὦ παῖ, νεώτατον καλῶν,
ἐμᾷ ποτανὸν ἀμφὶ μαχανᾷ.
παλαισμάτεσσι γὰρ ἰχνέων ματραδελφεοὺς Επ. β'
Ὀλυμπίᾳ τε Θεόγνητον οὐ κατελέγχεις,
οὐδὲ Κλειτομάχοιο νίκαν Ἰσθμοῖ θρασύγυιον·
αὔξων δὲ πάτραν Μιδυλιδᾶν λόγον φέρεις
τὸν ὄνπερ ποτ' Οἰκλέος παῖς ἐν ἑπταπύλοις ἰδὼν
υἱοὺς Θήβαις αἴνιξατο παρμένοντας ἀιχμᾷ,
ὁπόταρ' ἀπ' Ἄργεος ἦλυθον Στρ. γ'
δευτέραν ὁδὸν Ἐπίγονοι.
ὧδ' εἶπε μαρναμένων·
"Φυᾷ τὸ γενναῖον ἐπιπρέπει
ἐκ πατέρων, παῖ, σοι λῆμα. θαέομαι σαφὲς
δράκοντα ποικίλον αἰθᾶς Ἀλκμᾶν' ἐπ' ἀσπίδος
νωμῶντα πρῶτον ἐν Κάδμου πύλαις."

2. (*a*) To what historical event has Pindar been supposed to allude in the introduction to this ode?

(*b*) What is the link of connexion between the digression as to Alcmæon and the subject of the ode?

(*c*) Upon what mythological principle are warlike qualities attributed to Hesychia, vv. 8–12?

3. (*a*) In what rythm is the eighth Pythic ode composed?

(*b*) Compare the Æolian and Dorian odes of Pindar, with reference to their metre, and the tone of sentiment which prevails in each.

4. (*a*) Relate the circumstances under which the Pythian games were elevated into a national festival. Give the date of the first celebration.

(*b*) In one respect they had a superiority over the Olympic.

(*c*) Describe the effect of the Pan-Hellenic festivals upon the Grecian mind.

(*d*) To what does Strabo trace their origin?

II. 1. Translate ÆSCHYLUS, AGAMEMNON, 281–316, writing brief notes where you deem it necessary.

Ἥφαιστος Ἴδης λαμπρὸν ἐκπέμπων σέλας.
φρυκτὸς δὲ φρυκτὸν δεῦρ' ἀπ' ἀγγάρου πυρὸς
ἔπεμπεν. Ἴδη μὲν πρὸς Ἑρμαῖον λέπας
Λήμνου· μέγαν δὲ πανὸν ἐκ νήσου τρίτον
Ἄθωον αἶπος Ζηνὸς ἐξεδέξατο,
ὑπερτελής τε, πόντον ὥστε νωτίσαι,
ἰσχὺς πορευτοῦ λιμπάδος πρὸς ἡδονὴν
πεύκη, τὸ χρυσοφεγγὲς ὡς τις ἥλιος

σέλας παραγγείλασα Μακίστου σκοπαῖς·
ὁ δ' οὔτι μέλλων οὐδ ἀφρασμόνως ὕπνῳ
νικώμενος παρῆκεν ἀγγέλου μέρος·
ἑκὰς δὲ φρυκτοῦ φῶς ἐπ' Εὐρίπου ῥοὰς
Μεσσαπίου φύλαξι σημαίνει μολόν.
οἱ δ' ἀντέλαμψαν καὶ παρήγγειλαν πρόσω
γραίας ἐρείκης θωμὸν ἅψαντες πυρί.
σθένουσα λαμπὰς δ' οὐδέπω μαυρουμένη,
ὑπερθοροῦσα πεδίον Ἀσωποῦ, δίκην
φαιδρᾶς σελήνης, πρὸς Κιθαιρῶνος λέπας
ἤγειρεν ἄλλην ἐκδοχὴν πομποῦ πυρός.
φάος δὲ τηλέπομπον οὐκ ἠναίνετο
φρουρὰ, πλέον καίουσα τῶν εἰρημένων·
λίμνην δ' ὑπὲρ Γοργῶπιν ἔσκηψεν φάος·
ὄρος τ' ἐπ' Αἰγίπλαγκτον ἐξικνούμενον
ὤτρυνε θεσμὸν μὴ χατίζεσθαι πυρός.
πέμπουσι δ' ἀνδαίοντες ἀφθόνῳ μένει
φλογὸς μέγαν πώγωνα, καὶ Σαρωνικοῦ
πορθμοῦ κάτοπτον πρῶν' ὑπερβάλλειν πρόσω
φλέγουσαν· εἶτ' ἔσκηψεν, ἔς τ' αφίκετο
Ἀραχναῖον αἶπος, ἀστυγείτονας σκοπάς·
κἄπειτ' Ἀτρειδῶν ἐς τόδε σκήπτει στέγος
φάος τόδ' οὐκ ἄπαπτον Ἰδαίου πυρός.
τοιοίδε τοί μοι λαμπαδηφόρων νόμοι,
ἄλλος παρ' ἄλλου διαδοχαῖς πληρούμενοι·
νικᾷ δ' ὁ πρῶτος καὶ τελευταῖος δραμών.
τέκμαρ τοιοῦτο ξύμβολόν τε σοὶ λέγω,
ἀνδρὸς παραγγείλαντος ἐκ Τροίας ἐμοί.

2. Describe the λαμπαδηφορία, citing any passages of classic authors you may remember in which it is referred to.

3. In honour of what deities was the game celebrated? In what legend, most probably, is its origin to be sought?

III. 1. The three grand divisions of the poetry of the Greeks correspond to the three different stages of their civilization?

2. Lyric poetry, among the Greeks, was cultivated by two widely different schools of poets: point out the contrast in *form* and *matter* which the compositions of these schools present.

3. Characterize the two stages of the choral lyric. Who are the leading representatives of each?

4. What are the elements of which Pindar's poetry is composed?

5. Point out the difference between the mode of treatment of mythical narrative in epic and lyric poetry, and give examples from each.

6. Trace the gradual development of tragedy out of the chorus sung in honour of Dionysus.

7. How does Æschylus stand related to Pindar in the history of Greek literature?

IV. Translate into Greek prose:—

P. How say you, Hylas, can you see a thing which is at the same time unseen? *H.* No, that were a contradiction. *P.* Is it not as great a contradiction to talk of conceiving a thing which is unconceived? *H.* It is. *P.* The tree or house, therefore, which you think of, is conceived by you? *H.* How should it be otherwise? *P.* And what is conceived is surely in the mind? *H.* Without question, that which is conceived is in the mind. *P.* How then came you to conceive a house or tree existing independent and out of all minds whatever? *H.* That was, I own, an oversight.

Translate into Greek verse:—

That time of year thou mayest in me behold,
When yellow leaves, or none, or few, do hang
Upon those boughs which shake against the cold,
Bare ruin'd choirs, where late the sweet birds sang.
In me thou seest the twilight of such day
As after sunset fadeth in the west,
Which by-and-by black night doth take away,
Death's second self, that seals up all in rest.
In me thou seest the glowing of such fire,
That on the ashes of his youth doth lie,
As the death-bed whereon it must expire,
Consum'd with that which it was nourished by.
This thou perceiv'st which makes thy love more strong,
To love that well which thou must leave ere long.

27th September, 1855, 9 *o'clock, a.m.*

LATIN.—*Examiner, Charles Parsons Reichel, B.D.*

Translate the following passages into English prose:—

I.—TACITUS, ANNALS.

1. Variis deinde casibus jactatus et multorum odia meritus reus haud tamen sine invidia Senecae damnatur. Is fuit Publius Suillius, imperitante Claudio terribilis ac venalis, et mutatione temporum non quantum inimici cuperent demissus, quique se nocentem videri quam supplicem mallet. Ejus opprimendi gratia repetitum credebatur Senatus consultum pœnaque Cinciae legis adversum eos qui pretio causas oravissent. Nec Suillius questu aut exprobratione abstinebat, praeter ferociam animi extrema senecta liber, et Senecam increpans infensum amicis Claudii, sub quo justissimum exsilium pertulisset. Simul studiis inertibus et juvenum imperitiae suetum livere iis qui vividam et incorruptam eloquentiam tuendis civibus exercerent. Se quaestorem Germanici, illum domus ejus adulterum fuisse. Au gravius existimandum sponte litigatoris praemium honestae operae assequi, quam corrumpere cubicula principum feminarum? qua sapientia, quibus philosophorum praeceptis intra quadriennium regiae amicitiae ter milies sestertium paravisset? Romae testamenta et orbos velut indagine ejus capi, Italiam et provincias immenso fenore hauriri, at sibi labore quaesitam et modicam pecuniam esse.

2. Quin et illa objectabat: principio anni vitare Thraseam solenne jusjurandum: nuncupationibus votorum non adesse, quamvis quindecimvirali sacerdotio praeditum.

II.—CICERO, DE FINIBUS, BOOK IV.

1. Quid dubitas igitur mutare principia naturae? Quid enim dicis, omne animal, simul atque sit ortum, applicatum esse ad se diligendum, esseque in se conservando occupatum? Quin potius ita dicis, omne animal applicatum esse ad id quod in eo sit optimum, et in ejus unius esse occupatum custodia; reliquasque naturas nihil aliud agere, nisi ut id conservent quod in quaque optimum sit? Quomodo autem optimum, si bonum praeterea nullum est? Si autem reliqua adpetenda sunt, cur quod est ultimum rerum adpetendarum, id non aut ex omnium earum aut ex plurimarum et maximarum adpetitione concluditur? Ut Phidias potest a primo instituere signum idque perficere, potest ab alio inchoatum accipere et absolvere. Huic est sapientia similis: non enim ipsa genuit hominem sed accepit a natura inchoatum. Hanc intuens, debet institutum illud quasi signum absolvere. Qualem igitur hominem inchoavit? et quod est munus, quod opus sapientiae? Quid est quod ab ea absolvi et perfici debeat? Si nihil in eo perficiendum est, praeter motum ingenii quendam, id est, rationem; necesse est, huic ultimum esse ex virtute vitam fingere: rationis enim perfectio est virtus: sin nihil nisi corpus, summa erunt illa, valitudo, vacuitas doloris, pulchritudo et caetera. Nunc de hominis summo bono quaeritur.

CICERO, DE NATURA DEORUM.

2. Hoc, per ipsos Deos, de quibus loquimur, quale tandem est? Nam, si tantum modo ad cogitationem valent, nec ullam habent soliditatem nec eminentiam, quid interest, utrum de Hippocentauro an de Deo cogitemus? Omnem enim talem conformationem animi caeteri philosophi motum inanem vocant: vos autem adventum in animos et introitum imaginum dicitis. Ut igitur Ti. Gracchum quum videor in capitolio concionantem videre de M. Octavio deferentem sitellam, tum eum motum animi dico esse inanem: tu autem et Gracchi et Octavii imagines remanere, quae in Capitolium quum pervenerim, tum ad animum meum referantur: hoc idem fieri in Deo, cujus crebra facie pellantur animi: ex quo esse beati atque aeterni intelligantur. Fac imagines esse, quibus pulsentur animi: species dumtaxat objicitur quaedam: num etiam cur ea beata sit? cur aeterna?

III.—LUCRETIUS, BOOK III.

Illud in his rebus nequaquam sumere possis,
Democriti quod sancta viri sententia ponit,
Corporis atque animi primordia singula, privis
Apposita, alternis variare ac nectere membra.
Nam quum multa sunt animai elementa minora
Quam quibus et corpus nobis et viscera constant,
Tum numero quoque concedunt, et rara per artus
Dissita sunt, dumtaxat ut hoc promittere possis,
Quantula prima queant, nobis injecta, ciere
Corpora sensiferos motus in corpore, tanta
Intervalla tenere exordia prima animai.
Nam neque pulveris interdum sentimus adhaesum
Corpore, nec membris incussam sidere cretam:
Nec nebulam noctu, neque aranei tenvia fila
Obvia sentimus, quando obretimur euntes:
Nec supera caput ejusdem cecidisse vietam
Vestem, nec plumas avium papposque volantes,
Qui nimia levitate cadunt plerumque gravatim:
Nec repentis itum quojusviscunque animantis
Sentimus, nec prima pedum vestigia quaeque,
Corpore quae in nostro culices et caetera ponnut.

Usque adeo prius est in nobis multa ciendum
Quam primordia sentiscant concussa animai
Semina, corporibus nostris immixta per artus,
Et quam, intervallis tantis tuditantia, possint
Concursare, coire et dissultare vicissim.

IV.—Martial.

Candide, κοινὰ φίλων, haec sunt tua Candide, πάντα,
Quae tu magniloquus nocte dieque sonas.
Te Lacedaemonio velat toga lota Galeso,
Vel quam seposito de grege Parma dedit:
At me quae passa est furias et cornua tauri,
Noluerit dici quam pila prima suam.
Misit Agenoreas Cadmi tibi terra lacernas:
Non vendas nummis coccina nostra tribus.
Tu Libycos Indis suspendis dentibus orbes,
Fulcitur testa fagina mensa mihi.
Immodici tibi flava tegunt chrysendeta mulli:
Concolor in nostra, cammare, lance rubes.
Grex tuus Iliaco poterat certare ministro:
At mihi succurrit pro Ganymede manus.
Ex opibus tantis veteri fidoque sodali
Das nihil et dicis Candide κοινὰ φίλων?

V.—Persius.

Vindicta postquam meus a praetore recessi,
Cur mihi non liceat, jussit quodcunque voluntas
Excepto si quid Masuri rubrica vetavit?
Disce: sed ira cadat naso, rugosaque sanna,
Dum veteres avias tibi de pulmone revello.
Non praetoris erat stultis dare tenvia rerum
Officia, atque usum rapidae permittere vitae:
Sambucam citius caloni aptaveris alto.
Stat contra ratio, et secretam gannit in aurem
Ne liceat facere id quod quis vitiabit agendo.
Publica lex hominum naturaque continet hoc fas,
Ut teneat vetitos inscitia debilis actus.
Diluis helleborum certo compescere puncto
Nescius examen? vetat hoc natura medendi.
Navem si poscat sibi peronatus arator
Luciferi rudis, exclamet Melicerta perisse
Frontem de rebus. Tibi recto vivere talo
Ars dedit? et veri speciem dignoscere calles,
Ne qua subaerato mendosum tinniat auro?
Quaeque sequenda forent, quaeque evitanda vicissim
Illa prius creta, mox haec carbone notasti?
Es modicus voti, presso lare, dulcis amicis?
Jam nunc adstringas, jam nunc granaria laxes?
Inque luto fixum possis transcendere numum
Nec gluto sorbere salivam Mercurialem?
Haec mea sunt, teneo, quum vere dixeris, esto
Liberque ac sapiens, praetoribus ac Jove dextro.

A 1. Comment on the passages you have translated generally, so as to show you fully understand them.

2. Explain the words in I. 1, "Senatus consultum pœnaque Cinciae legis." What was the date of the lex Cincia, and under what Emperors and with what modifications was it re-enforced?

3. Comment on the "Solenne jusjurandum" and the "Nuncupatio votorum," spoken of in I. 2. What was the quindecimvirale sacerdotium?

4. Explain the difference between the system of the Stoics and that of the Peripatetics.

5. State the historical fact alluded to in II. 2, and give a brief account of the career of the two Gracchi.

6. Specify the constitutional changes introduced by Sulla in his dictatorship.

7. What was the division of the provinces introduced by Augustus? Mention the chief differences between the administrators of the two kinds of provinces.

8. Briefly characterize the imperial constitution as settled by Augustus.

B. 1. Compare the style of Lucretius with that of Virgil, in point of verse-structure and of language, instancing, with regard to the latter, any expressions you may recollect borrowed by Virgil from Lucretius.

2. Mention the chief Latin classic authors down to the time of Claudian, giving the dates of their flourishing, and the chief events which took place during their lives.

27th September, 1855, 2 *o'clock, p.m.*

LATIN.—*Examiner, Charles Parsons Reichel, B.D.*

I. Translate the following passages into English prose :—

SUETONII D. OCTAVIUS CÆSAR.

1. Ex militaribus copiis legiones et auxilia provinciatim distribuit. Classem Miseni et alteram Ravennae ad tutelam superi et inferi maris collocavit. Certum numerum partim in urbis partim in sui custodiam adlegit : dimissa Caliguritanorum manu quam usque ad devictum Antonium, item Germanorum quam ad cladem Varianam inter armigeros circa se habuerat. Neque tamen unquam plures quam tres cohortes in urbe esse passus est, easque sine castris : reliquis in hiberna et aestiva circa finitima oppida dimittere assuerat. Quidquid autem ubique militum esset, ad certam stipendiorum praemiorumque formulam adstrinxit, definitis pro gradu cujusque et temporibus militiae et commodis missionum : ne aut aetate aut inopia post missionem sollicitari ad res novas possent. Utque perpetuo ac sine difficultate sumptus ad tuendos eos prosequendosque suppeteret, aerarium cum vectigalibus novis constituit. Et quo celerius ac sub manum annuntiari cognoscique posset quid in provincia quaque gereretur, juvenes primo modicis intervallis per militares vias, dehinc vehicula disposuit : commodius id visum est, ut qui a loco iidem perferrent literas, interrogari quoque, si quid res exigerent, possent.

2. Aleae rumorem nullo modo expavit, lusitque simpliciter et palam oblectamenti causa etiam senex : ac praeterquam Decembri mense aliis quoque festis profestisque diebus. Nec id dubium est autographa quadam epistola : "Coenavi" ait "mi Tiberi cum iisdem. Accesserunt convivae Vinicius et Silvius pater. Inter coenam lusimus γεροντικῶς et heri et hodie. Talis enim jactatis, ut quisque canem aut senionem miserat, in singulos talos singulos denarios in medium conferebat : quos tollebat universos qui Venerem jecerat." Et rursus aliis literis, "Nos, mi Tiberi, quinquatribus satis jucunde egimus, lusimus enim per omnes dies, forumque aleatorium calfecimus. Frater tuus magnis clamoribus rem gessit. Ad summam tamen perdidit non multum, sed ex magnis detrimentis paullatim retractus est. Ego perdidi viginti milia nummum meo nomine, sed quum effuse in lusu liberalis fuissem, ut soleo plerumque. Nam si quas manus remisi cuique exegissem aut retinuissem quod cuique donavi, vicissem vel quinquaginta milia. Sed hoc malo. Benignitas enim mea me ad coelestem gloriam efferet."

Comment on these passages : in explanation of the first of them, quoting the substance of statements from the First Book of the Annals of Tacitus ; and with regard to the second, explaining the game of dice as alluded to in it.

II. Translate freely into Latin prose the following passage :—

It would be an extremely profitable thing to draw up a short and well authenticated account of the habits of study of the most celebrated writers with whose style of literary industry we happen to be most acquainted. It would go very far to destroy the absurd and pernicious association of genius and idleness, by showing that the greatest poets, orators, statesmen, and historians—men of the most brilliant and imposing talents—have actually laboured as hard as the makers of dictionaries and the arrangers of indexes ; and that the most obvious reason why they have been superior to other men is, that they have taken more pains than other men. Gibbon was in his study every morning, winter and summer, at six o'clock. Burke was the most laborious and indefatigable of human beings. Leibnitz was never out of his library. Pascal killed himself by study. Cicero narrowly escaped death by the same cause. Milton was at his books with as much regularity as a merchant or an attorney ; he had mastered all the knowledge of his time : so had Homer. Raffaelle lived but thirty-seven years ; and in that short space carried the art so far beyond what it had before reached, that he appears to stand alone as a model to his successors. There are instances to the contrary ; but, generally speaking, the life of all truly great men has been a life of intense and incessant labour. They have commonly passed the first half of life in the gross darkness of indigent humility, overlooked, mistaken, contemned, by weaker men ; thinking while others slept, reading while others rioted, feeling something within them that told them they should not always be kept down among the dregs of the world ; and then, when their time was come, and some little accident has given them their first occasion, they have burst out into the light and glory of public life, rich with the spoils of time, and mighty in all the labours and struggles of the mind. Then do the multitude cry out, "A miracle of genius!" Yes, he *is* a miracle of genius, because he is a miracle of labour ; because, instead of trusting to the resources of his own single mind, he has ransacked a thousand minds ; because he makes use of the accumulated wisdom of ages, and takes as his point of departure the very last line and boundary to which science has advanced ; because it has ever been the object of his life to assist every intellectual gift of nature, however munificent and however splendid, with every resource that art could suggest, and every attention diligence could bestow.

SIDNEY SMITH.

GERMAN.—I.

A.

1. Name the great stock from which the Germanic or Teutonic languages are derived.
2. Into how many divisions does the Teutonic branch fall? Name them.
3. During which centuries was the Old High-German, also called Alemannic, spoken, and in which countries?
4. During what period does the Middle High-German range?
5. How do you account for the *Sun* being *feminine*, and the *Moon masculine*, in German?
6. What period may be called the golden age of German poetry?
7. Name the most celebrated productions of the so-called golden age of German poetry.
8. When did German poetry decline, and what were the causes of that decline?
9. Compare the Greek, German, French, and English articles with one another, and specify their characteristics.

B.

1. Put the sentence "*you ought to rise earlier*" into the past tense, and exhibit a reverse grammatical law in Latin, French, and German.
2. State the cases in which pleonasms are admissible in German, while in the same instances they are condemned in English and French.
3. State the peculiarities of the verb in a German sentence with respect to its position.
4. What difference is there between *kennen* and *wissen?*
5. Name the prepositions which govern both the *dative* and *accusative* in German, and illustrate the difference by comparing Latin, German, and English.
6. Explain the pronouns *mein, dein, seiner*, in *Vergis mein nicht!—Ich gedenke dein;—Erinnerst du dich seiner?*

II.

Translate into German:—

I have undertaken to write the history of Rome, from its earliest period to the time when Cæsar Augustus was acknowledged as the sovereign of the whole Roman world. I must begin at the time when settlers from various nations united together and founded a new people; and my goal will not be reached until I arrive at the period when this people had subjected millions to its sway, imparting to them its language and laws; when Rome was mistress of the world, from "the rising to the going down of the sun;" and when the last of the kingdoms arising out of Alexander's conquests had become a Roman province. In the early period, so firmly established were the Roman institutions, and so faithfully maintained from age to age, that although few trustworthy notices of heroic individuals have been preserved, we still possess materials from which we may induce certain general conclusions respecting the social economy of the nation; but in the latter period we shall find this once compact and powerful state dissolving into a confused assemblage of many peoples, and hastened toward entire disorganization.

NIEBUHR'S *Roman History.*

FRENCH.—I.

A.

1. Relate shortly the history of the French language, and of the two great dialects into which it was formerly divided, noticing the origin of its name.
2. When did the French or Anglo-Norman element first appear in the English language?
3. Which are the earliest lasting monuments of the history of French literature?
4. Which are the general characteristics of the first French verse-writers?
5. How does the poetry of France differ from that of other countries?
6. In how far does Lewis XIV. deserve credit for the high degree of perfection which French literature attained during his reign?

B.

1. State all you know respecting the flexibility of the past participle in French.
2. Translate into French: "Why do you not make him rise earlier?—Why do you not make them learn their lessons?"
3. Translate into French: "Will you be kind enough to introduce me to them?—Will you be kind enough to introduce them to me?"
4. What is the meaning of "*C'était à qui lui rendrait des services?*
5. Translate into French: "What has become of the children?—I do not know what will become of them."
6. What verbs require the infinitive following to be preceded by the preposition *à* in French? State the case in general terms.
7. Name as many as you know of the verbs which require the infinitive following not to be preceded by any preposition whatever in French, though in English they be preceded by the preposition *to*.
8. State the use of the *imperfect* and of the *præterit* in French.

II.

Translate into French:—

It was the custom of Frederick the Great to rise at five o'clock in the morning, and sometimes earlier. He commonly dressed his hair himself, and seldom employed more than two minutes for that purpose. His boots were put at his bed side, for he scarcely ever wore shoes. After he was dressed, his adjutant brought him a list of all the persons that had arrived at Potsdam, or had departed thence, and an account of whatever had occurred in the garrison. When he had delivered his orders to this officer, he retired into an inner cabinet, where he employed himself in private until seven o'clock. He then went into another apartment, where he drank coffee or chocolate, and here he found upon the table all the letters addressed to him. After reading all these letters, he wrote hints or notes in the margin of those which his secretaries were to answer. None of the answers, however, were sent off till they had been read, or many of them signed, by the king. At one o'clock he sat down to dinner. He had no carver; but did the honours of the table himself, like a private gentleman.

TORVERS's *History of the Reign of Frederick II.*

ITALIAN.—I.

A.

1. What Italian writer has been the favourite poet of Europe, and for what reasons?
2. What was the general character of the Italian poets in the latter half of the sixteenth century?
3. Relate what you know of *Tasso's* life.
4. Under what circumstances was his *Gierusalemme Liberata* finished?
5. Wherein does the chief excellence of the *Gierusalemme Liberata* consist, and which are its defects?
6. What is the character of the Italian poets of the seventeenth century?
7. When did Bojardo live, and which is his principal work?
8. What century deserves to be called the *golden age* of Italian literature, and for what reasons?

B

1. State the difference between "*Io l'ho* VEDUTA *depingere*" and "*Io l'ho* VEDUTO *depengere;*" in both cases *l'* standing for *la.*
2. When is the infinitive in Italian preceded by the preposition *da?* Give some examples.
3. Translate into Italian: "I do not think that we have been seen."
4. What difference is there between "*Un bicchiere* DA *vino*" and "*Un bicchiere* DI *vino,*" "*Che hai tu saputo* DI *lui*" and "*Che hai tu saputo* DA *lui?*"
5. What pronouns in Italian are called *affissi,* and why are they so called?
6. State what you know respecting the pronoun "*loro.*"
7. When do the pronouns *mi, ti, ci,* etc., change the vowel *i* into *e;* and when are two personal pronouns so contracted as to form but one word in Italian.
8. Translate into English: "*Gli vene fatto di correggerlo.*"

II.

Translate into Italian:—

Industry is not only the instrument of improvement, but the foundation of pleasure. Nothing is so opposite to the true enjoyment of life as the relaxed and feeble state of an indolent mind. He who is a stranger to industry may possess, but he cannot enjoy, for it is labour only which gives the relish of pleasure. It is the appointed vehicle of every good man. It is the indispensable condition of our possessing a sound mind in a sound body. Sloth is so inconsistent with both, that it is hard to determine whether it be a greater foe to virtue or to health and happiness. Inactive as it is in itself, its effects are fatally powerful.

BLAIR—*On the Duties of the Young.*

28th September, 1855, 9 *o'clock, a.m.*

COURSE II.—ENGLISH PHILOLOGY AND CRITICISM.—*Examiner, Rev. C. F. Darley, A.M*

1. The popular account of Hengist and Horsa's invasion of Britian has elements which are fictional or traditional rather than historical and true. Adduce full evidence confirming this statement, and approximate to the real state of the case.
2. Mention the various dissimilarities—whether as regards boundaries, dialects, literature, nomenclature, &c.,—that existed in the early Saxon times, between the Saxon of the Continent and the Saxon of England. Answer this question fully.
3. According to Mr. Garnett, the ancient language of Gaul is Cambrain rather than Gælic; and the evidence for this lies in a certain set of facts. Mention these facts and explain them.
4. Give a full account of the Dual Number as exemplified in Hebrew, Latin, Greek, Anglo-Saxon, German, Danish, Swedish, Old Norse, Iceland.
5. Mention the derivations of the following words: "any," "which," "such," "ilk," "aught," "each," "either," "one," (as in the phrase, "*one*" does so and so).
6. Account for the letter "l" in the word "could;" give the true Anglo-Saxon form and enumerate the remaining forms of the verb "can" in Anglo-Saxon.

THE CANTERBURY TALES.

A clerk ther was of Oxenforde also,
That unto logike hadde long ygo,
As lene was his hors as is a rake,
And he was not right fat, I undertake;
But loked holwe and therto soberly,
Ful thredbare was his overest courtepy,
For he hadde geten him yet no benefice,
Ne was nought worldly to have an office;
For him was lever han at his beddes hed,
A twenty bokes, clothed in black or red,
Of Aristotle and his philosophie,
Than robes, riche, or fidel, or santrie;
But all be that he was a philosophre,
Yet hadde he but little gold in cofre,
But all that he might of his friends hente,
On bokes and on lerning he it spente,
And besily gan for the soules praie,
Of hem that gave him wherwith to scolaie.
Of studie toke he moste cure and hede,
Not a word spake he more than was nede,
And that was said in forme and reverence,
And short, and quike, and ful of high sentence.
Souning in moral vertue was his speche,
And gladly wolde he lerne, and gladly teche.

A SERGEANT OF THE LAWE, ware & wise,
That often hadde yben at the paruis.
Ther was also ful riche of excellence,
Discrete he was, and of gret reverence;
He semed swiche, his words were so wise,
Justice he was ful often in assise,
By patent and by pleine commissioun,
For his science, and for his high renoun.
Of fees and robes had he many on,
So grete a pourchasour was no wher non;
All was fee simple to him in effect,
His pourchasing might non ben in suspect.
Nowher so besy a man as he ther n'as,
And yet he semed besier than he was.
In termes hadde he cas and domes alle,
That fro the time of King Will weren alle;
Therto, he coude endite, and make a thing,
Ther coude no wight pinche at his writing;
And every statute, coude he, plaine, by rote.
He rode but homely in a medlee cote,
Girt with a seint of silk, with barres smale;
Of his array, tell I no lenger tale.

A FRANKELEIN was in this compagnie,
White was his berd, as is the daysie;
Of his complexion—he was sanguin,
Wel loved he, by the morwe, a sop in win:
To liven in delit was ever his wone,
For he was Epicures owen son,
That held opinion, that plein delit,
Was, veraily, felicite parfite.
An housholder, and that a grete was he,
Seint Julian, he was in his contree;
His brede, his ale, was alway after on,
A better envyned man was no wher non;
Withouten bake mete, never was his hous,
Of fish and flesh, and that so plenteous:
It snewed in his hous of mete and drink,
Of all deinties that men coud of thinke;
After the sondry sesons of the yere,
So changed he his mete and his soupere.
Full many a fat partrich hadde he in mewe,
And many a breme, and many a luce in stew;
Wo was his coke but if his sauce were
Poinant, and sharpe, and redy all his gere;
His table dormant in his halle alway,
Stode redy covered all the longe day.

At sessions ther was he lord and sire,
Ful often time he was knight of the shire;
An anelace and a gipciere, all of silk,
Heng at his girdel, white as morwe milk;
A shereve hadde he ben, and a contour,
Was no wher swich, a worthy Vavasour.

Render the above extracts into modern English, and point out any peculiarity of grammar or composition generally that may present itself.

28th September, 1855, 2 *o'clock, p.m.*

COURSE II.—ENGLISH PHILOLOGY AND CRITICISM.—*Examiner, Rev. C. F. Darley, A.M.*

1. Mention the work which, according to Warton and Tyrwhitt, is the principal source of the "Knight's Tale."

2. A portion of Chaucer's description of the Temple of Mars in the "Knight's Tale," is borrowed from a Latin poet. Name the poet, and quote or indicate the portion thus borrowed.

3. What comparatively modern poet has given a version of Chaucer's "Knight's Tale?"

ESSAY:—"The Knight's Tale."

29th September, 1855, 9 *o'clock, a.m.*

LOGIC.—*Examiner, Rev. James M'Cosh, LL.D.*

1. Give a general summary of the topics discussed in the "interpretation," the "prior analytics" and "posterior analytics" of Aristotle.

2. Give a psychological account of the formation of the logical "notion" or "conception." What is meant by higher and lower conceptions? What are the powers of a conception?

3. State and examine the distinction which has been drawn between immediate and mediate reasoning. In how many different forms may the proposition "man is responsible" be put, without the use of a middle term?

4. When is the predicate quantified in the common logic? It is proposed to quantify the predicate universally; what are the supposed advantages of this new scheme? Give reasons for or against it.

5. Mention some of the more famous notations of the syllogism, that is, modes by which the relations between the conceptions or terms may be represented to the eye, and examine the relative merits of these schemes.

6. Enunciate the logical principle of contradiction. Name some eminent philosophers who have made extensive use of it? Does the denial of mathematical truth involve a contradiction? When it is said that "the will is free," and that "volitions have a cause," are the two propositions contradictory?

7. Discuss the question as to whether laws are in nature itself or in the mind of the observer; and in doing so, point out the exact value of ideas or conceptions in scientific investigation. What is meant by the phrase "colligation of facts?" Is it superior to "co-ordination of facts?"

8. Are there ideas and conceptions involved in physical investigation which cannot be derived from experience? Specify the ideas or conceptions of this description supposed to be involved in the mechanical sciences? Can they enable us to make mechanical science strictly demonstrative?

9. What are the precise ends proposed to be accomplished by the formula of inductive logic, and the criterion of inductive truth recommended by Whewell, and the canons of induction proposed by Mill? Can they accomplish these ends? Examine their relative merits.

10. How is a natural classification of material objects, organic and inorganic, distinguished from an artificial one? What advantages does the one possess above the other?

11. Whence arises our belief in the permanence of the laws of nature? Can we conceive the laws of nature to be changed?

29th September, 1855, 2 *o'clock, p.m.*

METAPHYSICS.—*Examiner, Rev. James M'Cosh, LL.D.*

1. Name the principal schools of philosophy in the Pre-Socratic period of ancient Greece, indicate the favourite speculations of each of these schools, and state particularly what we know, and from what sources, of the tenets of the Pythagorean or Italic school.

2. Give an analysis of any philosophic work of Plato with which you may be acquainted; and in doing so, point out what you regard as his method of inquiry and his principles.

3. Name the principal sects in ancient Greece and Rome subsequent to the age of Socrates. Sketch briefly the peculiarities of each, and take a critical review of the manner and method of the Academics.

4. Give a historical and critical account of the senses in which the word "idea" has been employed, and of the parts which it has played in philosophy, in ancient and modern times, among British and Continental philosophers.

5. Examine the following maxims and trace them to their authors: (1.) Nihil est in intellectu quod non prius fuerit in sensu. (2.) Nihil est in intellectu quod non prius fuerit

in sensu, nisi intellectus ipse. (3.) Nihil est in sensu quod non prius fuerit in intellectu. Did Locke adopt the first of these? What seems to be the precise meaning of the second? Does it suffice to express the full facts?

6. What is the precise method followed professedly, or in fact, by Kant, in his "Critick of Pure Reason?" Is it the same with that of Bacon or Descartes? Illustrate and examine that method.

7. What are the functions of the pure reason according to Kant? What are the paralogisms of the pure reason? Examine, in an especial manner, his critical remarks upon the soul considered as a substance.

8. Wherein did Fichte differ from Kant? Did, or did not, Fichte legitimately follow out the principles of Kant? How may the excessive subjective tendency of both be most successfully met?

9. Wherein did Dr. Thomas Brown agree with, and wherein did he depart from, the school of Reid? Can he be identified with the Sensational School of France?

10. Give a sketch of the controversy between Cousin and Hamilton as to the "finite" and "infinite," the "conditioned" and the "unconditioned."

1st October, 1855, 9 *o'clock, a.m.*

JURISPRUDENCE.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. How do you account for the same subjects (laws of inheritance, partnership, and insolvency, for example), being discussed in both economical and juridical treatises? and how do you distinguish the questions peculiar to each science?

2. Are there any general principles applicable to define the limits of the functions of central and local government?

3. What are the most effectual provisions the laws can make to secure national subsistence and abundance?

4. What are the limits to the right of primogeniture in England, and the principal arguments for and against the right so restricted?

5. Are there any expenses attending law proceedings in general, and any expenses attending certain proceedings in the Court of Chancery in particular, which should be borne by the suitors?

6. Explain the origin and policy of the usury laws, and the considerations which led to their repeal?

7. Laws may be retrospective in their operation, although in terms referable only to future transactions.

8. "Since we assign *an invisible origin to positive law*, we must abandon every documentary proof of it," (*Savigny*). Explain the words in Italics.

9. "The criminal law," observes Savigny, "makes earlier and greater progress than the civil law." How is this fact to be accounted for?

10. What are, according to Reddie's classification, the "primary divisions of private law"?

11. On what grounds does Bentham object to the establishment of courts of peculiar and exclusive jurisdiction?

12. State briefly the considerations which should determine the number and distribution of courts of justice in any locality.

1st October, 1855, 2 *o'clock, p.m.*

POLITICAL ECONOMY.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. *a.* What are the principal causes which have tended to raise the price of land in the present century?

b. What are the principal causes which have tended to lower the price of land in the present century?

2. The business of insurance against fire and shipwreck could not exist without the occurrence of such accidents. Upon whom do the losses occasioned by the destruction of insured property fall?

3. What are the economic advantages of recruiting by voluntary enlistment instead of by a conscription?

4. "If there were a tax on all commodities proportioned to their value, there would be a disturbance of value, some rising and some falling" (*J. S. Mill*). Explain and prove this.

5. "A tax on profits, like a tax on rent, must fall wholly on the payer. All profits being alike affected, no relief can be obtained by a change of employments." . . . . "Any tax levied on the wages of skilled labour falls on those who pay it; they have no means of relieving themselves at the expense of any other class" (*J. S. Mill*). Is it true that a tax on profits or on skilled labour must fall exclusively upon those sources of income, for the reasons stated by Mr. Mill?

6. "It is obviously the same advantage to a nation to have a considerable portion of its revenue derived from crown lands as it is to have its charitable institutions supported by separate property of their own" (*Alison—History of Europe*).

a. Is it an advantage to a nation to have its public revenue derived from crown lands?

b. Is it an advantage to it to have its charitable institutions supported by separate property?

7. Explain the following phrases :—
   a. A high rate of exchange.
   b. Exchequer bills.
   c. Public deposits.
   d. Dead weight annuity.
   e. Increase of rest (in the Bank accounts).
8. Deviations of the real exchange from par may arise from either of two causes.
9. Describe briefly the causes which determine the natural amount of the currency.
10. *a.* How were the issues of the Bank of England regulated during the suspension of cash payments?
   b. How, from 1819 until 1844?
   c. How have they been regulated since 1844?
11. State the chief objections to government loans for defraying the expenses of a war.
12. Are there any occasions on which a loan is, on either economic or purely financial grounds, preferable to a sudden increase of taxation?

26th September, 1855, 9 *o'clock, a.m.*

MIXED MATHEMATICS.—*Examiner, G. Johnstone Stoney, A.M.*

1. Deduce from mechanical principles the general equations for the equilibrium of flexible strings.
2. State a general method of investigating the strains on the constraints of a system at rest.
3. The determination of the attraction of a thin ellipsoidal layer, bounded by similar surfaces and of uniform density, on an external particle, may be reduced to finding that of another ellipsoidal layer passing through the particle. Prove this.
4. Prove that the normal and tangential components of the accelerating forces soliciting a free particle, are respectively $\frac{v^2}{\rho}$ and $\frac{d^2s}{dt^2}$, ρ being the radius of curvature.
5. Show that the number of the equations for the motion of a particle, restricted either to a given surface or a given curve, is sufficient for the problem.
6. Explain why the proof of the general equation of vis viva requires that the time should not enter explicitly into the equations of condition of the problem.
7. Show that there are three principal axes at every point of a body.
8. Investigate the strains to which a fixed axis of rotation is subjected during the motion.
9. Give a geometrical description, by means of the central ellipsoid, of the motion of a body spinning without external forces round a fixed point.
10. Show that it is essential to the equilibrium of gases that the temperature should be constant throughout each *couche de niveau.*

26th September, 1855, 2 *o'clock, p.m.*

MIXED MATHEMATICS.—*Examiner, G. Johnstone Stoney, A.M.*

1. Show that if the moon had an atmosphere, the relative displacement of a star and of the limb of the moon would be nearly twice the horizontal parallax of the star by the moon's atmosphere.
2. How are the intervals between the transits of Venus determined?
3. Give an outline of the method by which the variation of the moon may be deduced from mechanical considerations by Newton's method.
4. Interpret the terms in the expression of the tangent of the inclination of the moon's orbit—

$$s = k \sin(g\theta - \gamma) + \tfrac{3}{8} mk \sin\left\{(2-2m-g)\theta - 2\beta + \gamma\right\}$$

5. In investigating the lunar theory by successive approximations, explain how the co-efficient c, which gives the progression of the apsides, is introduced, and show that the process is valid.
6. Show that the field of view of a telescope or compound microscope will be a maximum when the pupil of the eye is placed at the image of the object lens formed by the eye-piece.
7. Show that a combination of thin lenses in contact, which is achromatic for any one distance, is so for all distances; and show that this is not the case if the lenses forming the achromatic system be not in contact.
8. Prove that the condition of a planatism for a system of two lenses is $\left(\frac{\alpha'}{\beta'}\right)^3 \kappa + \left(\frac{\beta}{\alpha'}\right)^3 \kappa' = 0$, where α' is the reciprocal of the distance of the radiant of the second lens, and β the reciprocal of the distance of the conjugate of the first lens, κ and κ' being the co-efficients of spherical aberration of the two lenses for those distances.
9. State the fundamental experiments on which Ampère's theory of electricity is founded; and deduce from them his expression for the action of two elements of currents on each other.
10. Given the space to be occupied by a coil; prove from Ohm's law that it would produce a maximum effect when the wire is of such a thickness that the resistance within the coil equals that without it, if the thickness of the insulating wrapper of the wire could be neglected.

1st October, 1855, 9 *o'clock, a.m.*

MATHEMATICS.—*Examiner, Rev. Robert Carmichael, A.M., F.T.C.D.*

1. Investigate the general expression for the sum of the m^{th} powers of the roots of the equation

$$x^n - px^{n-1} + qx^{n-2} - \&c. = 0.$$

2. Investigate the formula by which the *amount* of an annuity left unpaid for n years, at stated compound interest, is determined.

3. Hence investigate the formula by which the *present value* of an annuity, to be paid for n years, allowing compound interest, is determined.

4. If 12 white and 10 black balls be thrown into a bag, investigate the probability that a person will draw out first a white and then two black balls.

5. Investigate Lhuillier's formula for the spherical excess,

$$\tan \tfrac{1}{4} \mathrm{E} = \sqrt{\tan \tfrac{1}{2}s \tan \tfrac{1}{2}(s-a) \tan \tfrac{1}{2}(s-b) \tan \tfrac{1}{2}(s-c)}.$$

6. If ν be the radius of the circle inscribed in a spherical triangle, and ρ_1, ρ_2, ρ_3, the radii of the exscribed circles, prove that

$$\tan \nu \tan \rho_1 \tan \rho_2 \tan \rho_3 = \sin s \sin (s-a) \sin (s-b) \sin (s-c).$$

7. If r', r'', r''' be the semidiameters of an ellipse, parallel to the sides of an inscribed triangle, prove that

$$\mathrm{R} = \frac{r' r'' r'''}{a\, b}$$

where R is radius of the circle circumscribing the triangle.

8. Eliminate the arbitrary functions from the equation

$$z = \Phi(ay + bx). \quad \Psi(ay - bx).$$

9. Integrate the total differential equation

$$\mathrm{D}^2 y - 4\mathrm{D}y + 4y = ax^2.$$

10. Integrate the partial differential equation

$$x\mathrm{D}_x z + y\mathrm{D}_y z = ax^m y^n \sqrt{c^2 - z^2}.$$

1st October, 1855, 2 *o'clock, p.m.*

MATHEMATICS.—*Examiner, Rev. Robert Carmichael, A.M., F.T.C.D.*

1. Show that for any geodesic line traced upon the surface of a cone

$$x\mathrm{D}_x^2 x + y\mathrm{D}_y^2 y + z\mathrm{D}_z^2 z = 0,$$

the origin of co-ordinates being taken at the apex.

2. Hence show that the general equation of such a geodesic, in finite terms, is

$$r^2 = (s+c)^2 + d^2,$$

c, d, being arbitrary constants; and point out the geometric interpretation of this equation.

3. Prove that the general differential equation of a surface of revolution, described round an axis passing through the origin, and making with the axes of co-ordinates angles l, m, n, is

$$\left\{ (y \cos n - z \cos m)\, \mathrm{D}_x + (z \cos l - x \cos n)\, \mathrm{D}_y + (x \cos m - y \cos l)\, \mathrm{D}_z \right\} u = 0.$$

4. Integrate the partial differential equation—

$$ax\mathrm{D}_x u + by\mathrm{D}_y u + cz\mathrm{D}_z u - ku = \mathrm{A}x^m y^n z^p.$$

5. More generally investigate the solution of all partial differential equations of the type

$$\mathrm{F}(x\mathrm{D}_x, y\mathrm{D}_y, z\mathrm{D}_z, \&c.)u = \Sigma \mathrm{A}x^m y^n z^p \ldots .$$

6. Integrate, by a symmetrical method, the system of simultaneous differential equations

$$\left.\begin{aligned} \mathrm{D}_x x &= b_1 y + c_1 z \\ \mathrm{D}_y y &= a_2 x + c_2 z \\ \mathrm{D}_z z &= a_3 x + b_3 y \end{aligned}\right\}$$

7. Investigate, either by analysis or geometry, the general expression for the element of a surface in polar co-ordinates, namely—

$$d\sigma = \sqrt{r^2 \sin^2\theta + \sin^2\theta (\mathrm{D}_\theta r)^2 + (\mathrm{D}_\phi r)^2}\; r\, d\theta\, d\phi.$$

8. Hence deduce the quadrature of the surface

$$r = m\, e^{-\varphi} \cos\theta$$

within limits given by the intersections with the given surface of the cones

$$\theta_1 = a\phi \quad , \quad \theta_2 = b\phi,$$

and the planes

$$\phi_1 = \alpha^\circ \quad , \quad \phi_2 = \beta^\circ$$

26th September, 1855, 2 *o'clock, p.m.*

PHYSICS—*Examiner, G. Johnstone Stoney, A.M.*

1. From what observations and experiments is it known that gravity is a molecular property of matter?

2. Describe the construction of a Nicol's prism, and explain its action.

3. Give an account, in the wave theory, of the colours of thin plates of a double refracting crystal in the polariscope.

4. (*a*) Describe the nature of the vibrations of air which constitute sound, and mention why we are obliged, in the wave theory of light, to suppose the vibrations to be of a different kind.

(*b*) Show that the crossing of the rays of light at the focus of a lens, without interference, is not inconsistent with the emissive theory.

5. Account for the iris of colours seen at the boundary of total reflection.

6. Describe some method by which the tension of the vapour of water below the freezing temperature may be determined, and explain the principles upon which it depends.

7. What is Newton's law for the cooling of a body in a vacuum, and what is Dulong and Petit's?

8. If the north pole of a powerful magnet approach the north pole of a small magnet they will first repel one another, but on coming nearer will attract. Explain this.

9. There is no electric accumulation on the inside of a large conducting shell, yet the charge may be drawn off by introducing a wire through a hole and bringing it into contact with the inside. Explain this.

10. By what experiments can it be verified that the quantity of an electric current is inversely as the resistance?

11. Enumerate the reactions which take place in a cell of Grove's battery, and point out the causes which make its constancy so much greater than that of the ordinary copper and zinc batteries.

12. If the current of a small floating cell form a loop, and if the middle of a long bar magnet be held centrally within it, show that the floating cell will be in equilibrium which is stable or unstable, according to the position of the poles of the magnet.

27th September, 1855, 2 *o'clock, p.m.*

CHEMISTRY.—*Examiner, John Blyth, M.D.*

1. Define chemical affinity; point out its distinction from other modifications of attractive force; state some of the circumstances which modify its action.

2. What is meant by the "hypothetical density" of a vapour? How is the specific gravity of the vapour of C calculated.

Sp. gr. of C O_2 = 1·524
Sp. gr. of O = 1·1056

3. Explain Berzelius's electro-chemical theory.

4. What is the distinction between atoms and equivalents?

5. What would be the relative *atomic* weights of O and H if the opinion of Berzelius is correct, "that simple substances in the gaseous state contain equal numbers of atoms in equal volumes?" Show that this law does not hold good with compound gases.

6. What is the ultimate reason of the law of union among gases (viz., combination by volume)? How is the combining volume of the following gases ascertained.

	Specific Gravity.	Equivalent Weight.
H	= 0·0693, . . .	1
O	= 1·1056, . . .	8
Cl.	= 2·47, . . .	35·5
N O	= 1·525, . . .	22
$N H_3$	= 0·589, . . .	17
$C O_2$	= 1·524, . . .	22

7. What is the origin and constitution of the white crystals of the lead chamber in the manufacture of sulphuric acid?

8. Explain the process for separating the small quantity of silver contained in lead extracted from galena.

9. Explain by symbols the reactions which take place in the different stages of the process for manufacturing carbonate of soda according to Leblanc's method.

10. What is the nature of the purple of Cassius, and how is it prepared?

11. What products are obtained by condensing the vapours from a mixture of H Cl. and $N O_5$, exposed to heat?

12. What are the reactions on blue and red litmus of solutions of common phosphate and of pyrophosphate of soda before and after precipitation by nitrate of silver? Explain the reasons for these reactions.

13. What are the quantities of the proximate constituents, and of the ultimate elements contained in 100 parts of the sulphate of lead?

N. B.: Pb. = 103·8; S = 16; O = 8.

14. When oxygen combines with a metal in one proportion only to form a salifiable base, what number of atoms of metal and of oxygen is the compound assumed to contain? Explain the grounds for giving a different formula to alumina.

15. How is the atomic weight of an organic base ascertained?

16. Calculate the formula of crystallized morphia from the following data:—100 parts contain—

C = 67·33
H = 6·93
N = 4·62
O = 21·12

100·00

Atomic weight=303.

N.B.—Crystallized morphia contains two equivalents of water of crystallization.

17. What are the most indispensable conditions for the process of fermentation? What is the explanation of the process offered by Liebig?

18. What is the chemical constitution of common animal fat? Explain the theory of saponification.

28th September, 1855, 9 *o'clock, a.m.*

ZOOLOGY.—*Examiner, Dr. Melville.*

1. State the arguments for and against the *Lamarckian* theory of development.
2. Give an account of the *quinary* system of classification, and state the objections which have been urged against it.
3. Point out the relative importance of the various systems of organs in classification.
4. Give an account of the homology of the locomotive apparatus in *Vertebrata.*
5. Give a sketch of the laws which determine the distribution of animal forms.

BOTANY.

1. Give classified lists of the axial and foliar organs of a phanerogamous plant.
2. Describe the structure and mode of growth of the stem in acrogenous plants.
3. Refer the plants on the table to their respective natural orders, and describe each of them in technical terms.
4. State the views of the late Professor Forbes regarding the mode of origin of the British Flora.

28th September, 1855, 2 *o'clock, p.m.*

MINERALOGY, GEOLOGY, AND PHYSICAL GEOGRAPHY.

Examiner, J. Beete Jukes, M.A., F.R.S.

1. Define the sciences mineralogy, geology, and palæontology, and show their relations to each other.
2. What do you mean by the word "cleavage" in mineralogy, and what in geology?
3. Give a special description of geological cleavage, distinguishing it from "lamination" and "foliation," and also from "joints."
4. To how many systems of crystalline forms, depending on the length and position of their axes, can all crystals be reduced?
5. Name and describe those systems.
6. Enumerate the simple minerals which most abundantly enter into the composition of rocks, distinguishing those that principally form igneous from those that form aqueous rocks.
7. Write out, in order, the subdivisions of the carboniferous system of the northern part of Ireland, as given by Dr. Griffith in his geological map, pointing out the differences there shown to exist between the carboniferous rocks of the north and those of the south of Ireland.
8. State the general argument of Lyell's Principles of Geology, giving any details you may recollect in support of this argument or any part of it.
9. Taking the Mediterranean and the Black Sea, the Baltic Sea and the Arctic Ocean, as part of the basin of the Atlantic, and the Indian Ocean and its dependencies as part of the basin of the Pacific, what relation do you trace between these two great basins and the position of the principal mountain chains, and the direction of the largest rivers of the world?

EXAMINATION FOR THE DEGREE OF B.A.

18th September, 1855, 9 *o'clock, a.m.*

LATIN.—*Examiner, Charles Parsons Reichel, B.D.*

Translate any two of the following extracts:—

TERENCE.—ADELPHI.

Aeschinus. Occidunt me quidem, dum nimis sanctas nuptias
Student facere: in apparando consumunt diem.
Demea. Quid agitur, Aeschine? *Ae.* Ehem, pater mi, tu hic eras?
D. Tuus hercle vero et animo et natura pater:
Qui te amat plus, quam hosce oculos. Sed cur non domum
Uxorem accersis? *Ae.* Cupio: verum hoc mihi morae 'st
Tibicina, et hymenaeum qui cantent. *D.* Eho,
Vin' tu huic seni auscultare? *Ae.* Quid? *D.* Missa haec face,
Hymenaeum, turbas, lampadas, tibicinas:
Atque hanc in horto maceriam jube dirui,
Quantum potest: hac transfer: unam fac domum:
Traduce et matrem et familiam omnem ad nos. *Ae.* Placet.
Pater lepidissime. *D.* Euge, jam lepidus vocor.
Fratri aedes fient perviae: turbam domum
Adducet, sumptum admittet: multa: quid mea?
Ego lepidus ineo gratiam. jube nunc iam
Dinumeret ille Babylo viginti minas.

Syre, cessas ire ac facere? *Syrus.* Quid ego? *D.* Dirue.
Tu illas abi et traduce. *Geta.* Di tibi, Demea,
Benefaciant, quum te video nostrae familiae
Tam ex animo factum velle. *D.* Dignos arbitror.
Quid tu ais? *Ae.* Sic opinor. *D.* Multo rectiu 'st
Quam illam puerperam hac nunc duci per viam
Aegrotam. *Ae.* Nil enim vidi melius, mi pater.
D. Sic soleo. Sed eccum, Micio egreditur foras.

TERENCE.—PHORMIO.

Demipho. Nostrapte culpa facimus ut malis expediat esse:
Dum nimium dici nos bonos studemus et benignos.
Ita fugias ne praeter casam, quod aiunt. nonne id sat erat,
Accipere ab illo injuriam? etiam argentum 'st ultro objectum:
Ut sit qui vivat, dum aliud aliquid flagiti conficiat.
Geta. Planissime. *D.* Iis nunc praemium est, qui recta prava faciunt.
G. Verissime. *D.* Ut stultissime quidem illi rem gesserimus.
G. Modo ut hoc consilio possiet discedi, ut istam ducat.
D. Etiam idne dubium 'st? *G.* Haud scio hercle, ut homo 'st, an mutet animum.
D. Hem, mutet autem? *G.* Nescio: verum, si forte, dico.
D. Ita faciam, ut frater censuit, ut uxorem ejus huc adducam:
Cum ista ut loquatur. tu Geta, abi prae: nuntia hanc venturam.
G. Argentum inventum 'st Phaedriae: de jurgio siletur:
Provisum est, ne in praesentia haec hinc abeat: quid nunc porro?
Quid fiet? in eodem haesitas luto: vorsura solvis:
Praesens quod fuerat, in diem malum abiit: plagae crescunt,
Nisi prospicis. nunc hinc domum ibo: ac Phanium edocebo,
Ne quid vereatur Naustratam neque ejus orationem.

VIRGIL.—ÆNEID, BOOK VI.

Ecce gubernator sese Palinurus agebat
Qui Libyco nuper cursu, dum sidera servat,
Exciderat puppi mediis effusus in undis.
Hunc ubi vix multa moestum cognovit in umbra,
Sic prior alloquitur: Quis te, Palinure, deorum
Eripuit nobis, medioque sub aequore mersit?
Dic age. Namque mihi, fallax haud ante repertus,
Hoc uno responso animum delusit Apollo,
Qui fore te ponto incolumem, finesque canebat
Venturum Ausonios. En haec promissa fides est?
Ille autem: Neque te Phoebi cortina fefellit,
Dux Anchisiada, nec me deus aequore mersit:
Namque gubernaclum, multa vi forte revulsum,
Cui datus haerebam custos, cursusque regebam,
Praecipitans traxi mecum. Maria aspera juro,
Non ullum pro me tantum cepisse timorem,
Quam tua ne, spoliata armis, excussa magistro,
Deficeret tantis navis surgentibus undis.
Tres Notus hibernas immensa per aequora noctes
Vexit me violentus aqua: vix lumine quarto
Prospexi Italiam summa sublimis ab unda.
Paullatim adnabam terrae: jam tuta tenebam,
Ni gens crudelis madida cum veste gravatum,
Prensantemque uncis manibus capita aspera montis,
Ferro invasisset, praedamque ignara putasset.
Nunc me fluctus habet, versantque in litore venti.

HORACE.—SATIRES.

Saepe stilum vertas, iterum quae digna legi sint
Scripturus: neque te ut miretur turba labores,
Contentus paucis lectoribus. An tua demens
Vilibus in ludis dictari carmina malis?
Non ego: nam satis est equitem mihi plaudere, ut audax,
Contemtis aliis, explosa Arbuscula dixit.
Men' moveat cimex Pantilius? aut cruciet quod
Vellicet absentem Demetrius? aud quod ineptus
Fannius Hermogenis laedat conviva Tigelli?
Plotius et Varius Maecenas Virgiliusque
Valgius et probet haec Octavius optimus atque
Fuscus, et haec utinam Viscorum laudet uterque:
Ambitione relegata te dicere possum
Pollio, te Messalla tuo cum fratre; simulque
Vos, Bibule et Servi; simul his te candide Furni:

Complures alios, doctos ego quos et amicos
Prudens praetereo, quibus haec, sint qualiacunque
Arridere velim, doliturus si placeant spe
Deterius nostra. Demetri, teque Tigelli,
Discipularum inter jubeo plorare cathedras.
I puer, atque meo citus haec subscribe libello.

Tacitus.—Germania.

De minoribus rebus principes consultant, de majoribus omnes, ita tamen ut ea quoque quorum penes plebem arbitrium est, apud principes pertractentur. Coeunt, nisi quid fortuitum et subitum inciderit, certis diebus, cum aut inchoatur luna ant impletur: nam agendis rebus hoc auspicatissimum initium credunt. Nec dierum numerum, ut nos, sed noctium computant. Sic constituunt, sic condicunt. Nox ducere diem videtur. Illud ex libertate vitium, quod non simul nec ut jussi conveniunt, sed et alter et tertius dies cunctatione coeuntium absumitur. Ut turbae placuit, considunt armati. Silentium per sacerdotes, quibus tum et coercendi jus est, imperatur. Mox rex vel princeps prout aetas cuique, prout nobilitas, prout decus bellorum, prout facundia est, audiuntur, auctoritate suadendi potius quam jubendi potestate. Si displicuit sententia, fremitu aspernantur: sin placuit, frameas concutiunt. Honoratissimum assensus genus est armis laudare.

Tacitus.—Agricola.

Ipsi Britanni delectum ac tributa et injuncta imperii munera impigre obeunt, si injuriae absint: has aegre tolerant, jam domiti ut pareant, nondum ut serviant. Igitur primus omnium Romanorum divus Julius cum exercitu Britanniam ingressus, quanquam prospera pugna terruerit incolas ac litore potitus sit, potest videri ostendisse posteris, non tradidisse. Mox bella civilia et in rem publicam versa principum arma, ac longa oblivio Britanniæ etiam in pace. Consilium id divus Augustus vocabat, Tiberius praeceptum. Agitasse Caium Caesarem de intranda Britannia satis constat, ni velox ingenio, mobilis paenitentia, et ingentes adversus Germanos conatus frustra fuissent. Divus Claudius auctor operis, transvectis legionibus auxiliisque, et assumpto in partem rerum Vespasiano; quod initium venturae mox fortunae fuit. Domitae gentes, capti reges, et monstratus fatis Vespasianus.

Cicero.—In Catilinam I.

Nunc ut a me, patres conscripti, quandam prope justam patriae querimoniam detester ac deprecer, percipite quaeso diligenter quae dicam, et ea penitus animis vestris mentibusque mandate. Etenim si mecum patria, quae mihi vita mea multo est carior, si cuncta Italia, si omnis respublica loquatur: M. Tulli, quid agis? tune eum quem hostem esse comperisti, quem ducem belli futurum vides, quem exspectari imperatorem in castris hostium sentis, auctorem sceleris, principem conjurationis, evocatorem servorum et civium perditorum exire patieris ut abs te non emissus ex urbe sed immissus in urbem esse videatur? Nonne hunc in vincula duci, non ad mortem rapi, non summo supplicio mactari imperabis? Quid tandem impedit te? Mosne majorum? at persaepe etiam privati in hac republica perniciosos cives morte multarunt: an leges, quae de civium Romanorum supplicio rogatae sunt? at nunquam in hac urbe ii qui a republica defecerunt, civium jura tenuerunt. An invidiam posteritatis times? praeclaram vero Populo Romano refers gratiam, qui te, hominem per te cognitum, nulla commendatione majorum, tam mature ad summum imperium per omnes honorum gradus extulit, si propter invidiam aut alicujus periculi metum, salutem civium tuorum negligis. Sed, si quis est invidiae metus, num est vehementius severitatis ac fortitudinis invidia quam inertiae et nequitiae pertimescenda? An, quum bello vastabitur Italia, vexabuntur urbes, tecta ardebunt, tum te non existimas invidiae incendio conflagraturum?

Sallust.—Jugurtha.

Igitur Jugurtha contra decus regium cultu quam maxime miserabili cum Cassio Romam venit: ac, tamenetsi in ipso magna vis animi erat, confirmatus ab omnibus quorum potentia aut scelere cuncta gesserat; C. Baebium tribunum plebis magna mercede parat cujus impudentia contra jus et injurias omnes munitus foret. At C. Memmius, advocata concione, quanquam regi infesta plebes erat, et pars in vincula duci jubebat, pars, ni socios sceleris aperiret, more majorum de hoste supplicium sumi; dignitati quam irae magis consulens, sedare motus et animos mollire: postremo confirmare fidem publicam per sese inviolatam fore. Post, ubi silentium cepit, producto Jugurtha verba facit: Romae Numidiaeque facinora ejus memorat: scelera in patrem fratresque ostendit: quibus juvantibus quibusque ministris egerit, quanquam intellegat Populus Romanus, tamen velle manifesta magis ex illo habere; si vera aperiret, in fide et clementia populi Romani magnam spem illi sitam: sin reticeat, non sociis saluti fore; sese suasque spes corrupturum. Dein, ubi Memmius dicundi finem fecit, et Jugurtha respondere jussus est, C. Baebius, tribunus plebis, quem pecunia corruptum supra diximus, regem tacere jubet: ac, tamenetsi multitudo quae in concione aderat, vehementer accensa, terrebat eum clamore, vultu, saepe impetu, atque aliis omnibus quae ira fieri amat, vicit tamen impudentia. Ita populus ludibrio habitus ex concione discessit: Jugurthae Bestiaeque, et caeteris quos illa quaestio exagitabat, animi augescunt.

1. Write remarks on the passages you have translated; noticing any syntactical peculiarities, and explaining the allusions, historical or otherwise, that may occur in them.

2. Give the principal parts of the verbs cerno, farcio, jubeo, liceor, moneo, neco, necto, pario, posco, premo, prendo, surgo.

3. Write out the Latin cardinals, ordinals, and distributives, from one to twenty.

4. Write down the chief defective verbs.

5. Give the names of the Roman magistracies; and state the occasions on which they are said to have been introduced, and the dates of their institution.

6. Re-translate into Latin prose:

Restrained therefore by this discontent, and because it seemed folly to take care of another man's business at his own hazard, he dispatched messengers to Bocchus to demand that he should not become an enemy to the Roman people without cause; that he had every opportunity of uniting himself with them in an alliance and friendship which would be more profitable than war: though he relied on his own strength, he ought not to change certainties for uncertainties: that every war was easily undertaken, but ended with the greatest difficulty: that the beginning and ending thereof were not in the hands of the same person; that any one, even a coward, could begin: but that it was dropped when the victorious party chose; and that, therefore, he should have regard to his own interest and that of his kingdom, and not mix up his own prosperous condition with the ruined condition of Jugurtha.

18th September, 1855, 2 *o'clock, p.m.*

GREEK.—*Examiner, William Nesbitt, A.M.*

Translate any two of the following passages:—

I.—1. ILIAD, III., 203–224:

Τὴν δ' αὖτ' Ἀντήνωρ πεπνυμένος ἄντιον ηὔδα·
"ὦ γύναι, ἦ μάλα τοῦτο ἔπος νημερτὲς ἔειπες.
ἤδη γὰρ καὶ δεῦρό ποτ' ἦλυθε δῖος Ὀδυσσεὺς,
σεῦ ἕνεκ' ἀγγελίης, σὺν Ἀρηϊφίλῳ Μενελάῳ·
τοὺς δ' ἐγὼ ἐξείνισσα καὶ ἐν μεγάροισι φίλησα,
ἀμφοτέρων δὲ φυὴν ἐδάην καὶ μήδεα πυκνά.
ἀλλ' ὅτε δὴ Τρώεσσιν ἐν ἀγρομένοισιν ἐμιχθεν,
στάντων μὲν Μενέλαος ὑπείρεχεν εὐρέας ὤμους,
ἀμφω δ' ἑζομένω, γεραρώτερος ἦεν Ὀδυσσεύς.
ἀλλ' ὅτε δὴ μίθους καὶ μήδεα πᾶσιν ὕφαινον,
ἦτοι μὲν Μενέλαος ἐπιτροχάδην ἀγόρευεν,
παῦρα μὲν, ἀλλὰ μάλα λιγέως· ἐπεὶ οὐ πολύμυθος
οὐδ' ἀφαμαρτοεπὴς, ἦ καὶ γένει ὕστερος ἦεν.
ἀλλ' ὅτε δὴ πολύμητις ἀναΐξειεν Ὀδυσσεὺς,
στάσκεν, ὑπαὶ δὲ ἴδεσκε κατὰ χθονὸς ὄμματα πήξας,
σκῆπτρον δ' οὔτ' ὀπίσω οὔτε προπρηνὲς ἐνώμα,
ἀλλ' ἀστεμφὲς ἔχεσκεν, ἀϊδρεϊ φῶτι ἐοικώς·
φαίης κε ζάκοτόν τε τιν' ἔμμεναι ἄφρονά τ' αὖτως.
ἀλλ' ὅτε δὴ ῥ' ὄπα τε μεγάλην ἐκ στήθεος ἵει
καὶ ἔπεα νιφάδεσσιν ἐοικότα χειμερίῃσιν,
οὐκ ἂν ἔπειτ' Ὀδυσῆϊ γ' ἐρίσσειε βροτὸς ἄλλος.
οὐ τότε γ' ὧδ' Ὀδυσῆος ἀγασσάμεθ' εἶδος ἰδόντες."

2. HERODOTUS, I. 45:

παρῆσαν δὲ μετὰ τοῦτο οἱ Λῦδοὶ φέροντες τὸν νεκρὸν, ὄπισθε δὲ εἵπετό οἱ ὁ φονεύς. στὰς δὲ οὗτος πρὸ τοῦ νεκροῦ παρεδίδου ἑωυτὸν Κροίσῳ, προτείνων τὰς χεῖρας, ἐπικατασφάξαι μιν κελεύων τῷ νεκρῷ, λέγων τήν τε προτέρην ἑωυτοῦ συμφορὴν, καὶ ὡς ἐπ' ἐκείνῃ τὸν καθήραντα ἀπολωλεκὼς εἴη, οὐδέ οἱ εἴη βιώσιμον. Κροῖσος δὲ τούτων ἀκούσας τόν τε Ἄδρηστον κατοικτείρει καὶ περ ἐὼν ἐν κακῷ οἰκηίῳ τοσούτῳ, καὶ λέγει πρὸς αὐτόν· "ἔχω, ὦ ξεῖνε, παρὰ σεῦ πᾶσαν τὴν δίκην, ἐπειδὴ σεωυτοῦ καταδικάζεις θάνατον. εἷς δὲ οὐ σύ μοι τοῦδε τοῦ κακοῦ αἴτιος, εἰ μὴ ὅσον ἀέκων ἐξεργάσαο, ἀλλὰ θεῶν κού τις, ὃς μοι καὶ πάλαι προεσήμαινε τὰ μέλλοντα ἔσεσθαι." Κροῖσος μέν νυν ἔθαψε, ὡς οἰκὸς ἦν, τὸν ἑωυτοῦ παῖδα· Ἄδρηστος δὲ ὁ Γορδίεω τοῦ Μίδεω, οὗτος δὴ ὁ φονεὺς μὲν τοῦ ἑωυτοῦ ἀδελφεοῦ γενόμενος φονεὺς δὲ τοῦ καθήραντος, ἐπεί τε ἡσυχίη τῶν ἀνθρώπων ἐγίνετο περὶ τὸ σῆμα, συγγινωσκόμενος ἀνθρώπων εἶναι τῶν αὐτὸς ᾔδεε βαρυσυμφορώτατος, ἑωυτὸν ἐπικατασφάζει τῷ τύμβῳ.

3. ÆSCHYLUS, PROMETHEUS VINCTUS, 226–245:

ὃ δ' οὖν ἐρωτᾷ', αἰτίαν καθ' ἥντινα
δικίζεταί με, τοῦτο δὴ σαφηνιῶ.
ὅπως τάχιστα τὸν πατρῷον ἐς θρόνον
καθέζετ', εὐθὺς δαίμοσιν νέμει γέρα
ἄλλοισιν ἄλλα καὶ διεστοιχίζετο
ἀρχήν· βροτῶν δὲ τῶν ταλαιπώρων λόγον
οὐκ ἔσχεν οὐδέν', ἀλλ' ἀϊστώσας γένος
τὸ πᾶν ἔχρῃζεν ἄλλο φιτῦσαι νέον.
καὶ τοῖσιν οὐδεὶς ἀντέβαινεν πλὴν ἐμοῦ.
ἐγὼ δ' ἐτόλμησ'· ἐξελυσάμην βροτοὺς
τοῦ μὴ διαῤῥαισθέντας εἰς Ἄιδου μολεῖν.
τῷ τοι τοιαῖσδε πημοναῖσι κάμπτομαι,
πάσχειν μὲν ἀλγεινοῖσιν, οἰκτραῖσιν δ' ἰδεῖν·
θνητοὺς δ' ἐν οἴκτῳ προθέμενος, τούτου τυχεῖν

οὐκ ἠξιώθην αὐτὸς, ἀλλὰ νηλεῶς
ὧδ' ἐρρύθμισμαι, Ζηνὶ δυσκλεὴς θέα.

ΧΟΡΟΣ.

σιδηρόφρων τε κἀκ πέτρας εἰργασμένος
ὅστις, Προμηθεῦ, σοῖσιν οὐ συνασχαλᾷ
μόχθοις, ἐγὼ γὰρ οὔτ' ἂν εἰσιδεῖν τάδε
ἔχρῃζον εἰσιδοῦσά τ' ἠλγύνθην κέαρ.

4. Euripides, Medea, 1035–1055:

νῦν δ' ὅλωλε δὴ
γλυκεῖα φροντίς. σφῷν γὰρ ἐστερημένη
λυπρὸν διάξω βίοτον ἀλγεινόν τ' ἐμοί.
ὑμεῖς δὲ μητέρ' οὐκέτ' ὄμμασιν φίλοις
ὄψεσθ', ἐς ἄλλο σχῆμ' ἀποστάντες βίου.
φεῦ φεῦ· τί προσδέρκεσθέ μ' ὄμμασιν, τέκνα
τί προσγελᾶτε τὸν πανύστατον γέλων;
αἰαῖ· τί δράσω; καρδία γὰρ οἴχεται,
γυναῖκες, ὄμμα φαιδρὸν ὡς εἶδον τέκνων.
οὐκ ἂν δυναίμην· χαιρέτω βουλεύματα
τὰ πρόσθεν· ἄξω παῖδας ἐκ γαίας ἐμούς.
τί δεῖ με πατέρα τῶνδε τοῖς τούτων κακοῖς
λυποῦσαν ἀυτὴν δὶς τόσα κτᾶσθαι κακά;
οὐ δῆτ' ἔγωγε. χαιρέτω βουλεύματα.
καί τοι τί πάσχω; βούλομαι γέλωτ' ὀφλεῖν
ἐχθροὺς μεθεῖσα τοὺς ἐμοὺς ἀζημίους;
τολμητέον τάδ', ἀλλὰ τῆς ἐμῆς κάκης,
τὸ καὶ προέσθαι μαλθακοὺς λόγους φρενί.
χωρεῖτε, παῖδες, ἐς δόμους. ὅτῳ δὲ μὴ
θέμις παρεῖναι τοῖς ἐμοῖσι θύμασιν,
αὐτῷ μελήσει· χεῖρα δ' οὐ διαφθερῶ.

5. Xenophon, Anabasis, II., ss. 16–20:

Πρόξενος δὲ ὁ Βοιώτιος ευθὺς μὲν μειράκιον ὢν, ἐπεθύμει γενέσθαι ἀνὴρ τὰ μέγαλα πράττειν ἱκανός· καὶ διὰ ταύτην τὴν ἐπιθυμίαν ἔδωκε Γοργίᾳ ἀργύριον τῷ Λεοντίνῳ. ἐπεὶ δὲ συνεγένετο ἐκείνῳ, ἱκανὸς ἤδη νομίσας εἶναι καὶ ἄρχειν, καὶ φίλος ὢν τοῖς πρώτοις μὴ ἠττᾶσθαι εὐεργετῶν, ἦλθεν εἰς ταύτας τὰς σὺν Κύρῳ πράξεις· καὶ ᾤετο κτήσεσθαι ἐκ τούτων ὄνομα μέγα, καὶ δύναμιν μεγάλην, καὶ χρήματα πολλά· τούτων δ' ἐπιθυμῶν, σφόδρα ἔνδηλον αὖ καὶ τοῦτον εἶχεν, ὅτι τούτων οὐδὲν ἂν θέλοι κτᾶσθαι μετὰ ἀδικίας, ἀλλὰ σὺν τῷ δικαίῳ καὶ καλῷ ᾤετο δεῖν τούτων τυγχάνειν, ἄνευ δὲ τούτων μή. ἄρχειν δὲ καλῶν μὲν καὶ ἀγαθῶν ἱκανὸς ἦν· οὐ μέντοι οὐτ' αἰδῶ τοῖς στρατιώταις ἑαυτοῦ οὔτε φόβον ἱκανὸς ἐμποιῆσαι, ἀλλὰ καὶ ᾐσχύνετο μᾶλλον τοὺς στρατιώτας ἢ οἱ ἀρχόμενοι ἐκεῖνον· καὶ φοβούμενος μᾶλλον ἦν φανερὸς τὸ απεχθάνεσθαι τοῖς στρατιώταις, ἢ οἱ στρατιῶται τὸ ἀπιστεῖν ἐκείνῳ. ᾤετο δὲ αρκεῖν πρὸς τὸ ἀρχικὸν εἶναι καὶ δοκεῖν, τὸν μὲν καλῶς ποιοῦντα ἐπαινεῖν, τὸν δὲ ἀδικοῦντα μὴ ἐπαινεῖν. τοιγαροῦν αὐτῷ οἱ μὲν καλοὶ κἀγαθοὶ τῶν συνόντων εὔνοι ἦσαν, οἱ δ' ἄδικοι ἐπεβούλευον, ὡς εὐμεταχειρίστῳ ὄντι.

6. Lucian, Mythological Dialogues.—Hephæstus and Zeus.

ΗΦΑΙ. ὅρα, ὦ Ζεῦ, μὴ κάκον τι ποιήσωμεν· ὀξὺς γὰρ ὁ πέλεκύς ἐστι, καὶ οὐκ ἀναιμωτὶ, οὐδὲ κατὰ τὴν Εἰλείθυιαν, μαιώσεταί σε. Ζ. Κατένεγκε μόνον, ὦ Ἥφαιστε θαῤῥῶν· οἶδα γὰρ ἐγὼ τὸ συμφέρον. ΗΦΑΙ. Ἄκων μὲν, κατοίσω δὲ· τί γὰρ χρὴ ποιεῖν, σοῦ κελεύοντος; τί τοῦτο; κόρη ἔνοπλος; μέγα, ὦ Ζεῦ, κακὸν εἶχες ἐν τῇ κεφαλῇ· εἰκότως γοῦν ὀξύθυμος ἦσθα, τηλικαύτην ὑπὸ τὴν μήνιγγα παρθένον ζωογονῶν, καὶ ταῦτα ἔνοπλον· ἦπου στρατόπεδον, οὐ κεφαλὴν, ἐλελήθεις ἔχων· ἡ δὲ πηδᾷ, καὶ πυῤῥιχίζει, καὶ τὴν ἀσπίδα τινάσσει, καὶ τὸ δόρυ πάλλει, καὶ ἐνθουσιᾷ· καὶ, τὸ μέγιστον, καλὴ πάνυ καὶ ἀκμαία γεγένηται ἤδη ἐν βραχεῖ· γλαυκῶπις μὲν, ἀλλὰ κοσμεῖ καὶ τοῦτο ἡ κόρυς· ὥστε, ὦ Ζεῦ, μαίωτρά μοι ἀπόδος, ἐγγυήσας μοι αὐτήν. Ζ. ἀδύνατα αἴτεις, ὦ Ἥφαιστε· παρθένος γὰρ ἀεὶ θέλει μένειν· ἐγὼ γοῦν τό γε ἐπ' ἐμοὶ οὐδὲν ἀντιλέγω. ΗΦΑΙ. τοῦτ' ἐβουλόμην· ἐμοὶ μελήσει τὰ λοιπά· καὶ ἤδη συναρπάσω αὐτήν. Ζ. ἓι σοι ῥᾴδιον οὕτω ποίει· πλὴν οἶδα, ὅτι ἀδυνάτων ἐρᾷς.

II.—1. Give a brief account of the life and writings of any of the authors from whom the above extracts are taken.

2. Write short notes upon the passages which you have translated, explanatory of any difficulties which occur in them.

3. Turn into Attic Greek the extract from Herodotus given above.

4. Give examples of Greek derivative nouns ending in *ευς, τηρ, τωρ*, and *της*; in *μος, μη*, and *μα*; in *ια, της*, and *συνη*; and state the respective meanings which these terminations convey.

5. Decline a noun of what is called the Attic declension through all its cases.

6. Point out the difference between the Greek and the Latin form of reduplication.

7. How does the aorist differ in meaning from the imperfect?

8. Distinguish between the following expressions:—"*ὁ κροκόδειλος ὄννχας καρτερους ἔχει*," and "*ὁ κροκόδειλος καρτερους τους ὄνυχας ἔχει.*"

9. What are the legitimate positions of the demonstrative pronouns, when joined with substantives which have the article prefixed? How do you translate these pronouns when the substantives to which they refer are anarthrous?

10. Frame a sentence illustrating the difference between *οὐ* and *μή*.

11. What is the nature of the relation between the subjunctive and optative moods?

12. Enumerate the several forms of hypothetical propositions in Greek, stating the meaning of each.

13. What are the exceptions to the rule, that neuters plural take a verb in the singular? Upon what principle does the rule rest?

19th September, 1855, 2 *o'clock, p.m.*

SPECIAL GROUP B.—ENGLISH PHILOLOGY & CRITICISM.—*Examiner, Rev. C. F. Darley, A.M.*

1. "Whenever two or more populations speaking different languages are placed along side of one another, under the same government, there is a tendency which sooner or later will, to a greater or less extent, become operative towards the establishment of uniformity of speech. No such tendency arises in the case of contiguous populations living under different governments."

Give exemplifications of this fact.

2. In what year was it ordered by Act of Parliament that all trials in the King's Courts should be conducted in English?

3. At what period, and in the Reign of what Prince, was the above Act of Parliament substantially carried into effect?

4. French, up to a late period, continued to be the language in which the public reports of law cases were usually drawn up. Approximate to the date.

5. Mr. Guest holds that there have been four systems employed at different periods to mark the quantity, or rather quality, of our English vowels. Explain these several systems, and give examples.

6. The full account of the peculiarity of the final "E," in Chaucer's works, may be comprised in five propositions. Explain these propositions at large.

7. State some of the principal peculiarities that distinguish the grammar of Chaucer's English from that of the English of the present day.

LITERATURE.

Give a running commentary on the works and genius of Addison, Swift, Bolingbroke and Defoe, regarded as prose writers; and on the works and genius of Burns, Coleridge, Southey, and Scott, as regarded as poets; and quote or indicate such passages in the works of the above-mentioned prose writers and poets, as you may conceive to be amongst the best specimens.

19th September, 1855, 9 *o'clock, a.m.*

MODERN LANGUAGES.—*Examiner, Professor Frings, Ph.D.*

FRENCH.—I.

Translate into French:—

I received, one morning, a message from poor Goldsmith, that he was in great distress, and, as it was not in his power to come to me, begging that I would come to him as soon as possible. I sent him a guinea, and promised to come to him directly. I accordingly went as soon as I was dressed, and found that the landlady had arrested him for his rent, at which he was in a violent passion. I perceived that he had already changed my guinea, and had a bottle of Madeira and a glass before him. I put the cork into the bottle, desired he would be calm, and began to talk to him of the means by which he might be extricated. He then told me that he had a novel ready for the press, which he produced to me. I ran through it, and saw its merit; told the landlady I should soon return; and, having gone to a bookseller, sold it for sixty pounds. I brought Goldsmith the money, and he discharged his rent. This novel was the Vicar of Wakefield.

BOSWELL'S *Life of Dr. Johnson.*

Translate:—

Nous n'envisageons guère en France la superstition que de son côté ridicule. Elle a pourtant ses racines dans le coeur de l'homme, et la philosophie elle-même, lorsqu' elle s'obstine, à n'en pas tenir compte, est superficielle et présomptueuse. La nature n'a point fait de l'homme un être isolé, destiné seulement à cultiver la terre et à la peupler, et n'ayant, avec tout ce qui n'est pas de son espèce, que les rapports arides et fixes que l'utilité l'invite à établir entre elle et lui. Une grande correspondance existe entre tous les êtres moraux et physiques. Il n'y a personne, je le pense, qui, laissant errer ses regards sur un horizon sans bornes, ou se promenant sur les rives de la mer que viennent battre les vagues, ou levant les yeux vers le firmament parsemé d'étoiles, n'ait éprouvé une sorte d'émotion qu'il lui était impossible d'analyser ou de définer.

BENJAMIN CONSTANT.

III.

Ce n'est pas la fortune qui domine le monde: on peut le demander aux Romains, qui eurent une suite continuelle de prospérités quand ils se gouvernèrent sur un certain plan et une suite noninterrompue de revers lorsqu' ils se conduisirent sur un autre. Il y a des causes générales, soit morales, soit physiques, qui agissent dans chaque monarchie, l'élèvent, la maintiennent, ou la précipitent; tous les accidents sont soumis à ces causes; et si le hasard d'une bataille, c'est-à-dire une cause particulière, a ruiné un état, il y avait une cause générale qui faisait que cet état devait périr par une seule bataille: en un mot l'allure principale entraîne avec elle tous les accidents particuliers.

MONTESQUIEU.

GERMAN.—I.

Translate into German :—

Germany and Italy advanced together in the same course of intellectual development and freedom until the era of the Reformation. The great Italian artists, in their paintings and sculptures, worked as truly for the liberation of the human mind as our German scholars in the revival of classical studies. Without such preparations, our Reformation would have been a mere ecclesiastical schism, having no great influence on general intellectual progress. But after the Reformation, Germany and Italy were separated in their interests; for, while the latter remained devoted to the fine arts, the former employed its best minds in philosophy. This separation was unfortunate: for, German thought, divided from the poetical and beautiful, produced only dry metaphysical systems; while, on the other side, the Italian passion for the fine arts degenerated into a frivolous amusement for *dillettanti*.

Translate :—

Es war zehn Uhr als die Truppen die Stadt verließen. In diesem Augenblick wurden die Kriegsschiffe, die man nicht fortbringen konnte, so wie auch das Zeughaus, in Brand gesteckt; eine sehr kühne Unternehmung, die erstaunliche Schwierigkeiten hatte. Der Ritter Sidney Smith, der schon im letzten russisch-schwedischen Kriege große Beweise von nautischen Kenntnissen und Entschlossenheit gegeben hatte, erhielt diesen schrecklichen Auftrag, wozu ihm bloß eine Kriegsschaluppe und sechs Kanonenböte gegeben wurden, drei englische und drei spanische. Mit diesen fuhr er nach dem Zeughause, das er von verbündeten Truppen zwar wohl besetzt fand, allein die sehr zahlreichen französischen Schiffsarbeiter waren hier bereits im Tumult; sie hatten die weiße Fahne abgenommen und die dreifarbige aufgesteckt. Smith war zu schwach, diesem Tumult Einhalt zu thun; überdies war seine Zeit sehr kostbar; er dachte daher bloß an die Ausführung seines Vorhabens.

V. ARCHENHOLZ.

III.

Der Alte nahm ihm ruhig die Feder aus der Hand, spritzte sie aus, und legte sie hin.—Sieh! fing er dann an: es wird mir von Tage zu Tage immer ärgerlicher, daß ich einen Menschen von so weitläufigem Kopfe und von so engem Herzen zum Sohne haben muß. Einen Menschen, der für seinen Putz, sein Vergnügen, der im Spiel ein Ducätchen nach dem andern, auch oft wohl dutzendweise, vertändelt, der nur noch gestern bis in die sinkende Nacht gespielt hat, und der, wenn er eine großmüthige Handlung thun sollte, vielleicht keines Thalers Herr wäre;—einen Menschen, der ewig ledig bleibt, weil keine Parthie ihm reich genug scheint, und der doch immer übrig hat, zu fahren, zu reiten, den Cavalier zu machen, Sammt und Stickereyen zu tragen.—Ich muß wohl nicht Unrecht haben, fuhr er nach einigem Stillschweigen fort; denn du kannst mir nicht antworten.

ENGEL'S *Lorenz Stark*.

ITALIAN.—I.

Translate into Italian :—

As soon as the lady had ordered coffee, fruit, and cakes, for the refreshment of her guests, she retired to her apartment to peruse the letter which explained the motive of their visit, and she was not a little surprised at finding that the father of the young ladies had accepted the post of governor to one of the East India islands; and that, not knowing whether the situation would be advantageous for young women, he had resolved to leave his daughters under the care of their aunt for some time at least. This intelligence both astonished and pained the old dame, who began to apprehend that the accounts she had heard of her brother-in-law's extravagance, since the death of his amiable wife, were but too well founded, and imagined that he had expatriated himself in order to retrieve a fortune which he could not have lost but in gambling.

Translate :—

Voi dovete sapere che in Parigi fu già un gentiluomo, il quale per povertà divenuto era mercatante; ed eragli sì bene avvenuto della mercatanzia, che egli n'era fatto ricchissimo. E avea della sua Donna un figliuol, senza più, il quale egli aveva nominato Lodovico. E perchè, egli alla nobiltà del padre, e non alla mercatanzia, si traesse, non l'aveva il padre voluto mettere ad alcun fondaco, ma l'avea messo ad esse con altri gentiluomini al servizio del Re di Francia; là dove egli assai di be' costumi e di buone cose aveva apprese. E quivi dimorando, avvenne che certi cavalieri i quali tornati erano dal Sepolcro, sopravvegnendo a un ragionamento di giovani, nel quale Lodovico era, e udendogli fra sè ragionare delle belle donne di Francia, e d'Inghilterra e d'altre parti del mondo, cominciò l'un di loro a dir che per certo di quanto mondo egli aveva cerco e di quante donne vedute aveva mai, una simigliante alla moglie d'Egano de' Galluzzi di Bolognia, Madonna Beatrice chiamata, veduta non avea di bellezza.

BOCCACCIO.

III.

Necessaria è talvolta la guerra, ciò è ben vero; ma è gran vergogna dell' uman genere, che sia inevitabile in certi casi. Voi, o Regi, ah non dite, doversi la guerra desiderare per acquistar gloria; poichè non esiste vera gloria in imprese opposte ai sentimenti di umanità. Chiunque preferisce a questi la propria fama è un mostro di orgoglio, e non uomo: falsa sarà la gloria, che potrà acquistarsi; imperocchè la vera retrovasi soltanto nella moderazione, e nella bonta di cuore. Potrà eziandio essere adulato per contentare la di lui folle

vanità; ma quando vorrassi parlar sinceramente, si dirà sempre in segreto, aver lui meritata tanto meno la gloria, quanto più l'ha bramata con ingiusto appetito: non devon gli uomini rispettarlo, poichè egli gli ha stimati sì poco da prodigare il lor sangue per brutale ambizione.

BUONAJUTI.

MATHEMATICS.—*Examiner, Rev. Robert Carmichael, A.M., F.T.C.D.*

1. Multiply 3·076 by ·007, and divide 4·732 by ·04; in each case explaining the process employed by the aid of vulgar fractions.
2. Add together $2\frac{1}{2}$, $3\frac{1}{3}$, $4\frac{1}{4}$.
3. Find the greatest common measure of 153741 and 987.
4. Extract the square root of 28·7296.
5. An income of £1,500 per annum is derived from the investment of £47,125 in English 3 per cents.; calculate the price of stock at the time of investment.
6. Calculate the present worth of a bill for £1,500, drawn 18th June, at four months; discounted 1st September, at 3 per cent.
7. Given the equation

$$\frac{3x+1}{7}+\frac{8x+5}{3}=x+2$$

find the value of x.
8. Find the values of x and y from $3x-8y=19$, $2x-9y=9$.
9. Solve the quadratic $x^2-12x+36=1$.
10. (*a*) Prove that triangles on the same base and between the same parallels are equal.
    (*b*) Hence from any point in the base of a triangle draw a line which will bisect the triangle.
11. (*a*) Prove that the sum of the squares of the sides of a parallelogram is equal to the sum of the squares of its diagonals.
    (*b*) Investigate the more general theorem for any quadrilateral.
12. On a given right line describe a segment of a circle which shall contain an angle equal to a given one.
13. In a given circle inscribe a regular pentagon.
14. The logarithm of 35627 being 4·5517793, find the logarithm of 35·627.
15. Investigate the formula—

$$\text{Sin. } \tfrac{1}{2}\,\text{A}=\sqrt{\frac{(s-b)\,(s-c)}{bc}}.$$

16. Calculate the value of tan. 60° to three places of decimals.

20th September, 1855, 2 *o'clock, p.m.*

LOGIC AND METAPHYSICS.—*Examiner, Rev. James M'Cosh, LL.D.*

I.—LOGIC.

Answer three (or four) questions from each of the two following groups:—

GROUP FIRST.

1. What is the nature of abstraction and generalization? How are they related, and wherein do they differ? How do they stand related to denomination or the use of signs, and especially of words? In answering these questions, you are at liberty to discuss the views which have been entertained by eminent philosophers.
2. Give a philosophical account of the nature of logical division, showing whether it proceeds upon the extension or comprehension (intension) of a notion. Give the rules of division.
3. What is the dictum *de omni et nullo?* What is the precise value set upon it by Archbishop Whately? What by Mr. J. S. Mill? Can the mind reason from particulars to particulars without the use of a major premiss or universal proposition?
4. On what principle does the division of syllogism according to figures proceed? Is it a mere useless subtlety? What is the nature of the second figure? When do arguments naturally fall into this figure? Why must the conclusion in this figure be negative?
5. It is argued that the Christian religion cannot come from God because it is not universal; and it is replied that many of the blessings which come from God, such as health, are not universal. Put the argument and the reply into the syllogistic form, indicate the moods and figures, and if either of the syllogisms is not in the first figure, reduce it to that figure.
6. Examine the following logically:—
   a. The worship of false gods is a sin; every sin ought to be punished; and as the magistrate is appointed to punish sin, so he ought to punish the worship of false gods.
   b. The study of formal logic would be useful, provided men could not reason without the syllogism; but as God "has given them a mind that can reason without being instructed in the methods of syllogizing," we may conclude that the Aristotelian logic is useless. The same may be said of the logic of Bacon, inasmuch as men proceeded by induction before Lord Bacon lived.

Group Second.

1. What is the account given by Bacon of the empirical and rational modes of inquiry, and of his own method as distinguished from these?

2. What are the various meanings of the word "induction?" What is meant by induction in the logic of Bacon? In what relation does induction stand to deduction? In what sciences is induction of most value? In what sciences deduction? When do inductive sciences become deductive.

3. What are the canons of induction proposed by living writers? Enunciate the canon of the method of difference, and give an illustration of it.

4. What are the various meanings of the word "analogy?" What is the difference between an argument drawn from mere analogy (such as that in behalf of the plurality of worlds), and an argument drawn from a scientific induction (as, for example, from the law of gravitation)?

5. What is the nature of final cause? In answering this question, you are invited to notice and criticise the views of Aristotle, Bacon, and Descartes, and say what proofs modern physiological research furnishes in behalf of final cause.

II.—Metaphysics.

Answer three (or four) questions from each of the two following groups:—

Group First.

1. What is the nature of sensation? What is the nature of perception? Can they be distinguished from one another, or how do they stand related to each other?

2. Give some account of the retentive and reproductive powers of the mind, and especially of the memory; and say how the memory is connected with, and dependent upon, the laws of association, the common classifications of which are to be mentioned.

3. Explain the various meanings in classical English and in philosophy of the word "conception," and give a psychological account of the different mental phenomena which have been designated by that phrase.

4. In what different senses has the word "reason" been employed? What is meant by reason when it is distinguished from the understanding? Can this distinction be psychologically and philosophically carried out?

5. Give your view of conscience considered as a mental power or process, and intersperse criticisms upon the opinions which have been entertained on this subject by some of the most eminent of modern philosophers.

6. Give some account of the peculiarities of the feelings or emotions, and say how they stand related to the other powers of the mind, and what you regard as a good, or as the preferable, classification of them.

Group Second.

1. What famous hypotheses were devised in the second half of the seventeenth century to account for the mutual operation of mind and body? Have you any criticisms to offer upon them? Has modern psychological or physiological research been able to clear up, or throw any light upon, the connexion between mind and body?

2. State what appear to you to be the precise views of Descartes and Locke as to innate ideas.

3. Locke calls in intuition in the fourth book of his Essay; what office does he seem to ascribe to it? Is his doctrine of intuition consistent with his doctrine as to innate ideas?

4. Locke derives all our ideas from sensation and reflexion. Mention the ideas which can not, according to opponents of Locke, be derived from these sources exclusively. Single out some one of these, and comment upon it, with reasons.

5. Give a historical and critical account of the views which have been entertained by modern philosophers as to the nature and genesis of the ideas of space and time; and, in doing so, give your own opinion with reasons, and say whether you look upon space and time as having an objective existence.

6. Can every thing be proven? If not, what are we entitled, in philosophical discussion, to assume without proof, and under what conditions to assume it? State the views on this subject of the school of Reid.

N.B.—In quoting, or referring to, any author, you are expected to name the treatise, and indicate, if not the precise year, at least the age in which it was written.

21st September, 1855, 9 *o'clock, a.m.*

Chemistry.—*Examiner, John Blyth, M.D.*

1. Explain the law of Mariotte, and state under what conditions it no longer holds good.

Convert $+104°$ and $-40°$ of Fahrenheit into the corresponding numbers on the scales of Reaumur and Celsius.

3. From the following data calculate the specific gravity of a substance soluble in water, but insoluble in oil of turpentine.

Weight in air	= 200
Weight in oil of turpentine	= 91
Sp. gr. of oil of turpentine	= 0·865

4. Explain shortly the general laws regulating chemical combination.
5. Give in symbols the mode of preparing chlorine by which the whole quantity is obtained in a gaseous form: state its general properties.
6. How is nitrogen prepared from ammonia? What precautions are required, and what product is apt to be formed in the process?
7. Describe the mode of preparation and the properties of the compounds of P and H.
8. Give in equivalents and in volumes the constituents of water, and explain the mode of determining its composition analytically and synthetically.
9. What is a salt? Give examples in symbols of haloid, sulphur, and oxysalts.
10. What is meant by combination by volume? Illustrate by examples.
11. What is the usual classification of the metals? State the relative solubility in water of the oxides and sulphides of the different classes, and mention the properties of the sulphides by which metallic salts can be separated into groups in analysis.
12. Separate into different analytical groups by general re-agents the following metals—potassium, barium, strontium, chromium, zinc, silver, and cadmium. Give the best special re-agent for each.
13. Give the best means for detecting in solution, nitric, phosphoric, chloric, and hydriodic acids.
14. Give in symbols the composition of the oxygen compounds of manganese, and state the progressive and ultimate effect produced on each by continued exposure in an open crucible to a strong heat.
15. Explain the theory of the process for extracting lead from galena.
16. Explain shortly the process for estimating C and H in organic substances containing N and S. State the precautions to be taken in conducting the analysis.
17. Give the formulæ of alcohol and aldehyde as hydrated oxides of compound radicals; describe the mode of preparation and the properties of the latter.
18. Explain the term "homologous series;" give examples from the alcohols and their derivatives, and state the most characteristic features of such series.
19. How is liquid hydrocyanic acid prepared?
20. Give the mode of preparation, and the properties of chloroform.

21st September, 1855, 2 *o'clock, p.m.*

NATURAL PHILOSOPHY.—*Examiner, G. Johnstone Stoney, A.M.*

1. A lever, 18 inches long, has a pivot through its centre, and weights of 5 and 6 lbs. are hung from its ends, where must an additional weight of 6 lbs. be hung to produce equilibrium?
2. Explain how wheels under a carriage reduce the work to be done in overcoming friction.
3. *a*. What is the velocity of a body which has fallen from rest through a vacuum for ten seconds?
   b. Through what distance has it in that time fallen?
4. The moon is more powerfully attracted by the sun than by the earth. Explain why she does not on this account part company with the earth.
5. The solar day is a little longer than the sidereal. Why? and, how may the difference be calculated?
6. If $\frac{1}{2}$ of a vessel be immersed when floating on sulphuric acid of sp. g. 1·8, and $\frac{2}{3}$ when floating on weak nitric acid, determine the sp. g. of the latter.
7. If the diameter of the piston of a hydraulic press be 10 inches, and that of the plunger of its pump $\frac{1}{4}$ inch, and the pump-handle a lever of 5 to 1, what pressure can a man produce with it who can work with a force of 120 lbs. on the pump-handle.
8. If the mercury in a barometer stand at 29″·8, when, if the vacuum were perfect, it should stand at 30″, what is the density of the air above the mercury?
9. Explain why the surface of shallow water is more readily frozen than that of deeper.
10. Show that an object viewed through a Galilean telescope will be seen erect, but inverted if viewed through a common astronomical telescope.
11. Describe some experiments which establish a difference between positive and negative electricities.
12. What are the chemical reactions in a voltaic cell of copper and zinc excited by water acidulated with sulphuric acid?

22nd September, 1855, 9 *o'clock, a.m.*

ZOOLOGY.—*Examiner, Dr. Melville.*

1. Enumerate the animal tissues; mention the leading physical and vital properties of each, and describe the microscopic structure of bone and muscle.
2. State the mode of circulation in *Fishes*, and point out the manner in which it may be converted into that which exists in *Reptiles*.
3. Give a tabular view of the classification of the animal kingdom, the orders included; and state the diagnostic characters of the sub-kingdoms or types.
4. Mention the characteristics of the different sub-types or classes of *Mollusca*, and give an example of each.

BOTANY.

1. Describe the structure of the vegetable cell; give the chemical composition of its principal constituents, and state the various modes of cell-multiplication.

2. Describe the mode of growth of the stem in *Dicotyledons* and *Monocotyledons;* also contrast the structure and mode of development of the woody bundle in each.

3. Give a sketch of the morphological relations of the different organs of a flowering plant.

4. Give a tabular view of the classes and sub-classes of the vegetable kingdom, according to the natural system, with their diagnostic characters.

5. Refer the plants on the table to their respective *Linnean* classes and orders.

22nd September, 1855, 2 *o'clock, p.m.*

PHYSICAL GEOGRAPHY.—*Examiner, J. Beete Jukes, M.A., F.R.S.*

1. Give the meaning of the terms "watershed," "contour line," "longitudinal and lateral valley," "snow line."

2. The land is for the most part divided into basins of drainage, which discharge their superfluous waters into the ocean. Mention those basins of drainage which do not discharge their waters into the ocean but into inland seas and salt lakes, and state the levels of the water in these lakes compared with that of the sea.

3. Why should these lakes be invariably salt, while lakes having an outlet to the ocean are fresh?

4. Give a brief account and explanation of the phenomena of "trade winds" and "monsoons."

5. Mention some of the principal mountain ranges of the world, their general direction, and that of the prevailing winds which traverse them either wholly or in part.

6. Give any instance or instances that occur to you of the climate of any large country or countries being influenced by, or depending on, this relation of mountain ranges and prevailing winds.

7. Describe the general structure of a volcanic mountain and the ordinary phenomena of volcanic action, giving any details of extraordinary eruptions that occur to you.

8. Mention any instances of a change having taken place, during historic times, in the relative level of land and sea in any part of the globe.

9. Give a brief description of a glacier and its "moraines."

10. Give a brief sketch of the physical geography of Ireland, mentioning—

(*a*) The principal groups of mountains, with the heights of their summits above the sea—

(*b*) The principal basins of drainage, with the name of the main, or arterial, river, and the place of its embouchure—

(*c*) The peculiarities in the climate of Ireland, and the cause or causes of these peculiarities.

24th September, 1855, 9 *o'clock, a.m.*

JURISPRUDENCE.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. How do you distinguish the laws of which Jurisprudence treats from those investigated by Political Economy.

2. Define public and private law, and explain the relation between them.

3. Explain the portions of the following passage printed in Italics:—"Such unquestionably ought to be the *two grand objects* both of the *historical and analytical schools of law*, and *the difference between them* will in reality be found to consist". . .—(*Inquiries in the Science of Law*, 2nd ed., p. 89).

4. "It has been justly observed that the writings of Mr. Bentham form, if not altogether a new, at least a very important era in the history of legal science," (*Inquiries, &c.*, p. 135); what were the principal services rendered to legal science by those writings?

5. "The distinction of law into *written* and *unwritten*, or more correctly into *statutory* and *common*, has a real foundation in nature, and flows from the different sources in which they originate," (*Inquiries, &c.*, p. 137); define the terms printed in Italics, and explain briefly the foundation of the distinction as maintained by Reddie, and the nature of the objections to it urged by Bentham.

6. Explain the nature of the distinction which exists in the English legal system between law and equity.

7. "We are gradually approaching the crisis of a necessary reformation, when our laws, like those of Rome, must be cast into the crucible. It would be a disgrace to the nineteenth century if England could not find her Tribonian," (*Hallam's History of the Middle Ages*); what species of law reform is here referred to, and what would be its chief advantages?

8. How did Lord Bacon propose to effect such a reform?

9. What is meant by *ex post facto* legislation, and on what grounds has the phrase been applied to the unwritten law of England?

10. What institutions retarded the progress of agriculture throughout Europe after the fall of the Roman Empire, according to Adam Smith?

11. It is, according to Adam Smith, a mistake to imagine that the territorial jurisdictions of the ancient proprietors of land took their origin from the feudal law?

12. How do you account for the origin of the difference of the laws of succession to real and personal property?

24th September, 1855, 9 *o'clock, a.m.*

POLITICAL ECONOMY.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. "In the price of corn, one part pays the rent of the landlord, another pays the wages of the labourers, and the third pays the profit of the farmer," (*Wealth of Nations*, Book i., chap. 6); point out and prove the error in this passage.

2. "The price of labour frequently rises in cheap years. The wages of both servants and journeymen frequently sink in dear years," (*Wealth of Nations*, Book i., chap. 8); how are these facts to be explained, and what economic fallacy do they disprove?

3. "The inequalities of wages and profit in different employments arise partly from certain circumstances in the employments themselves, and partly from the policy of Europe," (*Wealth of Nations*, Book i., chap. 10); explain this passage briefly.

4. "The proposition that in agriculture additional labour generally produces a less proportionate result is subject to material exceptions," (*W. R. Senior*); prove this proposition, and give examples of the exceptions.

5. What is the immediate effect of an increase of cultivation upon rent and tithes, respectively?

6. "The average and ordinary rates of profit in the different employments of stock are more nearly on a level than the wages of different sorts of labour," (*Wealth of Nations*, Book i., chap. 10); in what sense is this true, and in what sense erroneous?

7. "The revenue which consists of profit will, in the progress of improvement, bear a constantly increasing proportion to that which consists of wages;" what reason does Mr. Senior assign for this conclusion?

8. What are Adam Smith's four maxims with regard to taxes in general?

9. Explain the following phrases:—"direct and indirect taxation;" "excise duties;" "3 per cent. consols;" "unfunded debt."

10. What is meant by "a favourable balance of trade," and why called "favourable?"

11. What qualities render the precious metals the fittest of all commodities to serve as money?

12. What are the causes of *depreciation* in the case of a metallic and of a paper currency, respectively?

A.B. EXAMINATION FOR HONORS.

26th September, 1855, 9 *o'clock, a.m.*

GREEK.—*Examiner, William Nesbitt, A.M.*

I. Translate HERODOTUS, I., 185.

A. 1. Ἡ δὲ δὴ δεύτερον γενομένη ταύτης βασίλεια, τῇ οὔνομα ἦν Νίτωκρις, οἵτη δὲ συνετωτέρη γενομένη τῆς πρότερον ἀρξάσης τοῦτο μὲν μνημόσυνα ἐλίπετο τὰ ἐγὼ ἀπηγήσομαι, τοῦτο δὲ τὴν Μήδων ὁρῶσα ἀρχὴν μεγάλην τε καὶ οὐκ ἀτρεμίζουσαν, ἀλλ' ἄλλα τε ἀραιρημένα ἄστεα αὐτοῖσι, ἐν δὲ δὴ καὶ τὴν Νίνον, προεφυλάξατο ὅσα ἐδύνατο μάλιστα. πρῶτα μὲν τὸν Εὐφρήτην ποταμὸν ῥέοντα πρότερον ἰθὺν, ὅς σφι διὰ τῆς πόλιος μέσης ῥέει, τοῦτον ἄνωθεν διώρυχας ὀρύξασα οὕτω δή τι ἔποιησε σκολιὸν, ὥστε δὴ τρὶς ἐς τῶν τινὰ κωμέων τῶν ἐν τῇ Ἀσσυρίῃ ἀπίκνεεται ῥέων. τῇ δὲ κώμῃ οὔνομά ἐστι, ἐς τὴν ἀπικνέεται ὁ Εὐφρήτης, Ἀρδέρικκα. καὶ νῦν οἳ ἂν κομίζωνται ἀπὸ τῆσδε τῆς θαλάσσης ἐς Βαβυλῶνα, καταπλέοντες ἐς τὸν Εὐφρήτην ποταμὸν τρίς τε ἐς τὴν αὐτὴν ταύτην κώμην παραγίνονται καὶ ἐν τρισὶ ἡμέρῃσι. τοῦτο ἐν δὴ τοιοῦτο ἐποίησε, χῶμα δὲ παρέχωσε παρ' ἑκάτερον τοῦ ποταμοῦ τὸ χεῖλος ἄξιον θωύματος, μέγαθος καὶ ὕψος ὅσον τι ἐστί. κατύπερθε δὲ πολλῷ Βαβυλῶνος ὤρυσσε ἕλυτρον λίμνῃ, ὀλίγον τι παρατείνουσα ἀπὸ τοῦ ποταμοῦ, βάθος μὲν ἐς τὸ ὕδωρ ἀεὶ ὀρύσσουσα, εὖρος δὲ τὸ περίμετρον αὐτοῦ ποιεῦσα εἴκοσι τε καὶ τετρακοσίων σταδίων· τὸν δὲ ὀρυσσόμενον χοῦν ἐκ τούτου τοῦ ὀρύγματος ἀναισίμου παρὰ τὰ χείλεα τοῦ ποταμοῦ παραχέουσα. ἐπεί τε δὲ οἱ ὤρυκτο, λίθους ἀγαγομένη κρηπῖδα κύκλῳ περὶ αὐτὴν ἤλασε. ἐποίεε δὲ ἀμφότερα ταῦτα τόν τε ποταμὸν σκολιὸν καὶ τὸ ὄρυγμα πᾶν ἕλος, ὡς ὅ τε ποταμὸς βραδύτερος εἴη περὶ καμπὰς πολλὰς ἀγνύμενος, καὶ οἱ πλόοι ἐῶσι σκολιοὶ ἐς τὴν Βαβυλῶνα, ἔκ τε τῶν πλόων ἐκδέκηται περίοδος τῆς λίμνης μακρή. κατὰ τοῦτο δὲ εἴργαζετο τῆς χώρης τῇ αἵ τε ἐσβολαὶ ἦσαν καὶ τὰ σύντομα τῆς ἐκ Μήδων ὁδοῦ, ἵνα μὴ ἐπιμισγόμενοι οἱ Μῆδοι ἐκμανθάνοιεν αὐτῆς τὰ πρήγματα.

(*a*) How does Bähr defend the reading καταπλέοντες ἐς τὸν Εὐφρήτην?

(*b*) What is the primitive meaning of the word ἕλυτρον?

2. ξεῖνε Ἀθηναῖε, παρ' ἡμέας γὰρ περὶ σέο λόγος ἀπῖκται πολλὸς καὶ σοφίης εἵνεκεν τῆς σῆς καὶ πλάνης, ὡς φιλοσοφέων γῆν πολλὴν θεωρίης εἵνεκεν ἐπεληλύθας—κ. τ. λ.

The appearance of the seven wise men of Greece forms an epoch in Grecian literary history? What was the nature of their wisdom?

3. εἰσὶ δὲ πάντες Ἴωνες, ὅσοι ἀπ' Ἀθηνῶν γεγόνασι καὶ Ἀπατούρια ἄγουσι ὀρτήν.

What is the derivation of the word Ἀπατούρια? Give a brief account of this Ionic festival.

4. Ἄρπαγε, πρῆγμα τὸ ἄν σοι προσθέω μηδαμὰ παραχρήσῃ, μηδὲ ἐμέ τε παραβάλῃ καὶ ἄλλους ἑλόμενος ἐξ ὑστέρης ἑωυτῷ περιπέσῃς.

Translate. Explain the metaphor involved in the expression μὴ ἑωυτῷ περιπέσῃς.

5. καὶ ἐπὶ τούτῳ τῷ πύργῳ ἄλλος πύργος ἐπιβέβηκε καὶ ἕτερος μάλα ἐπὶ τούτῳ.

What is the meaning of *μάλα* in this sentence? Cite a parallel from the first book of Herodotus.

6. Explain the following constructions:—

(a) κατέβαινε λέγων. (b) τὴν πρώτην εἶναι. (c) Δαρείῳ δὲ δεινὸν ἐδόκεε, μὴ οὐ λαβεῖν αὐτά. (d) ἐπεὰν δὲ ἄριστα αὐτὴ ἑωυτῆς ἐνείκῃ. (e) ἄλλο δέ τι ἐξευρήκασι νέωστι γενέσθαι.

7. What is the dialect of Herodotus? Mention some of the anomalies which it presents, as exhibited in the best MSS.

B. 1. How does the method of Herodotus differ from that of his predecessors, the logographers?

2. What Greek writer first attempted a systematic chronology? What was the basis of his system, and how far did he attain precision, if we accept the testimony of Thucydides?

3. What principle of discrimination has Herodotus followed in testing the merit of mythical stories?

4. How has he modified the mythological mechanism of early prose history?

5. Herodotus has been characterized by an ancient critic as Ὁμηρικώτατος—Ὁμήρου ζηλωτής; justify this criticism by a reference to his writings.

6. State Herodotus's theory of the providential government of the world.

7. The manner in which it is worked out in detail is highly prejudicial to the authenticity of his narrative: a remarkable instance of this occurs in the first book?

8. Contrast Herodotus's conception of history with that of Thucydides.

II. Translate THUCYDIDES, I., 20, 21, 22.

A. 1. *Τὰ μὲν οὖν παλαιὰ τοιαῦτα εὗρον, χαλεπὰ ὄντα παντὶ ἐξῆς τεκμηρίῳ πιστεῦσαι. οἱ γὰρ ἄνθρωποι τὰς ἀκοὰς τῶν προγεγεννημένων, καὶ ἢν ἐπιχώρια σφίσιν ᾖ, ὁμοίως ἀβασανίστως παρ' ἀλλήλων δέχονται. . . . οὕτως ἀταλαίπωρος τοῖς πολλοῖς ἡ ζήτησις τῆς ἀληθείας, καὶ ἐπὶ τὰ ἑτοῖμα μᾶλλον τρέπονται. ἐκ δὲ τῶν εἰρημένων τεκμηρίων ὅμως τοιαῦτα ἄν τις νομίζων μάλιστα ἃ διῆλθον οὐχ ἁμαρτάνοι, καὶ οὔτε ὡς ποιηταὶ ὑμνήκασι περὶ αὐτῶν ἐπὶ τὸ μεῖζον κοσμοῦντες μᾶλλον πιστεύων, οὔτε ὡς λογογράφοι ξυνέθεσαν ἐπὶ τὸ προσαγωγότερον τῇ ἀκροάσει ἢ ἀληθέστερον, ὄντα ἀνεξέλεγκτα καὶ τὰ πολλὰ ὑπὸ χρόνου αὐτῶν ἀπίστως ἐπὶ τὸ μυθῶδες ἐκνενικηκότα, εὑρῆσθαι δὲ ἡγησάμενος ἐκ τῶν ἐπιφανεστάτων σημείων ὡς παλαιὰ εἶναι ἀποχρώντως. καὶ ὁ πόλεμος οὗτος, καίπερ τῶν ἀνθρώπων ἐν ᾧ μὲν ἂν πολεμῶσι τὸν παρόντα ἀεὶ μέγιστον κρινόντων, παυσαμένων δὲ τὰ ἀρχαῖα μᾶλλον θαυμαζόντων, ἀπ' αὐτῶν τῶν ἔργων σκοποῦσι δηλώσει ὅμως μείζων γεγενημένος αὐτῶν. καὶ ὅσα μὲν λόγῳ εἶπον ἕκαστοι ἢ μέλλοντες πολεμήσειν ἢ ἐν αὐτῷ ἤδη ὄντες, χαλεπὸν τὴν ἀκρίβειαν αὐτὴν τῶν λεχθέντων διαμνημονεῦσαι ἦν, ἐμοί τε ὧν αὐτὸς ἤκουσα καὶ τοῖς ἄλλοθέν ποθεν ἐμοὶ ἀπαγγέλλουσιν· ὡς δ' ἂν ἐδόκουν ἐμοὶ ἕκαστοι περὶ τῶν ἀεὶ παρόντων τὰ δέοντα μάλιστ' εἰπεῖν, ἐχομένῳ ὅτι ἐγγύτατα τῆς ξυμπάσης γνώμης τῶν ἀληθῶς λεχθέντων, οὕτως εἴρηται. τὰ δ' ἔργα τῶν πραχθέντων ἐν τῷ πολέμῳ οὐκ ἐκ τοῦ παρατυχόντος πυνθανόμενος ἠξίωσα γράφειν, οὐδ' ὡς ἐμοὶ ἐδόκει, ἀλλ' οἷς τε αὐτὸς παρῆν, καὶ παρὰ τῶν ἄλλων ὅσον δυνατὸν ἀκριβείᾳ περὶ ἑκάστου ἐπεξελθών. ἐπιπόνως δὲ εὑρίσκετο, διότι οἱ παρόντες τοῖς ἔργοις ἑκάστοις οὐ ταὐτὰ περὶ τῶν αὐτῶν ἔλεγον, ἀλλ' ὡς ἑκατέρων τις εὐνοίας ἢ μνήμης ἔχοι. καὶ ἐς μὲν ἀκρόασιν ἴσως τὸ μὴ μυθῶδες αὐτῶν ἀτερπέστερον φανεῖται· ὅσοι δὲ βουλήσονται τῶν τε γενομένων τὸ σαφὲς σκοπεῖν καὶ τῶν μελλόντων ποτὲ αὖθις κατὰ τὸ ἀνθρώπειον τοιούτων καὶ παραπλησίων ἔσεσθαι, ὠφέλιμα κρίνειν αὐτὰ ἀρκούντως ἕξει. κτῆμά τε ἐς ἀεὶ μᾶλλον ἢ ἀγώνισμα ἐς τὸ παραχρῆμα ἀκούειν ξύγκειται.*

(a) Cite a parallel to the use of *ἀπίστως* in the above extract from the first book of Thucydides.

(b) The last sentence has been much misunderstood: what is its true explanation?

2. ἔτι δὲ τοῖς μὲν σώμασιν ἀλλοτριωτάτοις ὑπὲρ τῆς πόλεως χρῶνται, τῇ γνώμῃ δὲ οἰκειοτάτῃ ἐς τὸ πράσσειν τι ὑπὲρ αὐτῆς.

Illustrate the turn of thought in this sentence by any parallels which you may have met in the course of your reading.

3. Write brief notes upon any peculiarities of construction which you observe in the following sentences:—

(a) ἐν τοῖς πρῶτοι δὲ Ἀθηναῖοι τὸν σίδηρον κατέθεντο.

(b) ἑτοῖμοι δὲ εἶναι καὶ ὥστε ἀμφοτέρους μένειν κατὰ χώραν.

(c) ἵνα μὴ δυοῖν φθάσαι ἁμάρτωσιν.

(d) καὶ ξυγγνώμη εἰ μὴ μετὰ κακίας δοξῆς δὲ μᾶλλον ἁμαρτίᾳ τῇ πρότερον ἀπραγμοσύνῃ ἐνάντια τολμῶμεν.

(e) καὶ ἡ πόλις αὐτῶν ἅμα, αὐταρκῆ θέσιν κειμένη, παρέχει αὐτοὺς δικαστὰς ὧν βλάπτουσί τινας μᾶλλον ἢ κατὰ ξυνθήκας γίγνεσθαι.

(f) τῶν δὲ Ἀθηναίων ἔτυχε γὰρ πρεσβεία πρότερον ἐν τῇ Λακεδαίμονι περὶ ἄλλων παροῦσα καὶ ὡς ᾔσθοντο τῶν λόγων ἔδοξεν αὐτοῖς παριτητέα ἐς τοὺς Λακεδαιμονίους εἶναι τῶν μὲν ἐγκλημάτων πέρι μηδὲν ἀπολογησομένους ὧν ἀι πόλεις ἐνεκάλουν κ. τ. λ.

(g) οἵπερ δὲ καὶ τῶν ἀποβαινόντων τὸ πλέον ἐπ ἀμφότερα τῆς αἰτίας ἔξομεν, οὗτοι καὶ καθ' ἡσυχίαν τι αὐτῶν προϊδωμεν.

B. 1. The Athenian envoy at Sparta, immediately before the Peloponnesian war, states fairly enough (Thucyd. I., 66,) the motives which impelled the Athenians gradually to transform their headship of a maritime confederacy into an empire?

2. The particular modes in which the Athenian empire was felt as a grievance by the allies appear to have been chiefly three?

3. In what manner does the judicial authority of Athens over her allies appear first to have begun?

4. *Καὶ ἐλασσούμενοι γὰρ ἐν ταῖς ξυμβολαίαις πρὸς τοὺς ξυμμάχους δίκαις, καὶ παρ' ἡμῖν αὐτοῖς ἐν τοῖς ὁμοίοις νόμοις ποιήσαντες τὰς κρίσεις, φιλοδικεῖν δοκοῦμεν, κ. τ. λ.* Thucyd. I. 77. On what grounds does Mr. Grote refuse to regard the *ξυμβολαῖαι δίκαι* as the same with the *δίκαι ἀπὸ ξυμβόλων*? Explain the latter term.

5. Compare Sparta's government of her allies with that of the Athenians.

6. What maxim of international law regarding the treatment of allies appears to have been admitted by both the great confederacies into which Greece was divided?

7. Describe the relations between a metropolis and its colony.

8. What are the only events recorded by Thucydides, in his preliminary sketch, between the establishment of the Athenian *ἡγεμονία* and the siege of Naxos?

9. Relate the events which led to the thirty years' truce; give the date of that event, and state the conditions upon which it was concluded.

10. To what does Thucydides mainly attribute the hostility of the Corinthians against Athens?

11. What does he assign as the real motive which impelled Sparta to war?

12. Give his account of the closing negotiations between Athens and Sparta.

13. Pericles is described by Thucydides as *λέγειν τε καὶ πράσσειν δυνατώτατος*; is this description applicable to the statesmen of the succeeding age?

III. Translate PLATO'S CRITO, XII.

1. *Τί οὖν, ἂν εἴπωσιν οἱ νόμοι, Ὦ Σώκρατες, ἦ καὶ ταῦτα ὡμολόγητο ἡμῖν τε καὶ σοί, ἢ ἐμμένειν ταῖς δίκαις αἷς ἂν ἡ πόλις δικάζῃ; εἰ οὖν αὐτῶν θαυμάζοιμεν λεγόντων, ἴσως ἂν εἴποιεν, ὅτι Ὦ Σώκρατες, μὴ θαύμαζε τὰ λεγόμενα, ἀλλ' ἀποκρίνου, ἐπειδὴ καὶ εἴωθας χρῆσθαι τῷ ἐρωτᾶν τε καὶ ἀποκρίνεσθαι. φέρε γὰρ, τί ἐγκαλῶν ἡμῖν τε καὶ τῇ πόλει ἐπιχειρεῖς ἡμᾶς ἀπολλύναι; οὐ πρῶτον μέν σε ἐγεννήσαμεν ἡμεῖς, καὶ δι' ἡμῶν ἐλάμβανε τὴν μητέρα σου ὁ πατὴρ καὶ ἐφύτευσέ σε; φράσον οὖν, τούτοις ἡμῶν, τοῖς νόμοις τοῖς περὶ τοὺς γάμους, μέμφει τι ὡς οὐ καλῶς ἔχουσιν; Οὐ μέμφομαι, φαίην ἄν. Ἀλλὰ τοῖς περὶ τὴν τοῦ γενομένου τροφήν τε καὶ παιδείαν, ἐν ᾗ καὶ σὺ ἐπαιδεύθης; ἦ οὐ καλῶς προσέταττον ἡμῶν οἱ ἐπὶ τούτοις τεταγμένοι νόμοι, παραγγέλλοντες τῷ πατρὶ τῷ σῷ σε ἐν μουσικῇ καὶ γυμναστικῇ παιδεύειν; Καλῶς, φαίην ἄν. Εἶεν. ἐπειδὴ δὲ ἐγένου τε καὶ ἐξετράφης καὶ ἐπαιδεύθης, ἔχοις ἂν εἰπεῖν πρῶτον μὲν, ὡς οὐχὶ ἡμέτερος ἦσθα καὶ ἔκγονος καὶ δοῦλος, αὐτός τε καὶ οἱ σοὶ πρόγονοι; καὶ εἰ τοῦθ' οὕτως ἔχει, ἆρ' ἐξ ἴσου οἴει εἶναι σοὶ τὸ δίκαιον καὶ ἡμῖν, καὶ ἅτ' ἂν ἡμεῖς σε ἐπιχειρῶμεν ποιεῖν, καὶ σὺ ταῦτα ἀντιποιεῖν οἴει δίκαιον εἶναι; ἢ πρὸς μὲν ἄρα σοι τὸν πατέρα οὐκ ἐξ ἴσου ἦν τὸ δίκαιον καὶ πρὸς τὸν δεσπότην, εἴ σοι ὢν ἐτύγχανεν, ὥστε ἅπερ πάσχοις ταῦτα καὶ ἀντιποιεῖν, οὔτε κακῶς ἀκούοντα ἀντιλέγειν οὔτε τυπτόμενον ἀντιτύπτειν οὔτε ἄλλα τοιαῦτα πολλά· πρὸς δὲ τὴν πατρίδα ἄρα καὶ τοὺς νόμους ἐξέσται σοι, ὥστε, ἐάν σε ἐπιχειρῶμεν ἡμεῖς ἀπολλύναι δίκαιον ἡγούμενοι εἶναι, καὶ σὺ δὲ ἡμᾶς τοὺς νόμους καὶ τὴν πατρίδα καθ' ὅσον δύνασαι ἐπιχειρήσεις ἀνταπολλύναι, καὶ φήσεις ταῦτα ποιῶν δίκαια πράττειν, ὁ τῇ ἀληθείᾳ τῆς ἀρετῆς ἐπιμελόμενος; ἢ οὕτως εἶ σοφὸς, ὥστε λέληθέ σε, ὅτι μητρός τε καὶ πατρὸς καὶ τῶν ἄλλων προγόνων ἁπάντων τιμιώτερόν ἐστι πατρὶς καὶ σεμνότερον καὶ ἁγιώτερον καὶ ἐν μείζονι μοίρᾳ καὶ παρὰ θεοῖς καὶ παρ' ἀνθρώποις τοῖς νοῦν ἔχουσι, καὶ σέβεσθαι δεῖ καὶ μᾶλλον ὑπείκειν καὶ θωπεύειν πατρίδα χαλεπαίνουσαν ἢ πατέρα, καὶ ἢ πείθειν ἢ ποιεῖν ἃ ἂν κελεύῃ, καὶ πάσχειν, ἐάν τι προστάττῃ παθεῖν, ἡσυχίαν ἄγοντα, ἐάν τε τύπτεσθαι ἐάν τε δεῖσθαι, ἐάν τε εἰς πόλεμον ἄγῃ τρωθησόμενον ἢ ἀποθανούμενον, ποιητέον ταῦτα, καὶ τὸ δίκαιον οὕτως ἔχει, καὶ οὐχὶ ὑπεικτέον οὐδὲ ἀναχωρητέον οὐδὲ λειπτέον τὴν τάξιν, ἀλλὰ καὶ ἐν πολέμῳ καὶ ἐν δικαστηρίῳ καὶ πανταχοῦ ποιητέον ἃ ἂν κελεύῃ ἡ πόλις καὶ ἡ πατρὶς, ἢ πείθειν αὐτὴν ᾗ τὸ δίκαιον πέφυκε· βιάζεσθαι δ' οὐχ ὅσιον οὔτε μητέρα οὔτε πατέρα, πολὺ δὲ τούτων ἔτι ἧττον τὴν πατρίδα. Τί φήσομεν πρὸς ταῦτα, ὦ Κρίτων; ἀληθῆ λέγειν τοὺς νόμους, ἢ οὔ;* ΚΡ. *Ἔμοιγε δοκεῖ.*

(*a*) *ἐν μουσικῇ καὶ γυμναστικῇ*—What did the ancients include under these terms?

(*b*) Explain the construction, *καὶ σὺ ταῦτα ἀντιποιεῖν οἴει κ. τ. λ.*

(*c*) What is the force of the particle *ἄρα* in the sentence *ἢ πρὸς μὲν ἄρα σοι τὸν πατέρα κ. τ. λ.*?

(*d*) Illustrate by parallels the phrase *ἐν μείζονι μοίρᾳ εἶναι.*

(*e*) Explain the *anacolouthon* in *οὔτε κακῶς ἀκούοντα ἀντιλέγειν*, and that in *ἢ πείθειν αὐτὴν ᾗ τὸ δίκαιον πέφυκεν.*

2. Explain the following forms of expression:—

(*a*) *ἄλλο τι περὶ πολλοῦ ποιεῖ, ὅπως κ. τ. λ.*

(*b*) *ἵνα τί ταῦτα λέγεις;*

(*c*) *ὥσπερ ἂν εἴ τις εἴποι.*

(*d*) *μάλιστα δὲ αὐτῶν ἓν ἐθαύμασα τῶν πολλῶν κ. τ. λ.*

(*e*) *τί ἄξιός εἰμι παθεῖν ἢ ἀποτῖσαι, ὅ τι μαθὼν ἐν τῷ βίῳ οὐκ ἡσυχίαν ἦγον.*

IV. Translate into Greek prose:—

The ancient Greek historians gave the name of Scythians and Celto-Scythians to all the northerns, while those who preceded them made a division, terming such as lay above the Euxine, the Ister, and the Adriatic, Hyberboreans and Sarmatians, and Arimaspians; while such as lay beyond the Caspians they called, one portion of them Sacians, and another

Massagetes, having in fact not a single particle of information to give about them, although they do not scruple to relate a war between Cyrus and the Massagetes. In fact, neither on the subject of these tribes had any one ascertained any thing to be depended upon, nor was any great credit to be attached to the ancient part of the Persian, Median, and Assyrian history, owing to the simplicity of the historians and their fondness for legends. For seeing, as they did, professed legend writers in great esteem, they thought that they would give a relish to their productions by relating, in the form of history, matters which they neither saw nor heard of (at least from persons, who they were satisfied were acquainted with what they related), simply and solely because such matters would excite the satisfaction and wonder of the hearers. One has as much reason to put faith in Hesiod and Homer, in their stories of the heroes, as upon Ctesias, Herodotus, and Hellanicus, and others of their stamp.

I.—Translate ILIAD, XXII., 475–510.

ἡ δ' ἐπεὶ οὖν ἄμπνυτο καὶ ἐς φρένα θυμὸς ἀγέρθη,
ἀμβλήδην γοόωσα μετὰ Τρωῇσιν ἔειπεν·
"Ἕκτορ, ἐγὼ δύστηνος. ἰῇ ἄρα γίγνομεθ' αἴσῃ
ἀμφότεροι, σὺ μὲν ἐν Τροίῃ Πριάμου κατὰ δῶμα,
αὐτὰρ ἐγὼ Θήβῃσιν ὑπὸ Πλάκῳ ὑληέσσῃ
ἐν δόμῳ Ἠετίωνος, ὅ μ' ἔτρεφε τυτθὸν ἐοῦσαν,
δύσμορος αἰνόμορον· ὡς μὴ ὤφελλε τεκέσθαι.
νῦν δὲ σὺ μὲν Ἀΐδαο δόμους ὑπὸ κεύθεσι γαίης
ἔρχεαι, αὐτὰρ ἐμὲ στυγερῷ ἐνὶ πένθει λείπεις
χήρην ἐν μεγάροισι. παῖς δ' ἔτι νήπιος αὖτως,
ὃν τέκομεν σύ τ' ἐγώ τε δυσάμμοροι· οὔτε σὺ τούτῳ
ἔσσεαι, Ἕκτορ, ὄνειαρ, ἐπεὶ θάνες, οὔτε σοι οὗτος.
ἦν περ γὰρ πόλεμόν γε φύγῃ πολύδακρυν Ἀχαιῶν
αἰεί τοι τούτῳ γε πόνος καὶ κήδε' ὀπίσσω
ἔσσονται· ἄλλοι γάρ οἱ ἀπουρίσσουσιν ἀρούρας.
ἦμαρ δ' ὀρφανικὸν παναφήλικα παῖδα τίθησιν·
πάντα δ' ὑπεμνήμυκε, δεδάκρυνται δὲ παρειαί.
δευόμενος δέ τ' ἄνεισι πάϊς ἐς πατρὸς ἑταίρους,
ἄλλον μὲν χλαίνης ἐρύων, ἄλλον δὲ χιτῶνος·
τῶν δ' ἐλεησάντων κοτύλην τις τυτθὸν ἐπέσχεν,
χείλεα μέν τ' ἐδίην', ὑπερῴην δ' οὐκ ἐδίηνεν.
τὸν δὲ καὶ ἀμφιθαλὴς ἐκ δαιτύος ἐστύφελιξεν,
χερσὶν πεπληγὼς καὶ ονειδείοισιν ἐνίσσων·
"ἔρρ' οὕτως· οὐ σός γε πατὴρ μεταδαίνυται ἡμῖν."
δακρυόεις δέ τ' ἄνεισι πάϊς ἐς μητέρα χήρην,
Ἀστυάναξ ὃς πρὶν μὲν ἐοῦ ἐπὶ γούνασι πατρὸς
μυελὸν οἷον ἔδεσκε καὶ οἰῶν πίονα δημόν·
αὐτὰρ ὅθ' ὕπνος ἔλοι, παύσαιτό τε νηπιαχεύων,
εὕδεσκ' ἐν λέκτροισιν, ἐν ἀγκαλίδεσσι τιθήνης
εὐνῇ ἔνι μαλακῇ, θαλέων ἐμπλησάμενος κῆρ.
νῦν δ' ἂν πολλὰ πάθῃσι, φίλου ἀπὸ πατρὸς ἀμαρτών
Ἀστυάναξ, ὃν Τρῶες ἐπίκλησιν καλέουσιν·
οἷος γὰρ σφιν ἔρυσο πύλας καὶ τείχεα μακρά.
νῦν δέ σε μὲν παρὰ νηυσὶ κορώνισι, νόσφι τοκήων
αἰόλαι εὐλαὶ ἔδονται, ἐπεί κε κύνες κορέσωνται."

(*a*) Cite an expression from the Iliad which explains the metaphor involved in *ἀμβλήδην γοόωσα*.

(*b*) We find in the latter books of the Iliad several words framed upon the analogy of *παναφήλικα*?

(*c*) Trace the steps by which *αὖτως* has acquired the signification which it bears in the phrase *νήπιος αὖτως*, giving examples of each modification of meaning.

(*d*) Discuss the following words:—
ἄμπνυτο, ἀπουρίσσουσιν, ὑπεμνήμυκε, ἐνίσσων, ἔρυσο, αἰόλαι.

II.—Translate ODYSSEY, XIV., 147–199.

τὸν δ' αὖτε προσέειπε πολύτλας δῖος Ὀδυσσεύς·
"ὦ φίλ', ἐπεὶ δὴ πάμπαν ἀναίνεαι, οὐδ' ἔτι φῇσθα
κεῖνον ἐλεύσεσθαι, θυμὸς δέ τοι αἰὲν ἄπιστος·
ἀλλ' ἐγὼ οὐκ αὖτως μυθήσομαι, ἀλλὰ σὺν ὅρκῳ
ὡς νεῖται Ὀδυσεύς. εὐαγγέλιον δέ μοι ἔστω
αὐτίκ', ἐπεί κεν κεῖνος ἰὼν τὰ ἃ δώματ' ἵκηται·
. . . . . .
ἴστω νῦν Ζεὺς πρῶτα θεῶν, ξενίη τε τράπεζα
ἱστίη τ' Ὀδυσῆος ἀμύμονος, ἣν ἀφικάνω,
ἦ μέν τοι τάδε πάντα τελείεται ὡς ἀγορεύω.
τοῦδ' αὐτοῦ λυκάβαντος ἐλεύσεται ἐνθάδ' Ὀδυσσεύς."
. . . . . .

τὸν δ' ἀπαμειβόμενος προσέφης, Εὔμαιε συβῶτα·
"ὦ γέρον, οὔτ' ἄρ' ἐγὼν εὐαγγέλιον τόδε τίσω,
οὔτ' Ὀδυσεὺς ἔτι οἶκον ἐλεύσεται· ἀλλὰ ἔκηλος
πῖνε καὶ ἄλλα παρὲξ μεμνώμεθα, μηδέ με τούτων
μίμνησκ'· ἦ γὰρ θυμὸς ἐνὶ στήθεσσιν ἐμοῖσιν
ἄχνυται, ὁππότε τις μνήσῃ κεδνοῖο ἄνακτος.
. . . . . .
ἀλλ' ἄγε μοι σὺ, γεραιὲ, τὰ σ' αὐτοῦ κήδε' ἔνισπε."
. . . . . .
τὸν δ' ἀπαμειβόμενος προσέφη πολύμητις Ὀδυσσεύς·
"τοιγὰρ ἐγώ τοι ταῦτα μάλ' ἀτρεκέως ἀγορεύσω.
εἴη μὲν νῦν νῶιν ἐπὶ χρόνον ἡμὲν ἐδωδὴ
ἠδὲ μέθυ γλυκερὸν κλισίης ἔντοσθεν ἐοῦσιν
δαίνυσθαι ἀκέοντ', ἄλλοι δ' ἐπὶ ἔργον ἔποιεν·
ῥηιδίως κεν ἔπειτα καὶ εἰς ἐνιαυτὸν ἅπαντα
οὔ τι διαπρήξαιμι λέγων ἐμὰ κήδεα θυμοῦ,
ὅσα γε δὴ ξύμπαντα θεῶν ἰότητι μόγησα."

(*a*) Give Buttmann's account of the form *ἐνίσπε*.
(*b*) What is there remarkable in the Homeric use of the word *ἀκέων*?
(*c*) What is the meaning of *ἰότητι* in the Prometheus Vinctus of Æschylus?

III.—Translate ÆSCHYLUS, PROMETHEUS VINCTUS, 397–424, 707–728.

νοτίοις ἔτεγξε παγαῖς· ἀμέγαρτα γὰρ τάδε Ζεὺς
ἰδίοις νόμοις κρατύνων ὑπερήφανον θεοῖσι
τοῖσι πάρος δείκνυσιν αἰχμάν.
προπᾶσα δ' ἤδη στονόεν λέλακε χώρα, Αντ. α'.
μεγαλοσχήμονά τ' ἀρχαιοπρεπῆ στένουσι τὰν σὰν
ξυνομαιμόνων τε τιμὰν, ὁπόσοι τ' ἔποικον ἀγνᾶς
Ἀσίας ἕδος νέμονται, μεγαλοστόνοισι σοῖσι
πήμασι συγκάμνουσι θνητοί·
Κολχίδος τε γᾶς ἔνοικοι Στρ. β'.
παρθένοι, μάχας ἄτρεστοι,
καὶ Σκύθης ὅμιλος, οἳ γᾶς
ἔσχατον τόπον ἀμφὶ Μαιῶτιν ἔχουσι λίμναν,
Ἀραβίας τ' ἄρειον ἄνθος, Αντ. β'.
ὑψίκρημνόν θ' οἳ πόλισμα
Καυκάσου πέλας νέμονται
δᾴιος στρατὸς, ὀξυπρῳρίοισι βρέμων ἐν αἰχμαῖς.
2. *πρῶτον μὲν ἐνθένδ' ἡλίου πρὸς ἀντολὰς*
στρέψασα σαυτὴν στεῖχ' ἀνηρότους γύας·
Σκύθας τ' ἀφίξει νομάδας οἳ πλεκτὰς στέγας
πεδάρσιοι ναίουσ' ἐπ' εὐκύκλοις ὄχοις
ἐκηβόλοις τόξοισιν ἐξηρτημένοι·
οἷς μὴ πελάζειν, ἀλλ' ἀλιστόνοις πόδας
χρίμπτουσα ῥαχίαισιν ἐκπερᾶν χθόνα.
λαιᾶς δὲ χειρὸς οἱ σιδηροτέκτονες
οἰκοῦσι Χάλυβες, οὓς φυλάξασθαί σε χρή.
ἀνήμεροι γὰρ οὐδὲ πρόσπλαστοι ξένοις.
ἥξεις δ' Ὑβριστὴν ποταμὸν οὐ ψευδώνυμον,
ὃν μὴ περάσῃς, οὐ γὰρ εὔβατος περᾶν,
πρὶν ἂν πρὸς αὐτὸν Καύκασον μόλῃς, ὀρῶν
ὕψιστον, ἐνθὰ ποταμὸς ἐκφυσᾷ μένος
κροτάφων ἀπ' αὐτῶν. ἀστρογείτονας δὲ χρὴ
κορυφὰς ὑπερβάλλουσαν ἐς μεσημβρινὴν
βῆναι κέλευθον, ἐνθ' Ἀμαζόνων στρατὸν
ἵξει στυγάνορ', αἳ Θεμίσκυράν ποτε
κατοικιοῦσιν ἀμφὶ Θερμώδονθ', ἵνα
τραχεῖα πόντου Σαλμυδησία γνάθος
ἐχθρόξενος ναύταισι, μητρυιὰ νεῶν·
αὗταί σ' ὀδηγήσουσι καὶ μάλ' ἀσμένως.

1. (*a*) What various reading has been proposed for *ἀμέγαρτα γὰρ τάδε Ζεὺς ‖ ἰδίοις κ.τ.λ.* in order to avoid the unusual meaning which must otherwise be given to *ἀμέγαρτα*?
(*b*) A passage of Horace has been cited to illustrate the combination *Σκύθης ὅμιλος—Ἀραβίας τ' ἄρειον ἄνθος*.
(*c*) What is Burges's very ingenious emendation for *Ἀραβίας*.
2. (*a*) Correct the common reading *ἐξηρτημένοι* v. 711.
(*b*) What various reading do we find for *πρόσπλαστοι*. Which reading do you prefer, and upon what grounds?
(*c*) Cite parallels to the construction *λαιᾶς χειρός*.
(*d*) There is a striking parallel to the expression *ὑβριστὴν ποταμόν* in the first book of Herodotus—cite the passage.
(*e*) The poet has made a strange mistake in placing Themiscyra near the Thermodon—point out its true site.

3. Explain briefly the following words, tracing their etymology :—

λεωργός, ἀτέραμνος, πεδάρσιος, παράορος, σφριγάω, προὐσελούμενος, ἁρμοῖ, ἐπάργεμος, ἀήσυροι, ἄφετος, θολερός, χερνήτης.

IV.—Translate Sophocles, Œdipus Colonœus, 1556–1578.

εἰ θέμις ἐστί μοι τὰν ἀφανῆ θεὸν — Στρ.
καί σε λιταῖς σεβίζειν,
ἐννυχίων ἄναξ,
Αἰδωνεῦ, Αἰδωνεῦ, λίσσομαι,
ἥτ' ἐπιπόνῳ μήτ' ἐπὶ βαρυαχεῖ
ξένον ἐκτανύσαι
μόρῳ τὰν παγκευθῆ κάτω
νεκρῶν πλάκα καὶ Στύγιον δόμον.
πολλῶν γὰρ ἂν καὶ μάταν
πημάτων ἱκνουμένων
πάλιν σὲ δαίμων δίκαιος αὔξοι.
ὦ χθόνιαι θεαί, σῶμά τ' ἀνικάτου — Αντ.
θηρὸς, ὃν ἐν πύλαισι
φασὶ πολυξέστοις
εὐνᾶσθαι κνυζᾶσθαί τ' ἐξ ἄντρων
ἀδάματον φύλακα παρ' Ἀΐδᾳ
λόγος αἰὲν ἔχει·
ὄν, ὦ Γᾶς παῖ καὶ Ταρτάρου,
κατεύχομαι ἐν καθαρῷ βῆναι
ὀρμωμένῳ νερτέρας
τῷ ξένῳ νεκρῶν πλάκας.
σέ τοι κικλήσκω τὸν αἱένυπνον.

(*a*) Mention the emendations which have been proposed for the readings *λίσσομαι* v. 1560, *ἐκτανύσαι* v. 1562, *σέ* v. 1567, *πολυξέστοις* v. 1570, and state the grounds upon which they have been made.

(*b*) Who are the *χθόνιαι θεαί*, and why are they here invoked?

(*c*) Cite from the Œdipus Colonœus a parallel to the form of invocation, without a verb following, employed in the Antistrophe.

(*d*) Illustrate from the Iliad the expression *ἐν καθαρῷ βῆναι*.

V.—Translate Euripides, Orestes, 795–806.

ΟΡΕΣΤΗΣ.

ἕρπε νυν, οἵαξ ποδός μοι.

ΠΥΛΑΔΗΣ.

φίλα γ' ἔχων κηδεύματα
Ο. καί με πρὸς τύμβον πόρευσον πατρός. Π. ὡς τί δὴ τόδε;
Ο. ὥς νιν ἱκετεύσω με σῶσαι. Π. τό γε δίκαιον ὧδ' ἔχει.
Ο. μητέρος δὲ μηδ' ἴδοιμι μνῆμα. Π. πολεμία γὰρ ἦν.
ἀλλ' ἔπειγ', ὡς μή σε πρόσθε ψῆφος Ἀργείων ἕλῃ,
περιβαλὼν πλευροῖς ἐμοῖσι πλευρὰ νωχελῆ νόσῳ,
ὡς ἐγὼ δι' ἄστεώς σε σμικρὰ φροντίζων ὄχλου
ὀνδὲν αἰσχυνθεὶς ὀχήσω. ποῦ γὰρ ὢν δείξω φίλος,
εἴ σε μὴ 'ν δειναῖσιν ὄντα συμφοραῖς ἐπαρκέσω; ‖
Ο. τοῦτ' ἐκεῖνο, κτᾶσθ' ἑταίρους, μὴ τὸ συγγενὲς μόνον·
ὡς ἀνὴρ, ὅστις τρόποισι συντακῇ, θυραῖος ὤν,
μυρίων κρείσσων ὁμαίμων ἀνδρὶ κεκτῆσθαι φίλος.

VI.—1. Give the laws of the trochaic tetrameter, stating the metrical principles on which they are based.

2. The licences allowed in iambic verse are easily deduced from the rules of the trochaic metre?

3. Point out and comment upon any metrical peculiarities which you observe in the following verses :—

ἔπτηξα θυμόν. οὐρανία γὰρ ἀστραπή—Soph. Œd. Col. 1466
εἰ δ' ἐγκρατεῖς φεύγουσιν, οὐδὲν δεῖ πονεῖν —— 1022
σφῶν αὖ πέφασμαι καινὸς, ὥσπερ σφὼ πατρί —— 1543
ἦν δ' ἐγγὺς ἐλθῇ θάνατος, οὐδεὶς βούλεται——Eur. Alc. 671
εἰσῆλθε τοῖν τρισαθλίοιν ἔρις κακή —— Soph. Œd. Col. 372
σοὶ φασὶν αὐτὸν ἐς λόγους ἐλθεῖν μολόντ' ‖ *αἰτεῖν*—— 1164

4. What are the leading varieties of the dochmius?

5. Scan the following verses, making such remarks as you deem appropriate.

ὑπνοδύταν νόμον· ἰὼ ἰὼ πόποι ——— P. V. 575
οἰστρηλάτῳ δὲ δείματι δειλαίαν ——— 580
κλύεις φθέγμα τᾶς βούκερω παρθένου——— 588
τὰν ἀφανῆ θεὸν καί σε λιταῖς σεβίζω—Œd. Col. 1557
νέα τάδε νεόθεν ἦλθέ μοι ——— 1447

6. Scan—

δακρυσίστακτον δ' ἀπ' ὄσσων ῥαδινῶν ῥέος παρειάν—Stroph.
μεγαλοσχήμονά τ' ἀρχαιοπρεπῆ στένουσι τὰν σάν —— Ant.

Do these verses correspond in their scansion?

VII.—1. *Ἀρίονα τὸν Μηθυμναῖον—ἐόντα κιθαρῳδὸν τῶν τότε ἐόντων οὐδενὸς δευτερὸν, καὶ διθύραμβον πρῶτον ἀνθρώπων τῶν ἡμεῖς ἴδμεν ποιήσαντά τε καὶ ὀνομάσαντα καὶ διδάξαντα ἐν Κορίνθῳ, τοῦτον Ἀρίονα λέγουσι, κ. τ. λ.* Herod. I., 23.

Write a brief comment on this passage.

2. Explain the manner in which tragedy may have arisen from the dithyrambic choruses.

3. State the arguments for and against lyrical tragedy as a distinct species.

4. Account for the fact that the choral element of the Attic tragedy was written in the Doric dialect.

5. What circumstances lend probability to the conjecture that the dialogue or Ionian element of Attic tragedy was connected with the rhapsodical recitations?

6. How is the metre in which it is written to be accounted for?

7. When did the union of the iambic dialogue with the lyrical chorus take place?

8. Cite the passage of Aristotle in which he describes the improvements made in tragedy by Æschylus, and compare it with Horace's allusion to the improvements of Æschylus in the "Art of Poetry."

9. What was the crowning improvement in Greek tragedy?

10. Enumerate the innovations of Euripides. To what class of composition does his Alcestis belong?

11. Give Aristotle's definition of tragedy.

12. How does Horace (Ar. Poet.) describe the functions of the chorus?

13. The place of the chorus in Greek tragedy has been well elucidated by Schlegel?

VIII.—Translate into Greek verse the following stanzas from Wordsworth's "Laodamia:"

Ah wherefore?—did not Hercules by force
Wrest from the guardian monster of the tomb
Alcestis, a reanimated corse,
Given back to dwell on earth in vernal bloom?
Medea's spells dispersed the weight of years,
And Æson stood a youth 'mid youthful peers.

The Gods to us are merciful—and they
Yet further may relent, for mightier far
Than strength of nerve or sinew, or the sway
Of magic potent over sun and star,
Is love, though oft to agony distrest,
And though his favourite seat be feeble woman's breast.

EXAMINATION FOR HONORS, B.A.

27th September, 1855, 9 *o'clock, a.m.*

LATIN.—*Examiner, Charles Parsons Reichel, B.D.*

HORACE.—ODES.

Lydia dic per omnes te deos oro Sybarin cur properas amando perdere cur apricum oderit campum patiens pulveris atque solis cur neque militaris inter æquales equitat Gallica nec lupatis temperat ora frænis cur timet flavum Tiberim tangere cur olivum sanguine viperino cautius vitat neque jam livida gestat armis brachia sæpe disco sæpe trans finem jaculo nobilis expedito quid latet ut marinæ filium dicunt Thetidis sub lacrimosa Trojæ funera ne virilis cultus in cædem et Lycias proriperet catervas.

1. Translate the foregoing ode.

2. Mark on the paper the divisions of its lines, and specify the metres employed in it.

3. Give the dates assigned by Bentley for the bringing out of the several parts of Horace's works, and state how far the best recent commentators have confirmed his conclusions.

4. Draw up a scale of the Alcaic and Sapphic metres, as used by Horace; and specify the restrictions he has introduced into them.

VIRGIL.—ÆNEID, BOOK VI.

Principio cælum ac terras camposque liquentes
Lucentemque globum lunæ Titaniaque astra
Spiritus intus alit, totamque infusa per artus
Mens agitat molem et magno se corpore miscet.
Inde hominum pecudumque genus, vitæque volantum,
Et quæ marmoreo fert monstra sub æquore pontus.
Igneus est ollis vigor et cælestis origo
Seminibus, quantum non noxia corpora tardant,
Terrenique hebetant artus moribundaque membra.
Hinc metuunt cupiuntque, dolent gaudentque; neque auras
Dispiciunt, clausi tenebris et carcere cæco.
Quin et supremo quum lumine vita reliquit,
Non tamen omne malum miseris nec funditus omnes
Corporeæ excedunt pestes: penitusque necesse est
Multa din concreta modis inolescere miris.
Ergo exercentur pœnis, veterumque malorum
Supplicia expendunt. Aliæ panduntur inanes

Suspensæ ad ventos: aliis sub gurgite vasto
Infectum eluitur seclus aut exuritur igni.
Quisque suos patimur manes: exinde per amplum
Mittimur elysium, et pauci læta arva tenemus:
Donec longa dies, perfecto temporis orbe,
Concretam exemit labem, purumque relinquit
Ætherium sensum atque aurai simplicis ignem.
Has omnes ubi mille rotam volvere per annos
Lethæum ad fluvium deus evocat agmine magno:
Scilicet immemores supera ut convexa revisant
Rursus, et incipiant in corpora velle reverti.

1. Translate this passage, and add such comments as you think necessary to explain its phraseology and the philosophic system set forth in it.

TERENCE.—PHORMIO.

Antipho. Non sum apud me. *Geta.* Atqui opus est nunc quum maxime ut sis, Antipho:
Nam si senserit te timidum pater esse, arbitrabitur
Commeruisse culpam. *Phædria.* Hoc verum 'st. *A.* Non possum immutarier.
G. Quid faceres, si aliud quid gravius tibi nunc faciundum foret?
A. Quum hoc non possum, illud minus possem. *G.* Hoc nihil est, Phædria; ilicet
Quid hic conterimus operam frustra? quin abeo? *Ph.* Et quidem ego. *A.* Obsecro,
Quid si adsimulo, satin' est? *G.* Garris. *A.* Vultum contemplamini; hem,
Satin' est sic? *G.* Non. *A.* Quid si sic? *G.* Propemodum. *A.* Quid si sic?
G. Sat est:
Hem, istuc serva: et verbum verbo, par pari ut respondeas,
Ne te iratus suis sævidicis dictis protelet. *A.* Scio.
G. Vi coactum te esse, invitum, lege, judicio: tenes?
Sed quis hic est senex, quem video in ultima platea? *A.* Ipsus est.
Non possum adesse. *G.* Ah, quid agis? quo abis, Antipho?
Mane, inquam. *A.* Egomet me novi et peccatum meum:
Vobis commendo Phanium et vitam meam.
Ph. Geta, quid nunc fiet? *G.* Tu jam lites audies:
Ego plectar pendens, nisi quid me fefellerit.
Sed, quod modo hic nos Antiphonem monuimus,
Id nosmet ipsos facere oportet, Phædria.
Ph. Aufer mi oportet: quin tu, quid faciam, impera.
G. Meministin', olim ut fuerit vestra oratio
In re incipiunda ad defendendam noxiam,
Justam illam causam, facilem, vincibilem, optumam?
Ph. Memini. *G.* Hem, nunc ipsa 'st opus ea: aut, si quid potest,
Meliore et callidiore. *Ph.* Fiet sedulo.
G. Nunc prior adito tu. Ego in subsidiis hic ero
Succenturiatus si quid deficias. *Ph.* Age.

1. Translate the above extract.
2. Specify the different metres used in it, and accent the lines accordingly.
3. Enumerate the chief metres used by Terence, and specify the chief licences which occur in his versification.
4. State the plot of the Phormio. On what law does it turn?
5. Cite and emend the line of the prologue which gives the name of the Greek original of the play.

TACITUS.—HISTORIES, BOOK I.

Fuere qui proficiscenti Othoni moras religionemque nondum conditorum ancilium afferrent. Aspernatus est omnem cunctationem ut Neroni quoque exitiosam: et Cæcina jam Alpes transgressus exstimulabat. Pridie Idus Martias commendata patribus republica relliquias Neronianarum sectionum, nondum in fiscum conversas, revocatis ab exsilio concessit, justissimum donum et in speciem magnificum, sed festinata jam pridem exactione usu sterile. Mox vocata concione, majestatem urbis et consensum populi ac senatus pro se attollens, adversum Vitellianas partes modeste disseruit, inscitiam potius legionum quam audaciam increpans, nulla Vitellii mentione, sive ipsius ea moderatio, seu scriptor orationis sibi metuens contumeliis in Vitellium abstinuit, quando, ut in consiliis militiæ Suetonio Paullino et Mario Celso, ita in rebus urbanis Galerii Trachali ingenio Othonem uti credebatur. Et erant qui genus ipsum orandi noscerent, crebro fori usu celebre et ad implendas aures latum et sonans. Clamor vocesque vulgi, ex more adulandi, nimiæ et falsæ. Quasi dictatorem Cæsarem aut imperatorem Augustum prosequerentur, ita studiis votisque certabant: nec metu aut amore, sed ex libidine servitii, ut in familiis, privata cuique stimulatio et vile jam decus publicum.

1. Translate this passage.
2. Explain the words "religionem nondum conditorum ancilium," "reliquias Neronianarum sectionum."

CICERO IN VERREM.—ACCUSTIONIS LIB. I.

Rejecti a Chelidone, capiunt consilium necessarium, ut suscipiant ipsi negotium. Cum Rabonio tutore quod erat vix HS. quadraginta milium, transigunt HS. ducentis milibus. Refert ad istum rem Rabonius: ut sibi videatur, satis grandem pecuniam et satis impu-

dentem esse. Iste, qui aliquanto plus cogitasset, male accipit verbis Rabonium: negat eum sibi illa decisione satisfacere posse. Ne multa, locaturum se esse confirmat. Tutores hæc nesciunt; quod actum erat cum Rabonio, putant id esse certissimum: nullam majorem pupillo metuunt calamitatem. Iste vero non procrastinat: locare incipit, non proscripta neque edicta die, alienissimo tempore, ludis ipsis Romanis, foro ornato. Itaque renuntiat Rabonius illam decisionem tutoribus. Accurrunt tamen ad tempus tutores: digitum tollit Junius patruus. Isti color immutatus est: vultus, oratio, mens denique excidit. Quid ageret, cœpit cogitare. Si opus pupillo redimeretur, si res abiret ab eo mancipe, quem ipse apposuisset, sibi nullam prædam esse. Itaque excogitat, quid? Nihil ingeniose: nihil, quod quisquam possit dicere, improbe, verum callide: nihil ab isto tectum, nihil veteratorium exspectaveritis: omnia aperta, omnia perspicua esse reperientur, impudentia, amentia, audacia. Si pupillo opus redimitur, mihi præda de manibus eripitur. Quod est igitur remedium? quod? Ne liceat pupillo redimere. Ubi illa consuetudo in prædibus prædiisque vendendis, omnium consulum, censorum, prætorum, quæstorum denique, ut optima condicione sit is, cuja res sit, cujum periculum? Excludit eum solum, cui prope dicam soli potestatem factam esse oportebat. Quid enim quisquam ad meam pecuniam, me invito, adspirat? Quid accedit? Locatur opus id, quod ex mea pecunia reficiatur: ego me refecturum esse dico: probatio futura est tua qui locas: prædibus et prædiis populo cautum est: et, si non putas cautum, scilicet tu prætor in mea bona quos voles immittes? Me ad meas fortunas defendendas accedere non sines?

1. Translate this passage.
2. Explain the phrases and words sartum tectum, manubiæ, ad perpendiculum, comperendinatio, amplius pronuntiare, lege agere, sponsionem facere, pro praede litis vindiciarum satis accipere, accepta expensa referre, manus pretium, lapis redivivus, subsortitio.
3. Give the dates, ascertained or probable, and the provisions, as far as they are known, of the leges Acilia, Servilia (Glauciæ), and Cornelia de repetundis. When and by whom was the first law on this subject carried?
4. Give the exact date of the trial of Verres. What great change in the conduct of criminal trials took place in the same year?

27th September, 1855, 2 *o'clock, p.m.*

LATIN.—*Examiner, Charles Parsons Reichel, B.D.*

LIVY, BOOK IV.

I. Translate into English prose the following passage:—

Tribunicia primum comitia sunt habita, creati tribuni consulari potestate omnes patricii, L. Quinctius Cincinnatus tertium: L. Furius Medullinus iterum: A. Sempronius Atratinus. Hoc tribuno comitia quæstorum habente, petentibusque inter aliquot plebeios filio Antistii tribuni plebis et fratre alterius tribuni plebis Sex. Pompilii, nec potestas nec suffragatio horum valuit, quin quorum avos patresque consules viderant eos nobilitate præferrent. Furere omnes tribuni plebis, ante omnes Pompilius Antistiusque, repulsa suorum accensi, Quidnam id rei esset? Non suis beneficiis, non Patrum injuriis, non denique usurpandi libidine, quum liceat quod ante non licuerit, si non tribunum militarem, ne quæstorem quidem quenquam ex plebe factum. Non valuisse patris pre filio, fratris pro fratre preces, tribunorum plebis potestatis sacrosanctæ ad auxilium libertatis creatæ. Fraudem profecto in re esse, et A. Sempronium comitiis plus artis adhibuisse quam fidei. Ejus injuria queri suos honore dejectos. Itaque quum in ipsum, et innocentia tutum et magistratu in quo tunc erat, impetus fieri non posset, flexere iras in C. Sempronium patruelem Atratini: eique ob ignominiam Volsci belli, adjutore collega M. Canuleio diem dixere. Subinde ab iisdem tribunis mentio in senatu de agris dividendis illata est, cui actioni semper acerrime C. Sempronius restiterat: ratis, id quod erat, aut deposita causa leviorem futurum apud Patres reum, aut perseverantem sub judicii tempus plebem offensurum. . . . . Eodem anno Postumia virgo Vestalis de incestu causam dixit, crimine inoxia, ob suspicionem propter cultum amœniorem ingeniumque liberius quam virginem decet, parum abhorrens famam. Ampliatam, deinde absolutam, pro collegii sententia pontifex maximus abstinere jocis, colique sancte potius quam scite jussit

1. Comment on the last sentence but one of the passage.
2. Between what years do we find military tribunes with consular authority? and how does Niebuhr account for their number varying in different years?

II. Retranslate into Latin prose:—

If it has ever been doubted, fellow-citizens, whether it has been for your sake or for their own that the Tribunes of the commons have always been promoters of faction, I feel sure that this has ceased to be doubted in this present year. And as I rejoice that at length an end has been put to a mistake under which you have long laboured, so do I congratulate both you, and for your sakes the commonwealth, that this mistake has been removed of all times at the time of your prospering. Or is there any one who doubts that the Tribunes of the commons have never at any time been as much offended and enraged by any wrongs done by you, if such there have been at any time, as by the boon of the Fathers to the commons, in appointing pay for those engaged in military service? What else do you think they either at that time dreaded, or now wish to disturb, but that unanimity of the two orders of citizens, to break up which they think is the peculiar province of the Tribunician authority? Thus it is that like dishonest artizans they try to make work for themselves, always wishing that there should be something diseased in the

commonwealth, in order that there may be something in remedying which they may be employed by you. For whether are you, Tribunes, fighting *for* or *against* the commons? Whether are you the adversaries or the abettors of those engaged in military service? Unless haply you say, Whatever the Fathers do displeases us, whether it be for the commons or against them. And as masters forbid their slaves having any thing to do with other people, and think it right that others should abstain alike from kindnesses and injuries with regard to them, so do you interdict all intercourse between the Fathers and the commons, lest we by our courtesy and munificence should challenge the commons to a like return, and lest the commons should be loyal and obedient to us. How much rather ought you, had you one spark, I do not say of civic but of social spirit, to have favoured, and to the best of your ability promoted, courtesy on the part of the Fathers and loyalty on that of the commons? a unanimity of feeling which, should it be perpetual, who would not dare solemnly to pledge himself that in a short time this will be greater than all the neighbouring states? LIVY.

28th September, 1855, 9 *o'clock, a.m.*

ENGLISH LANGUAGE AND LITERATURE.—*Examiner, Rev. C. F. Darley, A.M.*

1. State the sources of Shakespeare's tragedy of Macbeth.
2. Explain the meanings of the following words and passages that occur in the play of Macbeth:—

"Minion," "weird," "trammel," "quell," "dudgeon."
"We rest your hermits."
"A good and virtuous nature may recoil
In an imperial charge."
"Macbeth
Is ripe for shaking, and the Powers above
Put on their instruments."
"And some I see,
That two-fold balls and treble sceptres carry."

3. Give the latest readings, *seriatim*, of the following passages in Macbeth:—

"Nor heaven break through the blanket of the dark."
"What beast was't, then,
That made you break this enterprise to me?"
"With Tarquin's ravishing strides towards his design."
"This push
Will cheer me ever, or disseat me now."
"Cleansed the stuffed bosom of that perilous stuff."
"The time has been my senses would have cooled
To hear a night shriek."

1. State the sources of the play of the Merchant of Venice.
2. Explain the meanings of the following words and passages that occur in that play:—

"I'll end my exhortation after dinner."
"Sometimes," "sonties," "cater-cousins," "regreets."
"Beshrew your eyes that have o'erlooked me."
"Fancy," "guiled," "counterfeit," "fond," "toccata."
"Let me give life, but let me not be light."
"Like cutlers' poetry upon a knife."

1st BOOK OF MILTON'S PARADISE LOST.

3. "And justify the ways of God to men." This passage of Milton is nearly identical with one written by a later poet. Name the poet, and give his version of the passage.
4. Mention some of the chief leaders of the fallen angels, and give an account of them.
5. "A leper once he lost and gained a king." Explain this passage.
6. Azazel. Wherefore so called?

MILTON'S COMUS.

"The sea-girt isles;
That like two rich and various gems inlay;
The unadorned bosom of the deep."

Cite a parallel from Shakespeare.

7. "The sounds and seas, with all their finny drove,
Now to the moon in wavering morrice move."

Explain this passage.

8. What philosophical doctrines does the elder brother hold in Comus?
9. "And took in strains that might create a soul
Under the ribs of death?"

Explain this.

Quote or indicate such portions of Macbeth, the Merchant of Venice, the 1st book of Paradise Lost, and Comus—as you may conceive to be the best specimens; and make your comments upon them.

28th September, 1855, 2 *o'clock, p.m.*

ENGLISH LANGUAGE AND LITERATURE.—*Examiner, Rev. C. F. Darley, A.M.*

1. Give a sketch of the genius of Burke and his works.

CHAUCER'S HOUSE OF FAME.

First Extract.

And smale harpers, with hir glees,
Sate under hem in diverse sees,
And gone on hem upward to gape,
And counterfeited hem as an ape;
Or as craft counterfeit kind
Tho saw I standen hem behind
A farre from hem all by hemselve
Many a thousand times twelve,
That made loud minstralcies
In cornemuse and shalmies.
And many another pipe,
That craftely began to pipe,
Both in douced and in rede,
That ben at feasts with the brede.
And many a floyte and litling horne,
And pipes made of greene corne,
As have these little heerd gromes,
That keepen beastes in the bromes.
There saw I eke famous old and yong,
Pipers of all the Dutch tong,
To learn love daunses, springs
Reyes and the straunge things,
Tho' saw I in another place,
Standing in a large space,
Of hem that maken bloody soun
In trumpe beme and clarioun;
For in fight and bloodsheddings
Is used gladly clarionings.
There saw I sit in other sees,
Playing upon other sundry glees,
Which that I cannot neven
Mo than sterres ben in heven;
Of which I n'ill as now not rime
For ease of you and losse of time;
For time ylost, this know ye,
By no way recovered be.
There saw I playing jogelours,
Magiciens and tragetours,
And pletonisses, &c., &c., &c.

Second Extract.

What should I make lenger tale
Of all the people that I sey
I could not tell till domisdey.
When I had all this folke behold,
And found me loose and not hold,
And I amused a long while
Upon this wall of berile,
That shone lighter than a glas,
And made well more than it was
As kinde thing of fame is.
And that anone after this
I gan forth romen, till I fonde
The castell yate on my right honde,
Which so well corven was
That never such another n'as;
And yet it was by aventure
Ywrought by great and subtill cure.
It needeth not you more to tellen
To make you to long dwellen
Of these yates florishings.
Ne of compaces, ne of karvings,
Ne how the hacking in masonries,
As corbettes and imageries.
But Lord so faire it was to shewe,
But it was all with gold behewe.
But in I went, and that anone
There met I crying many one,

"A larges, a larges, hold up well!
God save the Lady of this pell,
Our owne gentill lady Fame,
And hem that willen to have a name
Of us!" Thus heard I crien all,
And fast commen out of the hall,
And shoke nobles and starlings,
And crowned were as kings,
With crownes wrought full of losinges,
And many ribans and many fringes,
Wore on hir clothes truely.
Tho' at the last, espied I
That pursevauntes and heraudes,
That crien riche folkes laudes.
It weren all and every man
Of hem as I you tell can,
Had on him throwe a vesture
Which men clepe a coate armure;
Embroudred wonderly riche,
As though they were not yliche.
But not will I, so mote I thrive,
Be about to discrive
All these arms that there weren,
That they thus on hir coates weren,
For to me were impossible.
Men might make of hem a bible
Twenty foot thick, as I trow.

2. Render the above extracts into modern English, and point out any peculiarity of grammar or composition, &c., that may present itself.
3. What comparatively modern poet has given a version of Chaucer's House of Fame?

ESSAY.

"Chaucer's House of Fame."

MODERN LANGUAGES.—*Examiner, Professor Frings, Ph.D.*

GERMAN.—I.

A.

1. Woher ſtammt das Wort "Deutſch?"
2. Woher erklärt ſich die Verwandtſchaft zwiſchen der deutſchen und engliſchen Sprachen?
3. Woraus ſchließen die Philologen, daß die Teutonen öſtlichen Urſprungs ſind?
4. Wodurch unterſcheidet ſich die deutſche Sprache beſonders von den andern neuern Sprachen?
5. Wer gab den Deutſchen den Namen "Germanen?"
6. Welchen Urſachen ſchreibt man den hohen Standpunkt der deutſchen Proſa im 16ten Jahrhundert zu?
7. Welchen Zeitraum umfaßt die Bildungsgeſchichte der deutſchen Sprache von ihren erſten Anfängen bis zu ihrem gegenwärtigen Standpunkte?
8. Hat die deutſche Sprache irgend eine, auch noch ſo entfernte, Verbindung mit irgend einer andern Sprache, und mit welcher?

B.

1. Nenne die deutſchen Zeitwörter, die im zweiten Particip die Form des Infinitifs beibehalten, und unter welchen Umſtänden.
2. Unterſcheide zwiſchen "Man tanzte über mich," und "Man tanzte über mir."
3. Was für einen Einfluß hat das Bindewort auf die Bildung eines Satzes? Giebt es Ausnahmen und welche?
4. Wann wird im Deutſchen ſſ gebraucht, und wann ß, und wie unterſcheiden ſie ſich in der Ausſprache?
5. Was bedeutet "Überſetzen" mit dem Nachdruck auf der erſten Silbe, und was, mit dem Nachdruck auf der dritten?
6. Unter welchen Umſtänden wird das Vorwort von dem Zeitworte abgeſchnitten und ans Ende des Satzes gebracht?
7. Unterſcheide zwiſchen "Es iſt" und "Es giebt," und erwähne die andern etwaigen Eigenthümlichkeiten, die dabei obwalten.
8. Welche Zeitwörter erforden im Deutſchen den darauf folgenden Infinitif ohne das Vorwort zu?

II.

Translate into German:—

To say the truth, eating seems to make a grand ingredient in all English parties of zeal, business, or amusement. When a church is to be built, or an hospital endowed, the directors assemble, and instead of consulting upon it, they eat upon it; by which means the business goes forward with success. When the poor are to be relieved, the officers appointed to dole out public charity assemble and eat upon it. Nor has it ever been known that they filled the bellies of the poor, till they had previously satisfied their own. And yet I could forgive this people their plentiful meals on such occasions, as it is extremely natural for every man to eat a great deal when he gets it for nothing; but what amazes me is, that all this good living no way contributes to improve their good humour. On the contrary, they seem to lose their temper as they lose their appetites; every morsel they swallow, and every glass they pour down, serves to increase their animosity.

GOLDSMITH.

FRENCH—I.

A.—1. Que veulent dire les expressions "*Langue d' Oc* et *Langue d' Oil*"? Lequel de ces deux dialectes est devenu la langue française d' à-présent, et quelle est la différence de ces deux dialectes?

2. Quelle est l'origine de la langue française?

3. Comment les terminaisons latines: *atio. io, or, tas* sont-elles généralement rendues en français?

4. Qui est-ce qui a porté la langue française à sa perfection?

5. A qui les Français attribuent-ils le mérite d'avoir perfectionné l'art d'écrire en vers?

6. Nommez les langues qui ont contribué plus ou moins à enrichir la langue française?

7. Quelles sont les causes principales qui ont contribué à rendre la langue française universelle?

8. Est-ce que l'orthographe française d'à-présent diffère de celle du siècle de Louis XIV., et en quoi?

B.—1. Quelle est la différence entre *Savoir* et *Connaître*?

2. Dans quels cas les Français se servent-ils de l' adjectif au lieu de l' adverbe?

3. Est-ce que la phrase suivante est correcte? Si non, corrigez s'il vous plaît:—

"Mes soeurs s'étaient proposées de passer trois mois à la campagne, mais des accidents imprévus les en ont empêchés."

4. Mentionnez toutes les règles que vous savez sur l'emploi du subjonctif en français.

5. Est-il correct de dire, "Je couperai vos oreilles?" Si non, corrigez et donnez la règle.

6. Quand le Participe présent est-il variable et quand ne l'est-il pas? Donnez des exemples.

7. Montrez en quoi l'usage des nombres cardinaux diffère en français de celui qu' on en fait en anglais.

8. Est-ce que la prose française admet des inversions, et lesquelles?

II.—Translate into French:

France and England may each of them have some reason to dread the increase of the naval and military power of the other; but for either of them to envy the internal happiness and prosperity of the other, the cultivation of its lands, the advancement of its manufactures, the increase of its commerce, the security and number of its ports and harbours, its proficiency in all the liberal arts and sciences, is surely beneath the dignity of two such great nations. These are the real improvements of the world we live in. Mankind are benefited, human nature is ennobled by them. In such improvements each ought, not only to endeavour itself to excel, but, from the love of mankind, to promote, instead of obstructing the excellence of its neighbours. These are all proper objects of national emulation, not of national prejudice or envy.

SMITH—*National Prejudice.*

ITALIAN.

I.—1. La Lingua Italiana, quella cioè che coltivano i letterati, no si usò e non fu ben sistemata prima del che secolo?

2. Perchè la lingua dei Troubadori era detta romanza?

3. Quali fra i restauratori benemeriti della Lingua Italiana, che scrissero poco innanzi del *Dante* sono digni di menzione?

4. Qual è l'opera di Boccaccio la più pregiata, e a cui deve singolarmente la celebrità del suo nome?

5. Menzionate gli uomini grandi per quanti possete ricordarvi nello secolo diciottesimo.

6. Citate i più celebri italiani Scrittori drammatici.

7. Che sono i più celebri Epici italiani? Citate i loro poetici componimenti i più considerabili.

8. Che secolo vide nascere Lodovico Ariosto?

9. In vista di qual opera le più colte Nazioni d'unanimi consenso danno all' Ariosto il titolo di divino?

10. Perchè nel secolo diciasettesimo si vide languir di nuovo il buon gusto della italiana letteratura?

11. Come si forma il plurale dei sostantivi italiani?

12. Come, in italiano, si esprimano la comparazione di uguaglianza, e come, se voglia annunziare superiorità?

13. Che secolo era detto "*Il Secolo d'oro*" della italiana letteratura, e perchè?

14. Quando il participio passato in italiano si regola col suo nominativo, e quando colla sua concordanza?

II.—Translate into Italian:—

When I was a child, of seven years of age, my friends, on a holiday, filled my pockets with coppers. I went directly to a shop where they sold toys for children; and, being charmed with the sound of a whistle that I saw on the way in the hands of another boy, I voluntarily offered him all my money for one. I then came home, and went whistling all over the house, much pleased with my whistle, but disturbing all the family. My brothers, and sisters, and cousins, understanding the bargain I had made, told me I had given four times as much for it as it was worth. This put me in mind what good things I might have bought with the rest of the money; and they laughed at me so much for my folly, that I cried with vexation, and the reflection gave me more chagrin than the whistle gave me pleasure.

FRANKLIN.

To be re-translated into Irish :—

This was a distinguished crew for one ship. For it is, indeed, certain that the sea had not supported, and the winds had not wafted from Ireland, in modern times, a party of one ship, who would have been more illustrious or noble in point of genealogy, or more renowned for deeds, valour, prowess, or high achievements, than they, if God had permitted them to remain in their patrimonies, until their children should have reached the age of manhood. Woe to the heart that meditated, woe to the mind that conceived, woe to the council that decided on the project of their setting out on this voyage, without knowing whether they should ever return to their native principalities or patrimonies.

To be translated into Irish :—

All the histories of the middle ages, which have been found in other countries, have been printed. The English have, I think, the best histories of that period. I do not see why the "Psalter of Cashel" should not be printed, as well as "Robert of Gloster." If I were to give my opinion to the Society of Antiquaries I should propose that they should be printed in two columns, one English and the other Latin, like the "Saxon Chronicle," which is a very valuable monument, and above all things that the translation should be exact and literal. Until something of this kind is done that ancient period of Irish history which precedes official records cannot be said to stand upon any proper authority.

BURKE.

1. State the changes which the article, in Irish, causes in the beginning of nouns.
2. Enumerate the indefinite pronouns, and point out any which are declinable.
3. State the various ways in which the infinitive mood of active verbs is formed, and its peculiarity which distinguishes Irish from most other languages, in governing different cases.
4. Point out the various modes in which compound terms are formed.
5. When is the adjective not placed after its substantive? and when is its form independent of the substantive?
6. Enumerate and explain the requisites of Dan direach verse, giving their Irish designations.

1st October, 1855, 9 *o'clock, a.m.*

MATHEMATICS.—*Examiner, Rev. Robert Carmichael, A.M., F.T.C.D.*

1. n being an odd number and the roots of the equation

$$x^n - px^{n-1} + qx^{n-2} - \&c., = 0$$

being in arithmetic progression, show that this equation can be reduced one degree, and investigate the law of the coefficients in the reduced equation.

2. The roots of the equation $x^3 - px^2 + qx - r = 0$ being a, b, c, transform this equation into one whose roots are

$$\frac{1}{b+c}, \quad \frac{1}{c+a}, \quad \frac{1}{a+b}.$$

3. Investigate the formula which determines the amount of an annuity, left unpaid for n years, and on each sum of which stated simple interest is allowed.

4. Assets amounting to £3,000 are required to be divided in proportional shares between three creditors, X, Y, Z, the sum due to Y being three times the sum due to X, and the sum due to Z as large as those due to X and Y together.

5. Find the sum of 10 terms of the series 3, 6, 12, 24, &c.

6. Prove the formula for the spherical excess

$$\text{Sin } \tfrac{1}{2} \text{E} = \frac{\sqrt{\sin s \sin (s-a) \sin (s-b) \sin (s-c)}}{2 \cos \tfrac{1}{2} a \cos \tfrac{1}{2} b \cos \tfrac{1}{2} c}.$$

7. If 11 white and 10 black balls be thrown into a bag, calculate the probability that a person will draw out first a white and then a black ball.

8. If

$$\text{U} = \text{A}_0 + \text{A}_1 x + \text{A}_2 x^2 + \text{A}_3 x^3 + \ldots + \text{A}_n x^n,$$

show that, in general,

$$\text{F}(x\text{D}_x)\text{U} = \text{F}(0)\text{A}_0 + \text{F}(1)\text{A}_1 x + \text{F}(2)\text{A}_2 x^2 + \ldots + \text{F}(n)\text{A}_n x^n.$$

9. Eliminate the arbitrary functions from

$$z = x\Phi(z) + y\Psi(z),$$

and state the geometric interpretation of this equation.

10. Investigate the general value of the radius of curvature for the hypocycloid

$$x^{\frac{2}{3}} + y^{\frac{2}{3}} = a^{\frac{2}{3}}$$

1st October, 1855, 2 *o'clock, p.m.*

MATHEMATICS.—*Examiner, Rev. Robert Carmichael, A.M., F.T.C.D.*

1. If a body revolve in a circle under the action of a force directed to a point in the circumference, investigate by Newton's method the law of force.

2. If a body revolve in a spiral, which cuts all the radii at a constant angle, investigate the law of force.

3. If two tangents be drawn to an ellipse, show that any third tangent produced to meet the chord of contact of the first two, is divided harmonically.

4. If through two points on a sphere (M, N) two small circles be described, and from any point O on M N produced, an arc be drawn intersecting the circles in the points A, A′, B, B′, prove that the points of bisection of the arcs OA, OA′, OB, OB′ are in spherical involution.

5. Prove that for the surface whose equation, referred to polar co-ordinates, is

$$\phi F_1(r) + \theta F_2(r) = 1,$$

the tangent of the angle of inclination of any spherical curve to the meridional plane is proportional to the sine of the angle made by the radius vector with the axis.

6. Given any number of points in space, p, p', p'', &c., investigate completely the nature of the locus of a point o, such that

$$m(po)^2 + m'(p'o)^2 + m''(p''o)^2 + \&c. = const.$$

7. Investigate the condition required in order that two conics

$$Ax^2 + Bxy + Cy^2 + Dx + Ey + F = 0$$
$$ax^2 + bxy + cy^2 + dx + ey + f = 0$$

may be similar, although *not* similarly placed.

8. Determine completely by spherical trigonometry the time of year in a given latitude when twilight is shortest.

9. Given duration of twilight and time of sunrise, find latitude of place and declination of sun.

10. Integrate the differential equation

$$D^2y + ax^m y = bx^n.$$

11. Integrate the differential equation

$$D^2y + m^2y = \cos.\ mx.$$

12. Evaluate $\int \frac{dx}{\sin x.\ \cos x.}$

26th September, 1855, 9 *o'clock, a.m.*

PHYSICS.—*Examiner, G. Johnstone Stoney, A.M.*

1. Statical electricity is confined to the surface of conductors; this is not the case with current electricity. How are both statements proved?

2. What causes the motion of the ponderable matter when two movable conductors are charged with statical electricity?

3. Bring an excited tube near some light conductors and non-conductors; the conductors are attracted and then repelled, the non-conductors are permanently attracted. Point out the cause of the difference of action.

4. Trace the chemical reactions in Daniell's battery, and show from them that the current will be constant if the supply of crystals be kept up.

5. Point out the causes of the rapid decrease in intensity which takes place in the copper and zinc battery.

6. Describe reactions which are consistent with our present knowledge, and which explain what takes place when the double cyanide of silver and potassium is submitted to electrolysis, the positive electrode being of silver?

7. By what experiments may the conductibility of a metal for current electricity be determined?

8. If two points in the course of a current be connected by an iron wire 1,000 feet long and $\frac{1}{6}$ of an inch in thickness, and also by one foot of a copper wire $\frac{1}{130}$ inch thick, in what proportion will the current be divided between them?

N.B.—Coefficient of conductibility of iron = 6.
Do. of copper = 38.

9. When the power of magnets is determined by the vibrations of horizontal needles, what two circumstances complicate the analysis of the results?

10. Enumerate the causes which have hitherto made it impossible to estimate or correct the influence of the iron of a ship on her magnets.

11. Show from the magneto-electric currents generated that a heavy copper ring will damp the vibrations of a compass needle.

12. (*a*) From what experiments do we know that induction always accompanies the attraction of iron by a magnet?
(*b*) How do we know that magnetism is a molecular property of the masses of matter in which it exists?

26th September, 1855, 9 *o'clock, a.m.*

MIXED MATHEMATICS.—*Examiner, G. Johnstone Stoney, A.M.*

1. Prove that couples can be compounded.

2. Deduce from mechanical considerations the differential equation of the common catenary.

3. *a*. Prove the equable description of areas under the influence of a central force.

b. Prove the expression for a central force $P = h^2u^2\left(u + \frac{d^2u}{d\theta^2}\right)$.

4. Prove the equation $\frac{d^2\theta}{dt^2} = \frac{\Sigma Pp}{\int r^2 dm}$ for the motion of a rigid body round a fixed axis.

5. If the origin of co-ordinates move according to a given law, investigate the equations for the relative motion of a free particle subjected to given forces.

6. Show that with a central force varying directly as the distance the periodic time will be independent of the size of the orbit.

7. Prove that the small vibrations of a pendulum will be isochronous.

8. One end of a uniform plank rests upon the ground, the other is supported by a string of given length from a hook at a known distance above the ground, given the length of the plank and the coefficient of friction between it and the ground, determine the limiting position of equilibrium.

9. A particle is dropped in a medium resisting as the square of the velocity, find its limiting velocity.

10. If the orbit be a circle, and the attraction directed to a point in its circumference, what is the law of force?

11. Show that the normal component of the forces acting on a free particle is $\frac{v^2}{\rho}$, where ρ is the radius of curvature of its path.

12. What is the ratio of the numbers representing the mass of a body, and its weight in pounds? and how are the units determined to which velocity, mass, accelerating force, and impressed force are respectively referred?

26th September, 1855, 2 *o'clock, p.m.*

MIXED MATHEMATICS.—*Examiner, G Johnstone Stoney, A.M.*

1. Give an outline of the method by which the horizontal parallax of the sun has been deduced from observations on transits of Venus.

2. Show that, neglecting the masses of the planets as small in comparison with the mass of the sun, Kepler's third law (that the squares of the periodic times are as the cubes of the mean distances) follows from the theory of gravitation.

3. Prove that the expression for the mean anomaly in terms of the eccentric anomaly, is

$$nt = u - e \sin u.$$

4. *mn* Voltaic cells may be arranged in a battery of n elements, each element consisting of m cells coupled together so as to act as one cell. Given the total number of cells, and the external resistance to be overcome, find m and n so that the current may be a maximum, and show that the internal and external resistances will then be equal if the given number of cells admit of such an arrangement.

5. Prove that if a telescope be adjusted, so that each emergent beam is a parallel beam, the magnifying power will be equal to the ratio of the diameter of the object-lens to the diameter of its image formed by the eye-piece.

6. Prove that the radius of the least circle of chromatic aberration of a lens $= \frac{\pi}{4} A$, where A is the aperture of the lens and π its dispersive power.

7. If δ be the minimum deviation of a ray passing through a prism whose refracting angle is ϵ, prove that the index of refraction $= \frac{\sin \frac{\delta + \epsilon}{2}}{\sin \frac{\epsilon}{2}}$

8. *a*. Investigate the formula which determines the focus to which a pencil of rays converge which are incident nearly perpendicularly on a concave spherical mirror.

b. Show that such a mirror may be used either as a magnifier of near objects, or as the object mirror of a telescope.

9. Show that it is essential to the equilibrium of a fluid that the density should be constant in each *couche de niveau*.

10. If a cubic inch of iron be thrown into a vessel containing mercury and water, how much of its weight will be buoyed up by the water?

11. If a cylindrical bottle a foot high, and with a very narrow neck, be partially filled with water, and then gently inverted, a little of the water will flow out, but the rest will be retained by the pressure of the atmosphere; supposing that the bottle is then found to be half full of water, how much has flowed out?

12. Find the law which would connect the density of an atmosphere of uniform temperature with the distance above the surface of the earth under each of the following suppositions:—

a. That gravity is constant throughout.

b. That it decreases inversely as the square of the distance from the centre of the earth.

26th September, 1855, 2 *o'clock, p.m.*

PHYSICS.—*Examiner, G. Johnstone Stoney, A.M.*

1. Describe experiments proper to determine the index of refraction, and the dispersive power of a specimen of glass.

2. Light from a luminous point passes through a narrow slit, and falls upon a screen. Show, on the wave hypothesis, that the central stripe will be dark or bright according to the distance between the slit and screen.

3. A wedge of calc spar cannot be achromatized by a wedge of glass. Why?

4. In what direction should a crystal be slit to exhibit the rings in polarized light? give the account according to the wave theory of the rings and brushes seen in the section of a crystal with one optic axis.

5. From what observations and experiments do we know the velocity of light?

6. Give an outline of the explanation of the rainbow, omitting the mathematical details.

7. What occasions the fringes often seen along the inner edge of the rainbow?

8. From what observations do we know that the human eye is not achromatic? and why does this defect not derange our vision?

9. How may the field of view and magnifying power of a telescope be determined?

10. If a bladder, which is three-fourths full of air at the freezing temperature, and when the barometer shows a pressure of 15 lbs. per square inch, be heated to the temperature of boiling water, with what pressure per square inch will it be then distended, the coefficient of expansion of air being 0·00367?

11. Describe the method of mixtures, and the precautions necessary in employing it.

12. Give the accounts according to the wave and emissive theories of the colours of thin films.

27th September, 1855, 9 *o'clock, a.m.*

CHEMISTRY AND CHEMICAL PHYSICS.—*Examiner, John Blyth, M.D.*

1. What is the composition in equivalents and in volumes of carbonic oxide? Give in symbols its preparation from ferrocyanide of potassium.

2. Give the composition in volumes, and the combining measure, of binoxide of nitrogen; calculate its specific gravity.

Sp. gr. of N = 0·9713.
Do. of O = 1·1056.

3. Give the formulæ and the specific gravity of the different hydrates of sulphuric acid, and explain the reactions which take place in preparing the Nordhausen acid.

4. What is the rule for judging of the neutrality of an oxysalt, on the supposition that it is composed of a metallic oxide and an acid. Give in symbols according to this theory the general formulæ of a neutral and of a basic salt, formed by a protoxide, and by a sesquioxide, with a monobasic, bibasic, and tribasic acid.

5. Explain the Binary theory of salts.

6. Explain the difference between constitutional water and water of crystallization.

7. In what manner has it been shown that many basic salts can be regarded as neutral; exemplify this in the basic sulphate of copper ($4\,Cu\,O, S\,O_3 + 5\,H\,O$).

8. Mention the metals of the magnesian family. Give the reason why the solution of their neutral salts is only partially precipitated by ammonia.

9. How is commercial bleaching powder prepared? What is its constitution? What would be the effect of elevating the temperature during its preparation?

10. How much $Pb\,O\,\overline{A} + 3HO$, and $Na\,O\,S\,O_3 + 10HO$, are to be employed to produce 10 lbs. of $Na\,O\overline{A} + 6HO$?

Pb = 103·7
Na = 23·
C = 6·
O = 8·
S = 16·
H = 1·

11. Give the empirical and rational formulæ for acetate of oxide of methyl, and formiate of oxide of ethyl. To what generic class do such compounds belong which have this similarity in composition?

12. Explain the nature of a compound radical.

13. What are Liebig's views of ferrocyanide and ferricyanide of potassium? Show in symbols the reactions which take place between the first of these and a persalt of iron, and between the last and a protosalt of iron.

14. State shortly the doctrine of substitution; explain the difference between a chemical and a mechanical type; show that acetic and chloracetic acids belong to the same chemical type.

15. The compound ammonias are arranged under three heads according as one, two, or three equivalents of H are replaced by a compound radical; give the names and the general formulæ of these three classes. State the mode of preparing them, their general properties, and the points in which the ammonium groups differ from the others.

27th September, 1855, 2 *o'clock, p.m.*

CHEMISTRY AND CHEMICAL PHYSICS.—*Examiner, John Blyth, M.D.*

HEAT.

1. What is observed in the rate of expansion of gases as compared to solids and fluids? Calculate the volume which 10 cubic inches of air at 75° F. occupy, when reduced to the temperature of 60° F.

N.B.—Air expands $\frac{1}{491}$ of its volume at 32° for 1° F.

2. Define the term specific heat, and state the different modes of estimating it.
3. Under what circumstances does heat become latent, and is again evolved?
4. One pound of steam at 212° is passed into five pounds of ice at 32°, what will be the temperature of the mixture?

Latent heat of steam, =967°
Do. of water, =142°

5. Explain why there would be no economy in substituting other liquids for water as materials for generating vapour in the steam engine, although the latent heat of such vapour may be less than that of steam.
6. What relation has been found to exist between the specific heat and chemical equivalents of bodies?
7. The same weight of steam at 212° and 250° is passed into the same quantity of water, what is the result? State Watt's law with regard to the heating effects of steam at different temperatures, and the correction of it made by Regnault.
8. Liquids give off vapour from their surface at temperatures below their point of ebullition; in what manner is this ascertained, and a numerical value given to the amount of evaporation for different temperatures?
9. What is the point of maximum density of a vapour? How do pressure and cold act in reducing a vapour to the liquid form.
10. Calculate the weight of aqueous vapour contained in a cubic foot (=1728 c. in.) of air at 70° F., from the following data:—

Dew point, 60° F.
Weight of 100 cubic inches of aqueous vapour at 60°= 0·338 grains.
Expansion of air for 1° F. = $\frac{1}{491}$ of its volume at 32°.

ELECTRICITY.

1. Explain Faraday's theory of electrical induction.
2. Explain the construction and mode of using the unit jar for measuring out definite quantities of electricity.
3. Describe the mode of ascertaining the force of attraction between two charged surfaces.
4. Ten units of electricity are distributed over three perfectly equal and similar Leyden jars; what is the attractive force in each jar compared with that of one of the same jars charged with the whole quantity of electricity?
5. What is the most indispensable condition of electrolysis?
6. Acetate of lead is decomposed by a galvanic current between platinum plates, metallic lead being deposited at the negative pole, and binoxide of lead at the positive; in what respect does this decomposition differ from the electrolysis of water?
7. The energy of a voltaic current is proportionate to the chemical action; give the reason why common zinc, which is much more readily acted on than amalgamated zinc by dilute sulphuric acid, does not contribute so much to the energy of the current as the latter.
8. Calculate the number of cubic inches of H which would be produced by decomposing water by a voltaic current from a compound battery, in each cell of which 32·6 grains of zinc are dissolved.

N.B.—100 grains of H, at 60° F. and 30° B., weigh 2·14 grains.

CRYSTALLOGRAPHY.

1. What are the simple and compound forms of a crystalline system?
2. In what manner must the secondary planes cut the axes of the regular octahedron, so as to produce by development the rhombic dodecahedron?
3. What is the compound form of the regular system, the notation of the face of whose dominant form is, . . . a : a : a ; and of the
modifying faces, . . . a : ∞ a : ∞ a
a : a : ∞ a.

4. There are two octahedrons in the square prismatic system; give the notation of their respective faces. Why does the regular system contain only one octahedron?
5. Define the relations of the principal and secondary axes of the rhombohedral system. What is its most characteristic hemihedral form?
6. In the rhombohedral system how are the two classes of hexagonal dodecahedrons distinguished by the position of the secondary axes? Give the notation of the faces in each case.

28th September, 1855, 9 *o'clock, a.m.*

ZOOLOGY.—*Examiner, Dr. Melville.*

1. Give an account of the mechanism of respiration in the *Vertebrata.*
2. Contrast the phases of the development of the brain in man with the forms of that organ in the lower *Vertebrata.*
3. Describe the phenomena connected with the so-called alternate generation in the *Medusæ.*
4. Re-arrange the *Radiata* of Cuvier according to recent anatomical and physiological researches.
5. Contrast the *Faunæ* of the Southern Continents.

BOTANY.

1. Describe the various modes of origin of the pistil.
2. Describe the development of the embryo in *Coniferæ.*
3. Give a sketch of the function of nutrition in plants.
4. Refer the plants on the table to their respective natural orders, and describe them in technical terms.
5. Give a sketch of the laws regulating the distribution of vegetables.

28th September, 1855, 2 *o'clock, p.m.*

GEOLOGY AND PHYSICAL GEOGRAPHY.—*Examiner, J. Beete Jukes, M.A., F.R.S.*

1. Describe in general terms the external characters and chemical composition of the following minerals:—Quartz, common feldspar, mica, hornblende, augite, olivine.
2. To what class of rocks should you refer those called "trachyte," "dolerite," "domite," and "clinkstone," and what is the general composition of each of them?
3. Define the terms "dip," "fault," "contortion," "anticlinal, and synclinal lines," "joint" and "cleavage."
4. In four different localities I met with the following groups of fossils, (*a*), (*b*), (*c*), (*d.*) To what formation should you refer each of these groups?

a. Ananchytes ovatus,
Terebratula carnea,
Inoceramus Cuvieri,
Lima spinosa,
Belemnitella mucronata.

b. Pentacrinus basaltiformis,
Gryphœa incurva,
Belemnites acutus and penicillatus,
Ammonites bifrons, communis and heterophyllus.

c. Calamites Suckowii,
Lepidodendron elegans,
Neuropteris acuminata,
Stigmaria ficoides.

d. Actinocrinus triacontadactylus,
Platycrinus granulatus,
Pentremites ellipticus,
Chonetes (productus) comoides,
Productus concinnus,
Spirifer cuspidatus and Sowerbyi,
Actinoceras (orthoceras) giganteum.

5. What genus of zoophyte is that which is peculiarly characteristic of, and absolutely confined to, Silurian rocks.
6. In what formations do the following fossil genera occur respectively, and what are their most obvious relations to living animals: labyrinthodon, plesiosaurus, iguanodon, mososaurus, palœotherium, mylodon.
7. Give a brief account of Darwin's classification of coral reefs and of his theory of their formation.
8. Where are situated the rainless districts of the world, and what are the reasons of the absence of rain in those districts?
9. What is the approximate geological date of the elevation of the higher mountains of the British Islands—namely, the Grampians, the Cumberland, the Welsh, and the Wicklow Mountains, also of the Alps, and of the Himalayahs?

29th September, 1855, 9 *o'clock, a.m.*

LOGIC.—*Examiner, Rev. James M'Cosh, I.L.D.*

1. Give a brief historical and critical account of the theory of the Conceptualists as to the formation of general notions and common terms. Mention any errors or defects which you may have noticed in their views.
2. What are the objections urged (not in former times but) in the present day against the syllogistic analysis of reasoning? Can they be met; and if so, in what way?

3. To the proposed plan of appointing young men to public offices by examination, it is objected that some of them may not turn out good men of business; and it is argued that it is, therefore, better to keep to the old plan of patronage. Point out the fallacy in the above.

4. Metaphysicians have laid down the maxim that whatever is inconceivable must be false, and hence conclude that there can be no event without a cause. Mr. Mill replies, that it was at one time thought to be inconceivable that there should be antipodes—that is, persons with their heads in the same direction as our feet. Put the above in the correct form, and examine it logically.

5. A distinction has been drawn between contingent and necessary truth. What is the nature of this distinction, and on what does it rest? Is there really such a distinction?

6. What is the meaning of the phrases *a priori* and *a posteriori?* What is the difference between the *a priori* and *a posteriori* methods of investigation? Do you reckon the *a priori* method allowable in any department; and if so, under what conditions?

7. Are mathematics founded on *a priori* principles? In answering this question you are expected to state and discuss the opinions which have been entertained as to the nature of definitions and axioms, and their claims to be regarded as the foundation of mathematics.

8. For what reasons would you argue that it is necessary to proceed in the way of induction in the scientific investigation of the material universe? Is it necessary to proceed in the same way in the investigation of the human mind? Discuss the question which has been started as to whether we may expect more from induction or deduction in the future history of science.

9. What is to be understood by the phrase "laws of nature" as used in physical science? Comment upon the statement of Bacon about axioms, causes, and forms, and upon the distinction drawn between the discovery of classes and causes.

10. What is meant by the explanation of a phenomenon?—what by the explanation of a law? Can hypotheses be altogether discarded in scientific investigation? If not, under what conditions are they to be used, and how tested?

29th September, 1855, 2 *o'clock, p.m.*

METAPHYSICS.—*Examiner, Rev. James M'Cosh, LL.D.*

1. Give a psychological account of the phenomena of habit, mentioning its peculiarities and pointing out the mental laws to which these are to be referred.

2. As an exercise in psychological analysis give what we may conceive to have been the thoughts and feelings of Adam and Eve on being driven out of Eden, and refer them to their appropriate mental powers according to any classification of the faculties which may seem to you the preferable:

> The world was all before them, where to choose
> Their place of rest, and Providence their guide,
> They, hand in hand, with wandering steps and slow,
> Through Eden took their solitary way.

3. What is the difference between Beauty and Sublimity, between Wit and Humour?

4. Name the principal works of Leibnitz, sketch his philosophic character, and illustrate it by his theory of optimism.

5. Give a brief account of the ideal system of Berkeley, and say whether Hume drove it to its legitimate consequences, and whether Reid properly apprehended it and sapped its foundations.

6. In what consequences does the Speculative Reason land us according to Kant? How did he save himself from these consequences? Was he successful in this?

7. What is the nature of the argument from Common Sense? When are we entitled to appeal to the principles of common sense? What are the marks or criteria of these principles?

8. What is the difference, according to Brown, between Simple and Relative Suggestion? What objections may be taken to the use of these phrases, and to the view which they give us of the mental facts which they are intended to express? How does Brown classify the relations which the mind can discover?

9. It is a common opinion among metaphysicians that the idea of, and belief in, causation does not proceed from experience: give the arguments by which they support their views, and sketch the various forms assumed by the *a priori* theory on this subject.

10. What is Locke's account of the nature and origin of the idea of the infinite? State in contradistinction the view of Cousin. Comment upon the general subject.

1st October, 1855, 9 *o'clock, a.m.*

JURISPRUDENCE.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. (*a.*) How would you distinguish the questions relating to poor laws, which are peculiar to jurisprudence, from those with which political economy is concerned?
   (*b.*) What are the principal arguments in favour of taxation for the relief of destitution?
   (*c.*) When was the labour test first introduced into English legislation respecting mendicancy?

2. Tribunals, it is said, were not originally established to determine rights. Explain this observation, and also that of Savigny, that the criminal makes earlier and greater progress than the civil law.

3. Do you consider civil procedure and criminal law as parts of public or of private law?

4. Lord Bacon shows that laws may be retrospective in their operation, although in terms relative only to future transactions.

5. State briefly the principal arguments in favour of and against the custom of primogeniture, as it exists in England.

6. Explain the principles of the change which has taken place in modern times in the policy of the laws relative to debtors and bankrupts.

7. Explain the origin and policy of the usury laws, and the considerations which led to their abolition in England.

8. (*a.*) Are there any kinds of business which partnerships, with limited liability, are peculiarly unfit to carry on successfully?

(*b.*) Should the law provide for such cases or not, and by what principle should its interference or non-interference be governed?

9. What are the arguments in favour of having, in certain localities, different courts of concurrent jurisdiction?

10. What are the arguments against the establishment of different courts of peculiar and exclusive jurisdiction?

11. Are there any subjects, independent of those specified by Bentham, the jurisdiction over which is properly assigned to particular courts?

12. State briefly the principles by which proceedings in courts of appeal should be regulated.

1*st October*, 1855, 2 *o'clock, p.m.*

POLITICAL ECONOMY.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. The excellence of Egyptian and Indian art in ancient times has been attributed to the institution of castes.

(*a.*) To what causes does Adam Smith refer the early improvement of Egypt and India?

(*b.*) Can you show that the institution of castes really tended to secure a considerable industrial advantage?

(*c.*) Without any artificial classification of employment, the advantage just referred to has been much more fully obtained in Great Britain?

2. "The invention of fire-arms is certainly favourable both to the permanency and extension of civilization" (*Wealth of Nations*, Book V., chap. 1). Upon what grounds does Adam Smith make this observation?

3. If all the glass in the houses of Dublin were destroyed by a storm, how much of the price of replacing it, if any, would be clear gain to glaziers, &c.? and how much would be a loss to the householders, without any equivalent gain to others?

4. What change in the price of *linen* would be likely to follow a considerable and permanent fall in the price of *raw cotton*, no change taking place at the same time in the cost of growing *flax*?

5. The amount of stock in the public funds, held by Irishmen, has been referred to as a proof that there is no want of capital in Ireland.

(*a.*) Is stock in the funds capital?

(*b.*) If not, is the argument valid?

6. What effect is each of the following circumstances calculated to have upon the price of the 3 per cent. consols, and why:—

(*a.*) A bad harvest?

(*b.*) A government loan?

(*c.*) A sensible fall in the value of gold?

(*d.*) The payment of the public dividends?

7. Explain the principle of Mr. Pitt's sinking fund, and point out its defects.

8. The last government loan was effected by the Chancellor of the Exchequer, on the following terms:—For every £100 advanced, he agreed to give £100 stock, in the 3 per cents., with an annuity of 14*s.* 6*d.* for thirty years.

(*a.*) Why was this annuity added to the stock?

(*b.*) State the advantages and disadvantages of borrowing on terminable annuities.

9. "A bounty upon the exportation of corn, as well as every other bounty upon exportation, imposes two distinct taxes upon the people."—*Wealth of Nations*, Book IV., chap. 5.

(*a.*) Is this true of a bounty on the exportation of corn? and if so, why?

(*b.*) Is it true of every other bounty on exportation?

10. "The quotation of gold at Paris is about at par (according to the last tariff), which at the English mint price of standard gold, *gives an exchange of* 25·17; and the *exchange at Paris on London at short being* 25·12½; it follows that *gold is about* 0·18 *per cent. dearer in Paris than in London.*"—*Economist*, September 15. Explain, in general terms, the meaning of the words in italics, and the reasoning by which the conclusion was deduced, that gold was *dearer in Paris than in London.*

11. Explain briefly the causes which determine the natural amount of the currency.

12. (*a.*) How were the issues of the Bank of England regulated during the suspension of cash payments?

(*b.*) How, from 1819 until 1844?

(*c.*) How have they been regulated since 1844?

EXAMINATION FOR THE DEGREE OF M.D.

18th September, 1855, 9 *o'clock, a.m.*

Examiner, Doctor Gordon.

1. What are the symptoms, anatomical characters, and proper treatment of acute inflammation of the peritoneum?
2. What are the symptoms and general anatomical characters of chronic inflammation of the peritoneum?
3. Is either acute or chronic inflammation of the peritoneum often found as an idiopathic disease? Under what circumstances are they respectively most usually encountered.
4. What are the organic lesions of the peritoneum, independent of acute or chronic inflammation?
5. What are the diseases with which acute peritonitis may be confounded, and what are the chief diagnostic phenomena?
6. What are the symptoms which should induce an unfavourable prognosis in a case of measles; and how would you treat those symptoms?
7. What are the symptoms of *laryngitis œdematosa?* Describe its anatomical characters, diagnosis, and treatment.
8. Write prescriptions in Latin, without any abbreviations, for the administration of quinine in intermittent fever, and of hydrocyanic acid in the paroxysmal cough of phthisis.

18th September 1855, 2 *o'clock, p.m.*

SURGERY.—*Examiner, Christopher Fleming, M.D., F.R.C.S.I., M.R.I.A.*

1. Under what conditions of wounds are sutures required? State the several varieties in use, and the necessary precautions when they are employed.
2. What are the characteristic distinctions between acute and chronic abscesses; and what is the treatment suited to each?
3. Specify the dangers incidental on injuries of joints; and describe those cases in which immediate amputation is demanded, and those in which delay is justifiable.
4. In Sir Astley Cooper's work on diseases of the breast, what classification of those diseases has he adopted, and what diseases has he described?
5. Note those cases of schirrhous tumours of the breast, in which the removal of the organ is admissible, and those in which it is not.

19th September, 1855, 9 *o'clock, a.m.*

MODERN LANGUAGES.—*Examiner, Professor Frings, PH.D.*

FRENCH.—I.

Translate into French:—

In the spring of 1837, a woman, aged about forty, was admitted at an early period of fever. She presented the symptoms of an ordinary and rather mild case of maculated typhus. She had attended a person who died of peculiarly malignant fever, and also washed the clothes of the patient; and, from the first, had a presentiment of death which nothing could shake. She gradually became more collapsed; the surface was of a violet hue, the countenance sunken, and the skin and breath cold. From the commencement of the second week, although the heart's impulse was strong, and the sounds remarkably distinct, no pulse could be perceived at the wrist. In this condition she remained for many days, during which time every possible stimulating treatment was resorted to. On the fifteenth day the surface was icy cold, but the heart continued to act with vigour; and as we could find no evidence of organic disease in any of the cavities, I determined to attempt the transfusion of blood. About six ounces of recently-drawn blood were injected into the median basilic vein; a slight re-action followed. The pulse, however, did not return; and she died on the eighteenth day of the disease.

Translate:—

Une jeune fille âgée de dix-huit ans, domestique, alla plusieurs fois, sept jours avant de tomber malade, dans la chambre d'une personne qui avait la petite vérole; elle n'a point été vaccinée. Entrée à l'hôpital le 8 août, elle avait commencé à éprouver le 30 juillet, un malaise général et de l'anorexie. Le 1er août elle eut des étourdissements, des nausées, et elle vomit. Le 2 août, mêmes accidents; maux de reins; elle s'alite. Le 3, elle n'a plus ni vomissements, ni nausées, mais elle est accablée et elle ne se lève pas. Dans la matinée du 4 août, on s'aperçoit que la figure est couverte de boutons. L'éruption se développe jusqu' au 10 août, époque à laquelle nous examinons la malade. Elle est alors parvenue au septième jour plein de l'éruption.

Toute la peau est couverte de nombreuses pustules qui constituent partout une éruption des plus confluentes; ces pustules sont blanches, aplaties, plusieurs ombiliquées. La malade n'accuse d'autre douleur qu'une cuisson générale de la peau. Il n'y a plus de céphalalgie. La langue est couverte d'un enduit jaunâtre. Le ventre est souple et indolent; il n'y a pas eu de selles depuis trois jours.

ANDRAL—*Clinique Médicale.*

III.

On a généralement observé que dans l'espèce humaine, les individus fémelles sont plus gras que les individus mâles: c'est que les femmes ont chez nous des habitudes casanières et sédentaires qui permettent l'accumulation de la graisse, tandis que les hommes, appelés, par leur genre de vie tout extérieur, à faire plus d'exercice physique et moral, font par cela même une plus grande dépense de matériaux nutritifs. Peut-être y a-t-il aussi, indépendamment du genre de vie, quelque cause organique qui dispose le sexe féminin à l'embonpoint. Vous aurez pu remarquer, par exemple, que, parmi les volailles qu'on engraisse, les mâles réussissent moins bien que les fémelles, ce qui ne peut dépendre, comme dans le cas précédent, des différences dans l'activité des uns et des autres.

Il est impossible de méconnaître un rapport notable entre le tempérament et la disposition à l'embonpoint. Je ne doute pas que vous n'ayez tous été frappés de la sècheresse des chairs, et de la maigreur de la plupart des sujets bilieux. Vous aurez remarqué, au contraire, que les individus sanguins s'engraissent facilement à cette époque de la vie qu'on nomme l'âge mûr et où l'accroissement est terminé depuis un peu de temps. Les sujets lymphatiques ont la même disposition lors toutefois que leur tempérament n'est pas exagéré.

Ducrotay de Blainville—*Cours de Physiologie.*

German.—I.

Translate into German :—

Those severe wounds of the extremities, inflicted by shot and shells, are not only accompanied with injury to the muscles, the blood-vessels, and nerves, but it is by the extreme violence done to the bones that such wounds are more peculiarly distinguished. Very extensive breaches in the muscles of a limb, from a gun-shot wound, are often speedily repaired under the most simple treatment; but when such a wound is complicated with injury of the principal blood-vessels and nerves, the case becomes peculiarly hazardous, even independently of the hæmorrhage. Although this may be successfully controlled in the first instance, yet we know from experience that musket wounds which injure the main artery of a limb are very frequently followed by gangrene, probably from the neighbouring veins and nerve being involved in the injury; and perhaps also from the swelling and tension, consequent upon the wound, impeding the passage of the blood through the anastomosing vessels to the lower part of the limb.

Translate :—

Venne l'assegnato giorno, e *Pippo* andò alla casa del pittore, accompagnato da una mascherata di staffieri, vestito che parea un Duca. Il pittore gli fece gentilissima accoglienza; *Pippo* gli fu grato, lo commendò della sua gran fama, trasse fuori un oriuolo d'oro, lo fe' suonare per saper, diceva, a qual' ora si cominciava il ritratto ; e nell'atteggiamento delle dita scoperse, ch' esse erano fornite di splendidissime anella, e si pose a sedere.

Il pittore noverava gli scudi con la memoria, e tanto più gli parea di averli in mano, perchè l'originale gli parea facile ad imitarsi. Avea *Pippo* un visaccio largo, con certi lineamenti o piuttosto colpi sì fieri, che l'avrebbe quasi ritratto ogni uomo col carbone: bocca larga, labbra grosse, colorito piuttosto pagonazzo che vermiglio, occhy grandi e celesti, ed uno sperticato nasaccio, verso le ciglia schiacciato e appuntato sopra la bocca.

GOZZI.

III.

Venne la sera, e 'l cielo era più sereno del solito, e i servidori miei dopo cena andarono presto a dormire ; a me parve bene di aspettare per vedere come si ponea la luna, la quale credo che fosse settima. Aperta la finestra, che guarda verso occidente, la vidi avanti mezza notte ascondersi dietro il monte di S. Martino con la faccia piena di tenebre e di nubi, e serrata la finestra mi posi sopra il letto ; ma dopo di avere un buon pezzo vegliato, cominciando a dormire, mi risvegliò un rumore e un terremoto, il quale non solo aperse le finestre, e spense il lume, ch' io soglio tenere la notte, ma commosse dai fondamenti la camera, dov'io stava. Essendo dunque in cambio del sonno assalito dal timore della morte vicina, uscii nel chiostro del monasterio, ov' io abito, e mentre tra le tenebre uno cercava l'altro, e non si potea vedere, se non per benefizio di qualche lampo, cominciammo a confortarci l'un l'altro.

PETRARCA—*La Tempesta di Mare.*

19th September, 1855, 2 *o'clock, p.m.*

MEDICAL JURISPRUDENCE.—*Examiner, Dr. William Barker.*

1. State the poisonous doses of arsenic, opium, hydrocyanic acid, and corrosive sublimate.
2. What are the objections to the use of Marsh's test in discovering the presence of arsenic?
3. What antidotes may be employed in cases of arsenical poisoning?
4. What are the tests for hydrocyanic acid?
5. If you found red stains on a piece of cloth, what mode of examination would you adopt to ascertain if they were caused by blood?
6. Can human blood be distinguished from that of other animals, and by what means?
7. What circumstances would guide you in deciding whether a person had committed suicide by hanging, or was hanged after death?
8. What are most frequent natural causes of death in new-born infants?
9. Is the proportion of still-born children greater in legitimate or illegitimate births?
10. In cases of asphyxia from poisonous gases, what remedies would you employ?
11. What are the different modes in which poisonous gases may cause death?
12. In cases of death from lightning, what *post mortem* appearances are generally observed on the dead body?

19th September, 1855, 2 *o'clock, p.m.*

MATERIA MEDICA AND PHARMACY.—*Examiner, Dr. William Barker.*

1. What principles of classification may be adopted in the arrangement of the Materia Medica?
2. What purely physical agents are employed in the treatment of disease?
3. How is nitric acid prepared? What are the impurities usually found in it, and what are its uses in Pharmacy?
4. Describe the different processes for obtaining calomel, and write in symbols the decompositions which occur during the processes.
5. With what substances is iodide of potassium incompatible?
6. Describe the processes for obtaining iodide of potassium, and the changes which take place.
7. How is anhydrous acetic acid prepared?
8. What alkaloids exist in cinchona bark, and how are they separated?
9. How is salicin detected when mixed with sulphate of quinine?

10. From what part of the plant is opium obtained, and what are its principal proximate constituents?
11. Describe the process for obtaining morphia.
12. Name the medicinal substances incompatible with tincture of opium.
13. Name the different pharmaceutical substances placed before you.
14. Write prescriptions containing the following ingredients:—1. Iodide of potassium in a mixture. 2. Tartar emetic, to produce diaphoresis. 3. An expectorant mixture containing the lobelia inflata. 4. Pills containing pulv. opii. 5. Trisnatrate of bismuth. 6. Corrosive sublimate.

20th September, 1855, 9 *o'clock, a.m.*

ANATOMY.—*Examiner, J. H. Corbett, M.D.*

1. Describe the relations of the stomach, its coats, vessels, and nerves.
2. Describe the articular surfaces and ligaments of the shoulder joint, and state the relations of the surrounding muscles.
3. Describe the rectus abdominis muscle.
4. Describe the ligaments of the urinary bladder, and the several relations of that organ in the male subject.
5. State the boundaries of the third ventricle of the brain, and mention the parts presenting themselves on opening into the lateral ventricles.
6. Describe the origin, course, and mode of distribution of the middle meningeal artery.
7. Give a description of the pericardium, its structure and disposition, with respect to the vessels passing to and from the heart.
8. What are the connexions and relations of the triangular ligament of the urethra?
9. Describe the parotid gland.
10. Describe the temporal artery.

20th September, 1855, 2 *o'clock, p.m.*

PHYSIOLOGY.—*Examiner, J. H. Corbett, M.D.*

1. What is the nature and use of the gastric secretion?
2. How is bone primordially developed?
3. State some recent researches as to the use of the pancreatic secretion.
4. What are the peculiarities of the circulation within the head, chest, and abdomen?
5. Mention the different classes of teeth. State the appearance presented on making a vertical section. Describe the anatomical elements of the teeth and their microscopic features.
6. Describe the processes of mastication and deglutition.
7. Mention experiments made in order to determine the function of the portio dura nerve.
8. Describe the structure and action of the iris.
9. Describe the transparent media of the eye, and state the provisions in that organ for correcting or counteracting spherical and chromatic aberrations.
10. What are the physical properties and microscopical characters of the white fibrous tissue?

20th September, 1855, 9 *o'clock, a.m.*

ANATOMY.—*Examiner, J. H. Corbett, M.D.*

1. Describe the membranes of the brain.
2. Mention the several structures which compose the trachea, and describe the cervical and thoracic relations of that organ.
3. Describe the attachments of the diaphragm, its openings, vessels, and nerves.
4. Describe the pylorus, and the relations of the different portions of the duodenum.
5. Mention the bones which enter into the orbit; enumerate the muscles of the eye, and describe the relative positions of the nerves within the orbital region.
6. Contrast the right and left subclavian arteries; mention the stages and parts in relation with these vessels.
7. Describe the inguinal canal; its commencement, termination, boundaries, and vascular relations.
8. Mention the ligaments, the lobes, and fissures of the liver.
9. How is the spinal marrow protected; and in what manner are the spinal nerves connected with it?
10. What do you observe on opening into the left ventricle of the heart?
11. Describe the physical properties and microscopical characters of the yellow fibrous tissue.
12. Describe the structural anatomy of an artery.

20th September, 1855, 2 *o'clock, p.m.*

PHYSIOLOGY AND COMPARATIVE ANATOMY.—*Examiner, J. H. Corbett, M.D.*

1. Mention the changes in the state of the blood resulting from respiration.
2. Trace the gastro-pulmonary mucous membrane, and state whether it presents the same features and is subservient to the same offices through its entire extent.
3. State some facts and experiments, in order to prove venous imbibition or absorption.
4. Mention the usual classification of joints, and give an example of each description of articulation.
5. Give an outline of the mode in which the function of respiration is maintained respectively in mammals, birds, reptiles, and fishes.
6. Describe the chief peculiarities of the digestive apparatus in a ruminant animal.
7. Describe the sensible phenomena which attend the action of the heart.
8. Explain the nature of the reflex function performed by the spinal cord and its nerves.
9. Give an explanation of the arterial pulse; mention some observations made with a view to determine its cause; describe the varieties in its condition under different circumstances.
10. State whether the circulation of the blood within the cranium is influenced in any respect by the process of respiration.

21st September, 1855, 9 *o'clock, a.m.*

CHEMISTRY.—*Examiner, John Blyth, M.D.*

1. Oxygen and protoxide of nitrogen are brilliant supporters of combustion; how may they be distinguished from each other?
2. Give the formula and the mode of preparation of the glacial phosphoric acid.
3. How is phosphorus prepared? Show the mode of converting it into the "amorphous" form, and state its properties under the two forms.
4. Explain the process for the extraction of iodine from kelp.
5. Explain by symbols the preparation of carbonic acid; give its properties, specific gravity, and composition by weight.
6. Explain the law of multiple proportions, and illustrate it by examples.
7. Metallic potassium and sodium are freely exposed to the air for some days; state the changes which they undergo, and in what manner the resulting substances are, by simple inspection, distinguished from each other.
8. Give the process for preparing potassa fusa. State how the salts of potash are best detected in solution.
9. What is meant by "combination by volume?" Illustrate by examples.
10. Explain the processes for preparing calomel, both by precipitation and by sublimation; show the mode of detecting the presence of corrosive sublimate in it.
11. What is the nature of an oxysalt? State the rule by which its neutrality is estimated. Give examples by symbols, of neutral salts of protoxides, and sesquioxides.
12. How is the magnetic oxide of iron of the Pharmacopœia prepared? Give its formula, and also that of the resulting compound by the same process, when only one half of the iron has been oxidized.
13. HCy, HCl, NO_5, are in the same solution; how are they detected?
14. Show the mode of analyzing qualitatively, a solution containing the following salts:— Hg_2ONO_5;—$PbONO_5$;—$BaONO_5$;—$KONO_5$. State the special reactions for the detection of the individual substances.
15. Give the two modes of preparing iodide of potassium; explain the reactions in each case.
16. By what simple process would you distinguish a nitrogenous from a non-nitrogenous substance?
17. Show, in symbols, the products of decomposition by fermentation of grape sugar, $(C_{12}H_{14}O_{14})$.
18. What is the specific gravity, and the greatest strength of alcohol prepared by distillation alone from fermented fluids? How is absolute alcohol prepared from this?
19. Give the mode of preparation, the properties, and products of decomposition of absolute hydrocyanic acid.
20. In what manner would you detect diabetic sugar and bile in urine?

21st September, 1855, 2 *o'clock, p.m.*

NATURAL PHILOSOPHY.—*Examiner, G. Johnstone Stoney, A.M.*

1. If one arm of a lever be half-an-inch and the other five inches, and if, to balance the resistance, a force of 5lbs. has to be applied at the end of the long arm, what pressure has the fulcrum to sustain?
2. In what way should you investigate the ratio of the forces which balance on a bent lever?
3. How may an inequality in the arms of the beam of a pair of scales be detected, and its magnitude determined, and in what way can you weigh accurately with such scales?

4 (*a.*) What is the pressure per square inch, at a depth of fifty feet beneath the surface of the sea, if a cubic foot of salt water weigh 64lbs.?

(*b.*) Show why a diver would not be crushed though subjected to this pressure.

5. If $\frac{3}{4}$ of a vessel be immersed when floating on water, and $\frac{1}{2}$ when floating on nitric acid, what is the sp. g. of the latter?

6. Why can a man exist in dry air at a temperature so high that it would cause death if the air were charged with moisture?

7. Explain how the same materials which form warm clothing will serve to keep ice cool.

8. Define evaporation and ebullition, and state how the latter may be made to take place at a temperature lower than the boiling point of the liquid.

9. If the mercury in a barometer stand at 29·8, when, if the vacuum were perfect, it should stand at 30 inches, what is the density of the air above the mercury?

10. What arrangements of a thermometer make it a sensitive instrument, and what make it highly impressible?

11. Describe some experiments which establish a difference between positive and negative electricities.

12. What are the chemical reactions in a voltaic cell of copper and zinc, excited by water acidulated with sulphuric acid?

22nd September, 1855, 9 *o'clock, a.m.*

ZOOLOGY.—*Examiner, Dr. Melville.*

1. Give a sketch of the homology of the exo-skeleton in the *Crustaceæ*.

2. State the mode of circulation in *Fishes*, and point out the manner in which it may be converted into that which exists in *Reptiles*.

3. Give a tabular view of the classification of the animal kingdom, the orders included; and state the diagnostic characters of the sub-kingdoms or types.

4. Mention the characteristics of the different sub-types or classes of *Mollusca*, and give an example of each.

BOTANY.

1. Describe the structure of the vegetable cell; give the chemical composition of its principal constituents, and state the various modes of cell-multiplication.

2. Describe the mode of growth of the stem in *Dicotyledons* and *Monocotyledons;* also contrast the structure and mode of development in the woody bundle in each.

3. Give a sketch of the morphological relations of the different organs of a flowering plant.

4. Give a tabular view of the classes and sub-classes of the vegetable kingdom, according to the natural system, with their diagnostic characters.

5. Refer the plants on the table to their respective *Linnean* classes and orders.

HONOR EXAMINATION IN THE FACULTY OF MEDICINE.

28th September, 1855, 2 *o'clock, p.m.*

MIDWIFERY, AND DISEASES OF WOMEN AND CHILDREN.—*Examiner, Professor Doherty, M.D.*

1. Describe the changes observable in a bird's egg, which is undergoing incubation, from the appearance of the blastoderm to the formation of the amnion.

2. What is the name of the envelope that surrounds the ovum in mammals external to the amnion; where is it probably formed, and what is its analogue in the egg of a bird? What additional use does this membrane serve in the former, beyond its use in the latter?

3. What is the allantois in the chick: trace the vessels it conducts on its surface; what previously existing circulation do they replace?

4. Is the allantoid circulation of importance in the human embryo?

5. Do the vascular systems of the mother and fœtus inosculate in the human species? Prove your opinion.

6. Give some evidence that the fœtus in utero derives nourishment from its mother. What is the peculiar apparatus, described by Goodsir, which exists in the placenta, for the elimination and transmission of nutrient particles, and for the depuration of the fœtal blood?

7. By what experiments has Schwann proved that oxygenation of its blood is essential to the development of the chick:—is the presence of oxygen necessary at all stages of incubation?

8. A case is given by Wagner (Br. and For. Rev. vol. 5), wherein the human fœtus, immediately after birth, was buried under a foot of earth, where it lay for fully a quarter of an hour, and yet, on being exhumed, revived:—many other instances are on record of still-born children, laid aside for dead, having, after a lengthened period, shown unmistakable signs of vitality:—is there any thing in the natural condition of the fœtus, as exemplified by the characters of its blood, which may, to a great extent, account for this tenacity of life?

9. Do children, whose life is all but extinct at birth, present in every case the same appearances? If not, contrast their conditions, and the treatment suitable to each.

10. A woman, within a few weeks of her full term, meets an accident; a rigor ensues, and the stethoscope fails to detect any more the fœtal heart: within what time may we expect the dead fœtus to be thrown off?

11. Is there any exception to this rule; that is to say, may a fœtus perish in utero, without curtailing the duration of pregnancy?

12. A woman in the ninth month of pregnancy is going about performing her household duties; she unexpectedly feels urgent symptoms, as if delivery were imminent, but instead of the child being expelled, she suddenly loses a profuse quantity of blood. Supposing the hæmorrhage to proceed, not from the uterus, but from the vagina, what lesion has occurred, and might such a case become the subject of legal investigation?

13. Might this accident occur during the progress of an otherwise natural labour; if so, at what period of the confinement most probably?

14. Hæmorrhage, from the cause alluded to, may take place without an escape of blood externally. State the progress of a labour so complicated, and the risks, both at the time and subsequently, to which the woman is exposed?

15. In how many ways may the fœtal head present when labour sets in at the full time? Contrast the 1st and 3rd positions as to the relations of the sutures and fontanelles to the pelvis, when the head is entering, and while passing through the cavity of the pelvis: state the direction of the face of the fœtus when expelled, in each, and the situation of the caput succidaneum, if it exist.

16. The practitioner is called to a patient at the full time, the history of whose former labours indicates that the antero-posterior diameter of the brim of the pelvis is defective in its dimensions. He finds the first stage of labour almost completed, and satisfies himself that there is an undue prominence of the sacral promontory, but not to such an extent as to render it impossible for the fœtus to pass: the fœtal heart is heard beating steadily. What modes of delivery have been recommended under such circumstances, and what the arguments used by the advocates of each?

17. In the former series of questions we considered the situation where an encroachment upon the cavity of the pelvis by an organ, not naturally within the pelvis, might occur most readily. Describe now the progress and ultimate position of a descent of the bowel in that direction, and how you would distinguish it from a prolapse of the vagina, from an abscess or an encysted tumour in its wall. If it complicate labour, what management will it require?

18. Describe the origin, progress, and nature of ovarian dropsy, and how distinguishable from ascites.

19. What effects do ovarian tumours of some standing produce on the peritoneum?

20. Multilocular and unilocular cysts (not in their nature malignant) may burst into the peritoneum. Why is it that sometimes a fatal result follows this accident, while at others no bad consequence ensues?

21. A child of four years of age is brought to you affected with dyspnœa. On stripping him you perceive a peculiar conformation of his chest—the sternum prominent, and the sides of the thorax concave outwards. Analyze the symptoms this child presents, more particularly as regards the respiratory movements and cardiac pulsations; and state what line of treatment will be most beneficial.

22 A child is placed under your care, who is stated to have had remittent fever, from which he appeared to be recovering, when he was attacked with occasional pains in the abdomen, and diarrhœa. He is now emaciated, pulse quick, skin dry; he is unable to hold himself upright, and on being placed in the horizontal posture, lies on his back with his knees up. The abdomen is prominent, tender to the touch, and fluctuating. What is the nature of the ailment, the general principles which should regulate the treatment, and the post mortem appearances, if fatal?

23. This disease occurring in a young woman, and progressing stealthily, has been confounded with pregnancy. What are the points of resemblance, what the distinctive marks?

26th September, 1855, 9 *o'clock, a.m.*

NATURAL PHILOSOPHY.—*Examiner, G. Johnstone Stoney, A.M.*

1. An uniform lever, three feet long, and weighing 5 lbs., rests on a fulcrum 6 inches from one end; what weight hung from that end will establish equilibrium.

2. Show that a rough plane may be so inclined that a body set in motion down it will slide without change of speed.

3. (*a.*) What is the principle of work?

(*b.*) Define stable, unstable, and neutral equilibrium, and give examples of each.

4. Prove, from mechanical principles, that when a cylindrical vessel containing water is spun round its vertical axis, the surface of the water will become concave.

5. If a bottle 10 inches high be filled with mercury, and if its neck be closed by a piston, whose end is half a square inch, and which is forced down by a pressure of 50 lbs., to what pressure per square inch will the bottom of the bottle be subjected?

6. Point out why, if there be an enlargement on a blood-vessel, there is more pressure there tending to burst it than elsewhere.

7. Account for the action of the common syphon.

8. Explain how a system of vibrations may constitute a wave, and state the direction of the vibrations which constitute waves of sound in air.

9. By what experiments may the identity of statical and current electricity be established?
10. By what arrangements may magnets be produced by the agency of electricity, and by what may electricity be produced by the agency of magnets?
11. (*a.*) How may it be shown that the eye is incapable of vision at the punctum cœcum?
(*b.*) Account for the illusion in the stereoscope.
12. Account for the formation of an optical image by a convex lens.

26th September, 1855, 2 *o'clock, p.m.*

PRACTICE OF MEDICINE.—*Examiner, Doctor Gordon.*

1. What authors have described the existence of physical phenomena in inflammation of the peritoneum, and what are the observations which have been made?
2. What are the different circumstances under which sanguineous fluid has been found in the cavity of the pleura?
3. In the month of February, a gentleman, after riding home from a dinner party, was seized with vomiting and severe pain beneath the cartilages of the ribs on the left side; he was kept awake all night, sitting up in bed with his body bent forward. When visited next morning he had a very anxious and distressed countenance—constant nausea, with occasional vomiting and singultus; the pain continued, and was increased by inspiration, or motion, or manipulation, while gradual deep pressure did not annoy him; he had considerable symptomatic fever; he still preserved the same posture; the abdomen was strongly retracted, and there were no auscultatory phenomena in the thorax except that the respiration in the left lung was rather feeble. The disease not being recognised progressed. State—
(*a.*) Your diagnosis in the above case.
(*b.*) What were the probable phenomena which subsequently *proved* its nature; and
(*c.*) The line of treatment you would adopt.
4. What is the pathology of cyanosis?

27th September, 1855, 9 *o'clock, a.m.*

CHEMISTRY.—*Examiner, John Blyth, M.D.*

1. What is the law of the diffusion of gases? Point out the distinction between real diffusion and the passage of gases through moist membranes. Explain in what manner, in respiration, the feeble diffusive power of carbonic acid into atmospheric air is apparently increased.
2. Explain in symbols the products which are obtained by heating ferrocyanide of potassium with dilute and with concentrated sulphuric acid.
3. Explain the reactions which take place at the commencement, and towards the end of the process for preparing nitric acid, when one equivalent of KO NO_5 is heated in a retort with one and with two equivalents of HO, SO_3, respectively.
4. How much of the first hydrate of nitric acid should be obtained, according to theory, from one pound of nitrate of potash, and how much sulphuric acid of sp. gr. 1·85 is necessary for complete decomposition of the salt, the residue in the retort being bisulphate of potash?

N.B.—N = 14 : — S = 16 : — O = 8 : — K = 39.

5. Explain the difference between constitutional water, and water of crystallization.
6. Give examples of real acid salts, and show how such acid salts as bisulphate of potash are really neutral compounds.
7. What is the nature of a basic salt? In what manner has it been shown that many basic salts can be regarded as neutral? Exemplify this in the case of basic nitrate of copper (4 CuO, NO_5 + 3 HO.)
8. How is tartar emetic prepared? What are its properties and reactions with acids, alkalies, and HS: give its formula, as well as that of the salt of antimony, which remains in solution in the mother liquor, and state the nature of both, whether neutral, acid, or basic.
9. Give the formulæ of the different alums. To what system do the crystals belong; and in virtue of what law do the different oxides replace each other?
10. Explain the phenomena of Endosmosis and Exosmosis, according to Dutrochet.
11. State some of the eudiometric modes of determining the amount of oxygen in atmospheric air. Show why the results obtained by employing NO_2, are incorrect.
12. Explain the distinction between eremacausis and putrefaction, as defined by Liebig; illustrate by examples.
13. What is meant by the terms oxydising and de-oxydising agents? Arrange under these heads: HS; SO_2; Cl; Cl O; nascent H; NO_5; Fe OSO_3; Sn Cl. Show, in symbols, the action of Sn Cl on corrosive sublimate; of HS on per-sulphate of iron; of Fe OSO_3 on nitrate of silver; of SO_2 on bichloride of platinum; and of Cl on sulphate of manganese.
14. Explain the Binary theory of salts.
15. What is the nature of Collodion employed in surgery? Give the chemical name, mode of preparation, and properties of the substance before solution.

16. What is the nature of a compound radical in organic chemistry? Give examples of salogen and basyl compound radicals.

17. Describe the process of fermentation by which Lactic and Butyric acids are formed.

18. Explain, according to the views of Liebig and of Mulder, the manner in which oxygen is conveyed from the lungs throughout the circulation.

27th September, 1855, 2 *o'clock, p.m.*

SURGERY.—*Examiner, Christopher Fleming, M.D., F.R.C.S.I., M.R.I.A.*

1. What are the essential differences in the symptoms, the progress, and the treatment of Phlegmonous and of Erysipelatous inflammations?

2. Specify those cases of burns and scalds in which the prognosis is most unfavourable; mention the probable causes of death in such, and the periods at which it may occur.

3. Whether was the carotid artery first tied in a case of injury or of disease? If in a case of the latter, name the disease, the surgeon who operated, and give the result of his operation.

4. Where is the common carotid artery tied with most facility? Describe the several stages of the operation, and name the ordinary period at which the ligature separates.

5. In what situations may the bladder be punctured? State the cases in which the operation is called for; mention the requisite appliances for such; and give the special operations in detail.

28th September, 1855, 9 *o'clock, a.m.*

BOTANY.—*Examiner, Dr. Melville.*

1. State the arguments for and against the axial theory of placentation.

2. Describe the phenomena exhibited in the germination and development of ferns.

3. Describe the plants placed on the table, using the appropriate technical terms as to form, relative position, colour, &c.

4. Give the characters of the natural orders:—*Liliaceæ*, *Euphorbiaceæ*, *Solanaceæ*; and mention the principal medicinal products derived from each.

ZOOLOGY.

1. Define the class *Entozoa*; state the diagnostic characters of the groups into which it is usually divided, and mention the leading phenomena connected with their mode of generation and development.

2. Point out the anatomical and physiological characters which separate the *Amphibia* from the *Reptilia*; and give tabular views of the orders in each, with their leading characteristics.

3. Give a sketch of the homology of the vertebrate skeleton, and point out the principle which determines the number of vertebral segments in the cranium.

4. Enumerate the families of the *Quadrumana*; and mention their principal peculiarities as to organization and mode of life.

22nd September, 1855, 2 *o'clock, p.m.*

MIDWIFERY, AND DISEASES OF WOMEN AND CHILDREN.

Examiner, Professor Doherty, M.D.

1. When the uterus in the human subject is *in situ*, and unimpregnated, what is the relative position of the fallopian tube, the proper ligament of the ovary, and the round ligament at their insertion into the uterus?

2. To what extent is the uterus connected to the bladder before, and the rectum behind: is it possible for any other organ to interpose; if so, in which of these situations is the displacement more likely to occur?

3. What preparation does the uterus make for the reception of the impregnated ovum; what was the opinion formerly entertained respecting the formation of the decidua vera and reflexa; what the modern doctrine?

4. What portion of the womb retains longest, after conception, its original dimensions? Does the late expansion of the part alluded to explain why loss of blood from a certain species of malposition of the uterine contents occurs only towards the close of gestation?

5. A woman in the third month of pregnancy has had hæmorrhage for some hours, accompanied occasionally by pain in the hypogastric region; on examination, the cervix uteri is found to have become altered, so that the vaginal portion of the uterus has assumed an oviform shape:—what prognosis will you make, and why?

6. If you wish to promote the expulsion of the ovum in such a case, what means will you employ? How is it that ergot, given for the purpose, may produce an opposite effect? How would you remedy this untoward operation of the drug?

7. Give a detailed account of the duties of the accoucheur in a perfectly natural case of labour?

8. A woman, near the termination of gestation, is going up stairs; without any previous warning, the liquor amnii gushes away:—within what time will labour most probably set in?

9. May this premature discharge of the waters prove prejudicial during the progress of the labour?

10. Under what circumstances is it right to rupture the membranes artificially?

11. What would lead you, at an early stage of labour, at the full time, to doubt that the fœtal head presented:—can the stethoscope give assistance in determining the point:—at what stage can the nature of the presentation be determined; and what rule, derived from this fact, should be observed in the management of every case?

12. State the distinguishing marks, firstly, of a breech, and secondly, of a foot, presentation. At what stage of the labour in such cases should artificial aid begin? Describe the manipulation to be adopted, and state the dangers to which the fœtus is inevitably exposed, and the injuries that may be inflicted on it, during the delivery, by an incompetent accoucheur.

13. How soon after childbirth does the secretion of milk usually set in: what symptoms accompany it. May a mistake be made regarding the condition of the uterus at that period?

14. What is the rule of practice, as to the time when the infant should be applied to the breast: what ill consequences arise from a premature application, what from too much delay?

15. Describe, anatomically, the milk ducts in the human mamma. Is there any thing observable in the position of the nipple which may be regarded as a special provision, having reference to the natural attitude of the nursing mother?

16. If it be desirable to put back the milk, what means would you employ? Explain particularly the mode of applying a compressing bandage to both breasts.

17. When an infant sucks, what causes the milk to flow into its mouth: why does coryza greatly incommode it during the operation?

18. What peculiar apparatus, for the ejection of the milk, is attached to the mammary gland in the marsupialia: why is such a provision necessary?

19. What is the correlative peculiarity in the fauces of the young kangaroo during lactation?

20. Is there any group of animals in which a very similar arrangement of the fauces prevails permanently to subserve the conditions of their existence?

21. To what derangements is an infant liable who is nursed with unwholesome milk? Is there any peculiarity (that the microscope reveals) which, properly belonging to the colostrum, may prove pernicious to the child, if persistent beyond its usual duration: within what time, according to Donnè, should this peculiarity disappear?

22. Why are convulsive affections so much more common in early life than subsequently?

23. Describe a case of meningitis of the spinal cord. Under what circumstances has it prevailed endemically in Ireland?

29th September, 1855, 9 *o'clock, a.m.*

MODERN LANGUAGES.—*Examiner, Professor Frings, PH.D.*

GERMAN.—I.

A.

1. Woher ſtammt das Wort "Deutſch?"

2. Woher erklärt ſich die Verwandtſchaft zwiſchen der deutſchen und engliſchen Sprachen?

3. Woraus ſchließen die Philologen, daß die Teutonen öſtlichen Urſprungs ſind?

4. Wodurch unterſcheidet ſich die deutſche Sprache beſonders von den andern neuern Sprachen?

5. Wer gab den Deutſchen den Namen "Germanen?"

6. Welchen Urſachen ſchreibt man den hohen Standpunkt der deutſchen Proſa im 16ten Jahrhundert zu?

7. Welchen Zeitraum umfaßt die Bildungsgeſchichte der deutſchen Sprache von ihren erſten Anfängen bis zu ihrem gegenwärtigen Standpunkte?

8. Hat die deutſche Sprache irgend eine, auch noch ſo entfernte, Verbindung mit irgend einer andern Sprache, und mit welcher?

B.

1. Nenne die deutſchen Zeitwörter, die im zweiten Particip die Form des Infinitifs beibehalten, und unter welchen Umſtänden.

2. Unterſcheide zwiſchen "Man tanzte über mich," und "Man tanzte über mir."

3. Was für einen Einfluß hat das Bindewort auf die Bildung eines Satzes? Giebt es Ausnahmen und welche?

4. Wann wird im Deutſchen ſſ gebraucht, und wann ß, und wie unterſcheiden ſie ſich in der Ausſprache?

5. Was bedeutet "Überſetzen" mit dem Nachdruck auf der erſten Silbe, und was, mit dem Nachdruck auf der dritten?

6. Unter welchen Umſtänden wird das Vorwort von dem Zeitworte abgeſchnitten und ans Ende des Satzes gebracht?

7. Unterſcheide zwiſchen "Es iſt" und "Es giebt," und erwähne die andern etwaigen Eigenthümlichkeiten, die dabei obwalten.

8. Welche Zeitwörter erfordern im Deutſchen den darauf folgenden Infinitif ohne das Vorwort zu?

II.

Translate into German:—

To say the truth, eating seems to make a grand ingredient in all English parties of zeal, business, or amusement. When a church is to be built, or an hospital endowed, the directors assemble, and instead of consulting upon it, they eat upon it; by which means the business goes forward with success. When the poor are to be relieved, the officers appointed

to dole out public charity assemble and eat upon it. Nor has it ever been known that they filled the bellies of the poor, till they had previously satisfied their own. And yet I could forgive this people their plentiful meals on such occasions, as it is extremely natural for every man to eat a great deal when he gets it for nothing: but what amazes me is, that all this good living no way contributes to improve their good humour. On the contrary, they seem to lose their temper as they lose their appetites; every morsel they swallow, and every glass they pour down, serves to increase their animosity.

GOLDSMITH.

FRENCH.—I.

A.

1. Que veulent dire les expressions "*Langue d' Oc* et *Langue d' Oil?*" Lequel de ces deux dialectes est devenu la langue française d' à-présent, et quelle est la différence de ces deux dialectes?
2. Quelle est l'origine de la langue française?
3. Comment les terminaisons latines: *atio, io, or, tas* sont-elles généralement rendues en français?
4. Qui est-ce qui a porté la langue française à sa perfection?
5. A qui les Français attribuent-ils le mérite d'avoir perfectionné l'art d'écrire en vers?
6. Nommez les langues qui ont contribué plus ou moins à enrichir la langue française.
7. Quelles sont les causes principales qui ont contribué à rendre la langue française universelle?
8. Est-ce que l'orthographe française d'à-présent diffère de celle du siècle de Louis XIV., et en quoi?

B.

1. Quelle est la différence entre *Savoir* et *Connaître*?
2. Dans quels cas les Français se servent-ils de l' adjectif au lieu de l' adverbe?
3. Est-ce que la phrase suivante est correcte? Si non, corrigez s'il vous plaît:—
"Mes soeurs s'étaient proposées de passer trois mois à la campagne, mais des accidents imprévus les en ont empêchés."
4. Mentionnez toutes les règles que vous savez sur l'emploi du subjonctif en français.
5. Est-il correct de dire, "Je couperai vos oreilles?" Si non, corrigez et donnez la règle.
6. Quand le Participe présent est-il variable et quand ne l'est-il pas? Donnez des exemples.
7. Montrez en quoi l'usage des nombres cardinaux diffère en français de celui qu' on en fait en anglais.
8. Est-ce que la prose française admet des inversions, et lesquelles?

II.

Translate into French:—

France and England may each of them have some reason to dread the increase of the naval and military power of the other; but for either of them to envy the internal happiness and prosperity of the other, the cultivation of its lands, the advancement of its manufactures, the increase of its commerce, the security and number of its ports and harbours, its proficiency in all the liberal arts and sciences, is surely beneath the dignity of two such great nations. These are the real improvements of the world we live in. Mankind are benefited, human nature is ennobled by them. In such improvements each ought, not only to endeavour itself to excel, but, from the love of mankind, to promote, instead of obstructing the excellence of its neighbours. These are all proper objects of national emulation, not of national prejudice or envy.

SMITH—*National Prejudice.*

ITALIAN.—I.

1. La Lingua Italiana, quella cioè che coltivano i letterati, no si usò e non fu ben sistemata prima del che secolo?
2. Perchè la lingua dei Troubadori era detta romanza?
3. Quali fra i restauratori benemeriti della Lingua Italiana, che scrissero poco innanzi del *Dante* sono digni di menzione?
4. Qual è l'opera di Boccaccio la più pregiata, e a cui deve singolarmente la celebrità del suo nome?
5. Menzionate gli uomini grandi per quanti possete ricordarvi nello secolo diciottesimo.
6. Citate i più celebri italiani Scrittori drammatici.
7. Che sono i più celebri Epici italiani? Citate i loro poetici componimenti i più considerabili.
8. Che secolo vide nascere Lodovico Ariosto?
9. In vista di qual opera le più colte Nazioni d'unanimi consenso danno all' Ariosto il titolo di divino?
10. Perchè nel secolo diciasettesimo si vide languir di nuovo il buon gusto della italiana letteratura?
11. Come si forma il plurale dei sostantivi italiani?

12. Come, in italiano, si esprimano la comparazione di uguaglianza, e come, se voglia annunziare superiorità?

13. Che secolo era detto "*Il Secolo d'oro*" della italiana letteratura, e perchè?

14. Quando il participio passato in italiano si regola col suo nominativo, e quando colla sua concordanza?

II.

Translate into Italian:—

When I was a child of seven years of age, my friends, on a holiday, filled my pockets with coppers. I went directly to a shop where they sold toys for children; and, being charmed with the sound of a whistle that I saw on the way in the hands of another boy, I voluntarily offered him all my money for one. I then came home, and went whistling all over the house, much pleased with my whistle, but disturbing all the family. My brothers, and sisters, and cousins, understanding the bargain I had made, told me I had given four times as much for it as it was worth. This put me in mind what good things I might have bought with the rest of the money; and they laughed at me so much for my folly, that I cried with vexation, and the reflection gave me more chagrin than the whistle gave me pleasure.

FRANKLIN.

29th September, 1855, 2 *o'clock, p.m.*

MATERIA MEDICA AND PHARMACY.—*Examiner, Dr. William Barker.*

1. How is a standard of weights and measures obtained?

2. What are the impurities most frequently found in sulphuric acid, and how may they be separated?

3. Describe the modes of obtaining hydrocyanic acid, write in symbols the changes that take place in the processes, and describe the means of ascertaining its strength and purity.

4. How is the hydrosulphuret of ammonia prepared? what are the tests of its purity, and its uses in medicine?

5. What is the composition of the ordinary Ferri Carbonas?

6. What are the most common adulterations of commercial magnesia and its salts, and how are they detected?

7. Enumerate the principal preparations of opium used in medicine, and the proportions of opium in each.

8. How do we ascertain the strength and purity of acetic acid?

9. How do we ascertain the purity of elaterium?

10. Describe the process for obtaining absolute alcohol, and the changes which take place during its conversion into acetic acid.

11. State the principal pharmaceutic substances containing tannic acid, and describe the process for obtaining it in a pure state.

29th September, 1855, 2 *o'clock, p.m.*

MATERIA MEDICA, PHARMACY, AND MEDICAL JURISPRUDENCE.

Examiner, Dr. William Barker.

1. In what cases do we employ the specific gravity of substances as a means of ascertaining their strength or purity?

2. Why cannot the specific gravity of mixtures of fluids of known specific gravity be ascertained by calculation?

3. Describe the processes for obtaining potash, and the tests for its absolute purity.

4. What are the principal uses of sulphurous acid, and what are its effects on organic life?

5. What is the mode of obtaining ether, and what are the theories of its formation.

6. In a case of suspected poisoning by opium, what means would you adopt to test its presence?

7. Describe symptoms of poisoning by strychnia.

8. How can strychnia be detected in mixed fluids?

9. What is supposed to be the source of poison in diseased animal food?

10. Mention some of the principal gaseous poisons and their antidotes.

11. What circumstances would lead you to suspect infanticide in a case of sudden death of a child?

12. State the different modes in which lead may act as a poison.

13. Describe symptoms of poisoning by belladonna.

1*st October*, 1855, 9 *o'clock, a.m.*

ANATOMY AND PHYSIOLOGY.—*Examiner, J. H. Corbett, M.D.*

1. How do you prove the circulation of the blood?

2. Describe the mechanism of respiration. Mention the muscles and nerves which are engaged in that function.

3. Mention the constituents of the blood, and describe the red corpuscles.

4. Describe the origin and course of the phrenic nerve.

5. Offer proofs to show that the sense of smell resides in the olfactory nerves and lobes.

6. Describe the umbilical vein and hypogastric arteries of the fœtus.

7. Describe the structure of the veins. Mention the general plan on which the venous system is constructed; state the forces which promote the circulation of blood through the veins.

8. Give an outline of the function of chylification, and describe the structural anatomy of the small intestines.

9. What are the circumstances which influence the exact amount of carbonic acid exhaled by a man within a given period of time.

10. Describe the inferior laryngeal nerves. Mention some experiments made on animals in order to determine their function.

1*st October*, 1855, 9 *o'clock, a.m.*

ANATOMY AND PHYSIOLOGY.—*Examiner, J. H. Corbett, M.D.*

1. Describe the several constituents of the skin, and state the function of each.

2. Describe the recti postici and obliqui capitis muscles, and mention the parts which can be seen on dissecting into the space included between them.

3. Describe the kidneys during fœtal existence, and state whether there is any analogous condition as a permanent arrangement in some animals.

4. What explanation would you afford as to the cause of the first inspiration at birth.

5. Describe the spinal membranes and the ligamentum denticulatum. State the office of each, and contrast all with the membranes of the brain.

6. Describe the structural anatomy of the lobules of the liver.

7. Describe the nature of the respiratory process, according to the views of La Grange.

8. Mention the origin, course, relations, and distribution of the spinal accessory nerve.

9. State the function of the glosso-pharyngeal nerve, and describe its origin, course, and mode of distribution.

10. Trace the genito-urinary mucous membrane through its various inflections in the male subject.

11. State the composition and use of the bile.

12. Describe the origin, course, relations, and branches of the vertebral artery.

1*st October*, 1855, 2 *o'clock, p.m.*

ANATOMY.—*Examiner, J. H. Corbett, M.D.*

1. Describe the pharynx, its muscles, vessels, and nerves, and the passages which communicate with it.

2. Describe the articular surfaces of the first and second cervical vertebræ, and the ligaments connected with these bones.

3. Describe the origin, course, and surgical anatomy of the internal epigastric artery.

4. Mention the several parts passing through the upper orifice of the thorax, and their relative positions.

5. Describe the prostate gland, its relation to the neighbouring parts, and the objects observable on opening into the prostatic portion of the urethra.

6. Describe the origin, course, and branches of the ophthalmic artery, and draw a distinction between the different sets of ciliary arteries.

7. Give a description of the position, form, and connexions of the optic thalami.

8. Describe the ligaments and articular surfaces of the bones forming the ankle joint, and state the exact position of the tendons, vessels, and nerves in relation with it.

9. Describe the internal and external plantar arteries.

10. Describe the chordæ vocales and arytenoid cartilages.

11. Describe the membrana nictitans of the bird.

12. Describe the anatomical characters peculiar to the eye of a fish.

1*st October*, 1855, 2 *o'clock, p.m.*

ANATOMY.—*Examiner, J. H. Corbett, M.D.*

1. Describe the ligaments which connect the bones of the vertebral column.

2. Describe the femoral artery in Scarpa's space.

3. Describe the articular surfaces, the ligaments, and synovial apparatus of the temporo-maxillary articulation.

4. Describe the pterygoid muscles and their actions.

5. Describe the origin, course, relations, and branches of the internal maxillary artery.

6. Describe the sub-maxillary gland, and the course of its duct.

7. What are the irregularities with respect to origin of the obturator artery; in case of crural hernia does it always occupy the same position in relation to the neck of the sac?

8. Describe the popliteal region. State the relations of the popliteal artery, and mention its branches.

EXAMINATION FOR THE DEGREE OF LL.B.

26th September, 1855, 9 *o'clock, a.m.*

LAW OF PROPERTY AND PRINCIPLES OF CONVEYANCING.

Examiner, Professor Barry.

1. In the following instances of variance between the *premises* and the habendum of a conveyance, state the result with reasons:—

Premises.	Habendum.
To A.	To A and his heirs.
To A for life. . . .	To A and his heirs.
To A for 21 years. . . .	To A and his heirs.
To A.	To A from the death of B.
To A for life. . . .	To A from the death of B.
To A and his heirs. . .	To A for life.
To A and his heirs. . .	To A and the heirs of his body.
To A and the heirs of his body.	To A and his heirs.

2. Give an outline of a mortgage in fee, the property being house property, and the security intended to be as full as possible.

3. State the principal effect and operation of the Act for the Registration of Deeds. What are the requisites of a valid registration?

4. Define privity of estate, and state under what circumstances it is material.

5. Determine the cases in which a purchaser is bound to see to the application of the purchase money.

6. In what cases is the vendor of a lease *not* bound to produce his lessor's title?

7. What conveyances are fraudulent as against subsequent purchasers?—as against creditors?

8. State the legal interest of a husband in his wife's real property in possession, and his legal interest in his wife's personal property in possession, and refer the difference between these interests to some general rules of law.

9. Define a power under the statute of uses. Define an equitable power, and state the principal distinctions between them as to creation, determination, &c.

10. State the difference between legal and equitable objections to title, and refer to instances showing that equitable objections are considered by courts of law.

11. Devise to A and the heirs of his body, and in default of such issue to B and the heirs of his body, and in default of such issue to C in fee. A suffered a recovery with single voucher, and executed a deed declaring the use to himself in fee, and sold. Is the title good?

12. Devise to A and his heirs in trust to sell and pay debts. A dies before the trusts are executed, having devised all his trust estate to B and his heirs on the existing trusts. Can B make a title to a purchaser of the trust estate?

26th September, 1855, 9 *o'clock, a.m.*

JURISPRUDENCE.—*Examiner, T. E. Cliffe Leslie, LL.B.*

I.—ANALYTICAL JURISPRUDENCE.

1. (*a.*) Why are the sanctions of human laws, according to Blackstone, for the most part vindicatory rather than remuneratory?

(*b.*) Do you consider the sanctions of civil, as opposed to criminal law, vindicatory?

2. What provision, if any, should be made by the laws, in order to secure national subsistence and abundance?

3. "Nor are the expectations of probable heirs less real possessions, which it is a hardship to defeat" (*Hallam*). "The right of inheritance is not an absolute real right; but this right to acquire may so far be correctly called real" . . . (*Reddie*). Explain the sense in which the term *real* is used in each of the above passages, and the extent to which Dr. Reddie admits the propriety of terming the right of inheritance a real right.

4. How does Savigny classify the rights comprehended in the private law of a state?

5. What are the chief advantages and disadvantages of trial by jury?

6. What are the chief advantages and disadvantages of having a plurality of judges in each of the superior courts of law?

II.—HISTORICAL JURISPRUDENCE.

1. To what institution does Hallam attribute the uniformity of the Common Law of England, and when was that institution established?

2. What causes principally contributed to a great improvement in the English legal system, in the period inclusive of the reigns of Henry II. and Edward I.?

3. Is the title of "the English Justinian" properly applicable to Edward I. in reference to his legislative improvements?

4. "This enactment (*Poyning's law*) has made an epoch in Irish Jurisprudence: the law of the two countries has begun to diverge from that time" (*Hallam*). Explain this.

5. "Both the intention and effect of the statute of fines seem not to have been justly apprehended. . . . . The liberty of alienation was neither necessary nor intended to be given by it" (*Hallam*). "With respect to lands granted to a man and the *heirs of his body*, the power of the ancestor is not now so complete as in the time of Henry III." (*Williams on the law of real property*). Explain the foregoing passages, stating the principal changes which the law has undergone with respect to the right of alienating entailed lands, from the reign of Henry III. to that of William IV.

6. Give a short statement of the causes which led to the establishment of separate systems of law and equity in England, and show the tendency of modern legislation to assimilate their functions.

26th September, 1855, 2 *o'clock, p.m.*

EQUITY.—*Examiner, Professor Barry.*

1. State the Common Law as distinguished from the equitable jurisdiction of the Lord Chancellor, and describe his delegated jurisdiction.

2. From what source does the jurisdiction of the Court of Chancery over infants proceed? From what time, in history, has this Court taken upon itself to act on and in behalf of infants, as Guardians?

3. Explain the doctrine of conversion. What circumstances are to be considered in determining whether a conversion is intended to be partial, notwithstanding general directions to convert the whole fund?

4. Distinguish the cases in which the heir, upon whom a mortgaged estate descends, can claim to have the estate exonerated by the personalty, from the cases in which he is bound to take "*cum onere*."

5. Describe a constructive trust, and give an instance.

6. Why are not trustees of an equity necessary parties to a suit relating to the trust property?

7. Point out the difference between the powers of co-trustees and co-executors.

8. Can a trustee purchase from the cestui que trust?

9. In what cases will the Court of Chancery execute gifts *cy-pres?*

COMMON LAW AND CRIMINAL LAW.—*Examiner, Professor Barry.*

1. What is the use and intention of the statutes of limitation? To what class of actions was the doctrine of limitation first applied? And explain this doctrine as originally established.

2. By what statute is the law as to the limitation of the Crown in suits relating to land now governed?

3. What is the practical distinction between a sum of money, agreed to be paid on breach of an agreement, being considered as *the liquidated amount of the damage sustained*, and its being treated as a *penalty;* and on what considerations does it depend whether a given sum, in any particular case, falls under one predicament or the other?

4. Give an example illustrative of the distinction referred to in the preceding question?

5. When will an untrue representation, unaccompanied by fraud, vitiate a policy of insurance?

6. What is the usual form of a charter-party, and what engagements are usually entered into on either side?

7. What is maintenance? and distinguish it from champerty.

8. How may the offence of *conspiracy* be described? Is it an offence for workmen to combine together to raise wages?

9. What is a presentment, in its general and proper sense?

10. Give the effect of 14 & 15 Vict., c. 100, s. 4, in reference to the mode of stating, in an indictment for murder, the manner and means of death.

11. What is the respective effect of a judgment on demurrer in favour of, and of one against, a prisoner?

12. What rule formerly existed as to the production of evidence *for* the prisoner? and when was it altered?

13. Give the effect of 14 & 15 Vict., c. 100, s. 9, in reference to the case of a prisoner not completing the offence with which he was charged.

14. May a prisoner, indicted for manslaughter, be acquitted of the manslaughter and found guilty, on the same indictment, of a common assault?

CIVIL LAW.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. Explain the following phrases—*jus honorarium, jus civile, jus italicum.*

2. In what sense has the Roman law been styled by publicists the *common law?*

3 *a.* What were the functions of the Roman *feciales* and *recuperatores* respectively?

b. Those functions exhibit a recognition of the distinction between public and private international law?

4. Several instances of codification occur in the history of the Roman law?

5. Trace the principal epochs in the history of the Roman law in Europe after the time of Justinian.

6. Give a sketch of the history of the civil law in England.
7. What are the principal modes of acquiring property according to the *jus gentium*?
8. Should an island rise in the sea, and another in a river, who would be entitled to the proprietorship of the new land in each case, according to the civil law?
9. Explain the terms *usucapio, cessio bonorum, collatio bonorum,* pointing out analogies and differences in English law.
10 *a*. To what principle is the right of capturing the property of a hostile state referred in the civil law?
b. Is the application of the principle, in its full extent, to such property sanctioned by international law?
11. Explain the origin and application of the term *postliminium.*
12. "Although they appear to have been ignorant of the practical utility of marine insurance, the Romans were familiarly acquainted with the contracts of bottomry and respondentia. . . . In Great Britain, while the business of insurance is carried on to a greater extent than ever, the contracts of bottomry and respondentia are now seldom resorted to," (*Reddie on the Law of Maritime Commerce*). Can you explain, to any extent, the facts noticed by Mr. Reddie, by reference to the laws relative to usury?

27th September, 1855, 9 *o'clock, a.m.*

PLEADING, PRACTICE, AND EVIDENCE.—*Examiner, Professor Barry.*

1. What is the difference between a plea in justification and a plea in discharge?
2. Describe the plea of "*son assault demesne,*" and state what kind of plea it is technically.
3. What is "*a departure*" in pleading?
4. How is an issue in law raised, and how tried?
5. What is trial "*by the record?*" and how does it take place?
6. What is trial by "*proviso?*"
7. What is the meaning of praying a "*tales de circumstantibus?*"
8. How are witnesses compelled to appear and give evidence? and what is the object of a direction called "*duces tecum,*" and in what is it usually inserted?
9. State some of the things, of the existence and truth of which judicial notice must be taken without other evidence.
10. What is the general nature of presumptions of law? What are conclusive presumptions? Give some instances where presumptions are not so, and may be rebutted.
11. If a landlord, in proving his own title, disclose the fact, that he has but an equitable estate, may the defendant, his tenant, take advantage of such failure of title in his landlord? Mention some instances in which a tenant may set up want of title in his landlord.
12. What is meant by the term "the best evidence?" In its absence, what is requisite before secondary evidence can be received? What are the degrees of secondary evidence?
13. Upon what principle is it that "dying declarations" are admissible in evidence? and what circumstances are requisite to be proved before they can be admitted?
14. If the oral testimony of a witness, who cannot be produced, is sought to be put in evidence, what facts must be proved previously to its admission?
15. Who determines the question whether a matter is admissible in evidence or not?

CONSTITUTIONAL LAW.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. How would you classify the subjects comprehended under the head of Constitutional Law?
2. What meaning do you attach to the phrases *public rights, political rights, civil rights?*
3. "Parliament has two functions, the legislative and executive," (*Economist*, 25th August, 1855). Has Parliament executive functions?—and if so, what are they?
4. "In our country the Ministry have long been vulgarly termed the Government, although they have no constitutional existence," (*Guesses at Truth*, 4th ed. p. 330). If it is true that the Ministry have no constitutional existence, how have their functions been created? If it is untrue, prove it to be so.
5. "This is the last statute that has been found necessary to restrain the Crown from arbitrary taxation, and may be deemed the complement of those numerous provisions which the virtue of ancient times had extorted from the first and third Edwards."—(*Constitutional History*, chap. ix.)
(*a*) What statute is referred to, and when enacted?
(*b*) Describe briefly the chief provisions made respecting arbitrary taxation in the reigns of the Edwards.
6. State the provisions of the Habeas Corpus Act, 31 Car. ii., c. 2, and of the supplementary act passed in the 56th of Geo. III.
7. Describe the changes which have taken place in the political relations of Ireland and Scotland to England, with dates.
8. How do you define the distinction between absolute and limited monarchy?
9. Hallam observes that there is one most prominent and characteristic distinction between the constitution of England and that of every other country in Europe.

27th September, 1855, 9 *o'clock, a.m.*

COLONIAL LAW.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. Describe the composition of the government of India.
2. Describe the judicial institutions of India, pointing out what you consider their principal defects.
3. Describe the constitutions of the colonies of Australia, New Zealand, and Canada.
4. Do the Ionian Islands form a dependency of Great Britain or not, in your opinion; and why?
5. State the different modes of acquiring a dependency, with examples; and point out the different effects of each mode of acquisition upon the law of the dependency.
6. "There is no system of *personal law* in the dependencies of England, such as existed in Western Europe soon after the conquests of the German barbarians, and as now exists in Hindostan," (*Lewis on the Government of Dependencies*); what is meant by the existence of a system of personal law in Hindostan?

27th September, 1855, 2 *o'clock, p.m.*

INTERNATIONAL LAW.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. On what grounds does Hallam question the validity of the argument, that Mary Queen of Scots *as an independent Sovereign* was not amenable to any English jurisdiction?
2. "One of his captains cruising in pursuit of five Spanish galleys, and finding them take refuge in the little French port of St. Tropez, was not withheld by the peace which still subsisted with France, but entered the harbour after them, and by the aid of a fireship reduced them to ashes," (*Mahon's History of England*, chap. xxiv.); was this a violation of International Law?
3. State the meaning you attach to the phrase "balance of power in Europe;" and on what occasions forcible intervention for its maintenance is, in your opinion, legitimate.
4. Give a short account, with dates, of the principal treaties relating to the "balance of power."
5. State the principles of International Law relative to the effect of a war between two States upon public compacts between them, and upon private contracts between their inhabitants.
6. What changes has the present war produced in the practice of maritime hostilities by France and England, respectively?
7. Describe the principal changes in the mode in which International Law has been cultivated during the following periods:—
   (*a.*) From the age of Grotius to that of Pufendorf.
   (*b.*) From the age of Pufendorf to that of Wolf and Moser.
   (*c.*) From the age of Wolf and Moser to that of Von Ompteda and Von Martens.
8. Are there any circumstances which tend to account for the diligence and success with which the branch of International Jurisprudence relative to the conflict of laws has been cultivated in America?
9. "The civilians have divided municipal laws into two classes, which they call respectively *real statutes and personal statutes*. On this distinction depends the question, whether the *law of the domicil*, or *lex fori*, or *lex rei sitæ*, is to have the preference in cases of conflict," (*Commentaries on Universal Public Law*). Explain the phrases in Italics.
10. "Suppose a contract is made in England between two Englishmen for the sale of lands situate in Jamaica, and the vendee agrees to give £20,000 for the land, without specifying the currency: £28,000 Jamaica currency would constitute £20,000 English." (*Story's Conflict of Laws*, chap. viii.) According to the currency of which country should the purchase money be paid?
11. Explain and exemplify the rule *extra territorium jus dicenti impune non paretur*.
12. "The maritime law is not the law of a particular country, but the general law of nations," (*Lord Mansfield*). Explain this.

EXAMINATION FOR DIPLOMA IN AGRICULTURE.

18th September, 1855, 9 *o'clock, a.m.*

THEORY OF AGRICULTURE.—*Examiner, Professor Hodges, M.D., F.C.S.*

1. State the average per centage composition, respectively, of the ash of wheat and oats.
2. Mention the amount of nitrogenized (flesh forming) substances respectively contained in 100 parts of the seeds of the following crops dried at 212°:—wheat, oats, beans, Indian corn.
3. What is the usual composition of genuine peruvian guano, and the commercial value of the fertilizing matters contained in an average sample.
4. Give an account of the statements of Messrs. Lawes and Gilbert, respecting the influence of manures on the growth of wheat and turnips, and of the objections to their opinions, derived from the investigations of Baron von Liebig.

5. What is the explanation of the advantages of fallow?
6. Mention the effects produced by the presence of an excess of water in the soil, and he benefits derived from its removal.
7. Describe the various methods adopted in the preparation of bones for manure, and explain the chemical changes produced in the manufacture of vitriolized bones.
8. What amount of soluble bi-phosphate of lime and of nitrogen should a sample of super-phosphate, stated to have been prepared from bones, yield on analysis?

18th September, 1855, 2 *o'clock, p.m.*

PRACTICE OF AGRICULTURE.—*Examiner, Professor Hodges, M.D., F.C.S.*

1. Take the plan of the farm submitted, and mark upon it the proper direction in which drains should run, and the situations in which you consider the sub-mains and mains should be placed.
2. State the operations required to prepare the soil for the flax crop, and the method of managing the crop.
3. What quantities of seed per acre are required to sow the following crops broad-cast—flax, wheat, oats, barley?
4. Describe the peculiarities and mode of action of the reaping machines of Hussey and M'Cormick.
5. Give an account of the arrangements and machinery required for the distribution of liquid manure, by steam power, as adopted in Ayrshire, and on the farm of the Commissioners of Education, at Glasnevin.
6. State the plans to be adopted for the preservation of farm-yard manure.

19th September, 1855, 9 *o'clock, a.m.*

HISTORY AND DISEASES OF FARM ANIMALS.—*Examiner, Professor Hodges, M.D., F.C.S.*

1. Describe the chief distinguishing peculiarities of the breeds of sheep.
2. To what cutaneous diseases are sheep specially subject?
3. Mention the method of feeding which you would adopt to favour the production of butter in cows kept for the dairy.
4. What are the principles which should guide the farmer in the management of fattening stock?
5. How would you ascertain the value of a sample of milk?

19th September, 1855, 2 *o'clock, p.m.*

SURVEYING AND MAPPING.—*Examiner, J. England, A.M.*

1. Describe the method of making a survey with the chain.
2. Calculate the quantity due to the offsets in the annexed field-book:—

20	670	
0	550	0
	500	35
	350	25
0	220	0
	150	10
	0	20

3. A chain when compared with the standard is found to be one link too short; what error would this cause in a survey made with it, and computed as 150A. 2R. 30P.?
4. State the methods usually employed for enlarging maps.
5. Describe the method of making a survey with the prismatic compass, and the checks on the accuracy of the work.
6. Describe the Vernier scale, and illustrate it by an example.
7. State the adjustments of the spirit level which have to be made at each setting-up of the instrument.
8. How may the vertical position of the staff be insured?
9. How do you check the field operations in levelling?
10. Fill up the necessary columns of a levelling field-book, and reduce the following readings, the datum being taken at 100:—

Back.	Fore.
10·56	6·40
8·72	7·35
5·42	6·54
3·21	7·48

11. The distances in links being 100, 250, 300, 450, plot the above section.
12. State the checks on the accuracy of the levelling field-book.

20th September, 1855, 9 *o'clock, a.m.*

ARITHMETIC.—*Examiner, Rev. Robert Carmichael, A.M., F.T.C.D.*

1. Calculate the income tax on £230, at 7*d.* in the £1.
2. The liabilities of a grazier being £3,467 19*s.* 6*d.*, calculate the amount of his assets, in order that he should be able to pay 7*s.* 6*d.* in the £1.
3. The price of 15 cwt. 3 qrs. 6 lbs. of beef being £33 3*s.* 9*d.*, calculate the price per cwt.
4. Find the interest on £371 10*s.* for 81 days at five per cent. per annum.
5. Calculate the number of square yards in 30 acres.
6. Multiply 32·51 by ·06, and divide 53·25 by ·05; in each case explaining the process employed, by the aid of vulgar fractions.
7. Reduce the circulating decimal '234' to a vulgar fraction, and account for the process employed.
8. Add together

$$\frac{1}{2}, \quad \frac{1}{3}, \quad \frac{1}{4}, \quad \frac{1}{5}.$$

9. The price of butcher's meat in 1813 was, in England, £4 5*s.* per cwt. while the price in 1827 was only £1 15*s.* 4½*d.* per cwt.; calculate the rate per cent. of the fall in price.

21st September, 1855, 9 *o'clock, a.m.*

CHEMISTRY.—*Examiner, John Blyth, M.D.*

1. What peculiarity in the rate of expansion does water exhibit on cooling from 46° to 32° F.? Of what importance is this anomaly in the economy of nature?
2. Describe the mode of forming thermometers; explain the three scales commonly used, and show the manner of converting the degrees of the different scales into each other.
3. State, shortly, the laws of chemical combination.
4. Explain in symbols, the formation of oxygen from a mixture of chlorate of potash and peroxide of manganese; what part does the manganese play?
5. On boiling freshly-fallen rain-water, a quantity of gas is obtained; state its composition compared with atmospheric air.
6. What is the usual process for obtaining ammonia? Give its composition and properties.
7. Describe the different varieties of carbon and their properties; explain the grounds on which peat-charcoal is used as a fertilizer.
8. Give, in symbols, the processes for preparing carbonic acid and carbonic oxide; give their composition by weight, and their chief properties.
9. Give the process for manufacturing oil of vitriol. What are its composition, specific gravity, and properties? Why is the commercial acid frequently coloured?
10. What is the composition in equivalents and volumes of the oxygen compounds of nitrogen? State the mode of preparing nitric acid.
11. Silica, in the form of sand, is quite insoluble in water; by what means may it be rendered quite soluble, what are its properties in the soluble state, and by what further means may it be reconverted into the insoluble form?
12. What is the formula of the hydrate of common phosphoric acid? Give the mode of detecting this acid in soluble and in insoluble compounds.
13. Show the reactions by which silica, in the ashes of vegetables, may be detected by means of fluoride of calcium.
14. What is the nature of a salt?
15. Show how Al_2O_3, FeO, CaO, KO, NH_4O, in solution together, can be separated from each other by general, and detected by special, re-agents.
16. What is the difference between clay and alumina? Give the mode of preparing the latter, its properties and formula, and state the reason for adopting such formula.
17. In what manner is the quantity of ammonia in a manure ascertained?
18. Whence is the source of the carbonic acid which is found in the ashes of plants?

21st September, 1855, 2 *o'clock, p.m.*

ELEMENTS OF PHYSICS.—*Examiner, G. Johnstone Stoney, A.M.*

1. If, in a system of pulleys, there be two sheaves in the movable block and two in the fixed block, prove that forces in the ratio of 4 to 1 will balance.
2. A lever, 18 inches long, has a pivot through its centre, and weights of 4 and 6 lbs. are hung from its ends, where must an additional weight of 6 lbs. be hung to produce equilibrium?
3. State the principle of work, and reconcile with it the decrease in the speed of a railway train after the steam has been cut off.
4. Explain how the earth's motion causes the change of the seasons.
5. If ¾ of a vessel be immersed when floating on water, and ½ when floating on nitric acid, what is the sp. g. of the latter?
6. A cubic foot of stone of sp. g. 1·2 is submerged in water, with what force does it press against the bottom?

N.B.—A cubic foot of water weighs 62½ lbs.

7. If an upright tube, 4 feet long, be attached to a bladder, and the whole filled with water, what pressure per square inch tends to burst the bladder?

8. Why does no dew fall under a shed?

9. What will be the length of a bar, whose co-efficient of expansion is 0·000012, if its temperature be raised 20°, its original length having been forty feet?

10. Prove that a convex lens will magnify.

11. Describe some experiments which establish a difference between positive and negative electricities.

12. What are the chemical reactions in a voltaic cell of copper and zinc excited by water acidulated with sulphuric acid?

22nd September, 1855, 9 *o'clock, a.m.*

ZOOLOGY.—*Examiner, Dr. Melville.*

1. State the physical and chemical composition of chyle, and describe its microscopic characters.

2. Describe the course of the circulation in mammals, and the mode of proof.

3. Give a sketch of the economy of life in the higher animals, and of its relations to the other kingdoms of nature; pointing out the uses of the different constituents of food, and the ultimate products of the altered tissues.

4. Give a tabular view of the sub-kingdoms and classes of the animal kingdom; state their characteristics, and give examples.

BOTANY.

1. Describe the structure, position, and uses of the cambium layer in flowering plants.

2. Define the terms:—estivation, stipule, corymb, gymnosperm, gynandria.

3. Describe the phenomena connected with the movements of the sap, and the influences which heat and light exercise on those movements.

4. Refer the plants on the table to their respective *Linnean* classes and orders.

5. Determine the names of the grasses on the table; and state the characteristics of the order *Gramineæ*.

22nd September, 1855, 2 *o'clock, p.m.*

MINERALOGY, GEOLOGY, AND PHYSICAL GEOGRAPHY.

Examiner, J. Beete Jukes, M.A., F.R.S.

1. What are the minerals entering into the composition of "granite," "syenite," "greenstone," and "basalt," respectively?

2. Mention the minerals which enter most abundantly into the composition of the ordinary igneous and aqueous rocks in the British islands.

3. If you found crystals of quartz, feldspar, and calcspar, how should you distinguish them from each other?

4. What mineral substances are most essential to the formation of a fertile soil?

5. Give brief general descriptions of the following rocks:—"granite," "greenstone," "limestone," "shale," "marl," "gravel," and "clay," stating which are igneous and which aqueous, which stratified, and which unstratified.

6. What do you understand by "drift?"

7. State the general relations between "drift" and other rocks, and show how far the agricultural value of land depends upon one or the other.

8. What is the practical use of fossils in geology?

9. Give an abstract of the general series of stratified rocks, mentioning any characteristic fossils of each great formation that occur to you.

10. Of what great class of stratified rocks does Ireland principally consist?

11. Describe generally the course of the gulf stream and its effect on the climate of the British islands and Scandinavia.

12. What is the northern limit of the growth of wheat in the different countries of the northern hemisphere, and what remarkable deviations are there from the average course of this limit? State also the height above the sea at which wheat ceases to be productive in England and Ireland.

EXAMINATION FOR THE DIPLOMA OF ENGINEERING.

18th September, 1855, 2 *o'clock, p.m.*

DRAWING AND GEOMETRY.—*Examiner, J. England, A.M.*

1. Draw a false ellipse with five centres; span, 30; rise, 8.

2. Draw a true ellipse with the same rise and span; also, a normal to its circumference at any point.

3. Draw a parabola, an abscissa, and corresponding ordinate, being 4 and 8 respectively; also, a normal at any point in the curve.

4. A right circular cylinder is cut by a plane inclined at an angle of 30° to the axis, draw the section.

5. The same cylinder being cut by another plane parallel to the former, draw the development of the portion of the surface of the cylinder between the two planes.
6. Draw the horizontal projection of a helix on a cylinder, the diameter of the cylinder being 10, and entire length of one entire turn of the helix 40.
7. Describe the method of drawing a screw.
8. Draw the horizontal and vertical projections of a spur-wheel, the axis being horizontal and perpendicular to the vertical plane.
9. Do the same when the axis is inclined to the vertical plane.
10. Place in isometrical projection a cylinder,—the height being twice the diameter of the base.

19th September, 1855, 9 *o'clock, a.m.*

ENGINEERING.—*Examiner, J. England, A.M.*

1. Give a cross section of a line of railway:
(*a.*) In cutting, 10 feet clay.
(*b.*) In embankment, 15 feet.
2. Give a cross section of a turnpike road leading to a large town, with a specification of the materials required.
3. State the general principles which you would adopt to keep such a road in repair.
4. Design a road bridge to cross a river 60 feet wide,—the banks being clay for a depth of 10 feet, resting on rock; depth of river, 6 feet.
5. Give cross sections of the rails and sleepers you would adopt for a line of railway, and specifications for them.
6. Give an estimate for one cubic yard of brickwork, at the following prices:—

Bricklayers, 4*s.* per day.
Labourers, 1*s.* per day.
Bricks, 25*s.* per thousand.
Lime, 2*s.* per barrel.
Sand, 6*d.* per barrel.

7. Give a plan and section of the lock chamber, and gates of a canal.
8. Draw up a bill of quantities for the above.
9. Design a lattice girder bridge to carry a railway over a turnpike road, in an embankment of 25 feet.
10. Design a timber bridge for the same case.

19th September, 1855, 2 *o'clock, p.m.*

SURVEYING AND MAPPING.—*Examiner, J. England, A.M.*

1. Four stakes, B, C, D, and E, being driven in the ground at intervals of 100 feet apart, a level being placed—

Between	B and C,	reads B	= 6·46
,,	,,	,, C	= 4·32
,,	C and D,	,, C	= 7·54
,,	,,	,, D	= 5·42
,,	D and E,	,, D	= 7·22
,,	,,	,, E	= 4·43

Rule the columns of a field-book, enter the above observations, and reduce the levels,—the datum line being 100 feet below B.
2. The above being part of a section for a railway,—base 30, slopes 1½ to 1, commencing 10 feet under stake B, with an ascent of 1 in 200,—calculate the quantity of earth in the cutting.
3. What quantity of land would be required for this cutting?
4. State the advantages of placing the level midway between the staves.
5. Describe the method of levelling with the theodolite.
6. Describe the transit instrument and its adjustments.
7. How would you proceed to range out the centre line of a tunnel?
8. How transfer the levels from the surface of the ground to the formation level of a tunnel?
9. Describe the method of making a survey for a line of railway.
10. How would you proceed to make the survey of a town?
11. How do you determine the position of a point by means of angular observations taken at it to surrounding points, whose position is known?
12. State the defects of magnetic instruments as applied to surveying.

20th September, 1855, 9 *o'clock, a.m.*

MATHEMATICS.—*Examiner, Rev. Robert Carmichael, A.M., F.T.C.D.*

1. Multiply 31·72 by ·003, and divide 7·06 by ·02; in each case explaining the process employed by the aid of vulgar fractions.

2. A specimen of lead ore, weighing 4,000 grains, after cupellation yielded 3·7 grains of silver; calculate the number of ounces, Troy, of silver to the ton.

3. If £22 19*s.* pay the wages of 9 men for 18 days, calculate the amount required to pay 23 men for 5 days.

4. Extract the square root of 18·6624.

5. Two sides of a triangular field are respectively 123·2 and 76 yards, and the angle between is 49°; calculate the area of the field, the sine of 49° being ·75471.

6. The sides of a triangular field are respectively 53, 49, and 98 yards; calculate its area.

7. Calculate the logarithm of 54673243, the logarithm of 54673 being 4·7377729, and the logarithm of 54674 being 4·7377809; and explain the principle of the rule.

8. Calculate the value of sec. 30° to three places of decimals.

9. Find the value of x from the equation

$$\frac{3x+1}{4}+\frac{7x+2}{3}=5x+2.$$

10. Calculate the values of x and y from the system of equations

$$\left.\begin{aligned}2x+y&=16\\3x-y&=19\end{aligned}\right\}$$

20th September, 1855, 2 *o'clock, p.m.*

MATHEMATICS.—*Examiner, Rev. Robert Carmichael, A.M., F.T.C.D.*

1. If 11 men build a wall of a given length and $7\frac{1}{2}$ feet high in 17 days, calculate the number of days which 20 men will require to build a wall of the same length and 10 feet high.

2. Solve the equation—

$$\sqrt{a+x}+\sqrt{a-x}=\frac{12a}{5\sqrt{a+x}}.$$

3. *a.* In a given circle inscribe a regular pentagon.
   b. Point out the importance of this problem in connexion with trigonometry, and deduce by its indirect aid the numerical value of sin. 18° to three places of decimals.

4. *a.* If any similar figures be similarly described on the sides of a right angled triangle, prove that the figure described on the hypotenuse is equal to the sum of the figures described on the sides.
   b. Hence construct a circle whose area shall be equal to the sum of the areas of two given circles.

5. Prove that—

$$\sin^2\theta-\cos^2\theta=\sin^4\theta-\cos^4\theta.$$

6. Investigate the general expression for the area of a spherical triangle.

7. Investigate the general condition that two conics—

$$\begin{aligned}Ax^2+Bxy+Cy^2+Dx+Ey+F&=0\\ax^2+bxy+cy^2+dx+ey+f&=0\end{aligned}$$

may be similar and similarly placed.

8. A tangent being drawn to an ellipse, and a perpendicular dropped from the centre, express the perpendicular in terms of the angles made by it with the axes.

21st September, 1855, 9 *o'clock, a.m.*

CHEMISTRY.—*Examiner, John Blyth, M.D.*

1. How is the specific gravity of a solid lighter than water ascertained? Illustrate by an example.

2. Water is exposed under the same circumstances to heat in vessels of gold, copper, tin, iron, silver; state the order in which the point of ebullition is attained in each vessel.

3. Explain in symbols the formation of oxygen from a mixture of chlorate of potash and peroxide of manganese. What part does the manganese play?

4. Give the different modes of preparing H; explain the reactions which take place in each case.

5. Explain the arrangement for producing an intense light by the combustion of H O gas; explain the principle of the safety jet for preventing explosions.

6. State, in volumes, the composition of the atmosphere, the specific gravity of its two chief gases, and the law in virtue of which an intimate mixture of the two is formed.

7. Under what circumstances do N and O unite directly?

8. How are C O_2 and C O prepared? Give their properties.

9. What are the modifications of silicic acid, and how may they be converted into each other.

10. What is meant by the terms "permanent" and "temporary" hardness in waters? Explain Clark's method for rendering waters soft.

11. What is the function of sand in ordinary mortars? What chemical changes take place in the latter on solidification by long exposure to the air?

12. What is the essential difference between a hydraulic and an ordinary limestone?

13. What is the composition of gypsum before and after burning? To what temperature ought it to be exposed to form "plaster of Paris," and what is the effect of exceeding this point?

14. In what respect does steel differ from cast and malleable iron? Give the process for converting iron into steel.

15. Arrange the following metals—platinum, gold, silver, iron, lead, zinc, copper, tin, in the order—1st, of their malleability; 2nd, of their ductility; and state the manner of ascertaining their tenacity.

16. Give shortly the process for extracting zinc from calamine: state its chemical properties, and its relation to heat at different temperatures.

17. What is meant by allotropic forms of bodies? Give examples and show how they are produced.

18. What is meant by the neutrality of an oxysalt? State the rule for such neutrality.

21st September, 1855, 2 *o'clock, p.m.*

NATURAL PHILOSOPHY.—*Examiner, G. Johnstone Stoney, A.M.*

1. How may an inequality in the arms of the beam of a pair of scales be detected and its magnitude determined, and in what way can you weigh accurately with such scales?

2. Show that the path of a projectile in a vacuum would be a parabola.

3. What attraction towards the sun would be needed to retain the earth in a circular orbit of 95,000,000 miles radius, with a uniform velocity of nineteen miles per second?

4. If half of a vessel be immersed when floating on sulphuric acid of sp. g. 1·8, and $\frac{2}{3}$ when floating on weak nitric acid, determine the sp. g. of the latter.

5 *a*. What puts a limit to the exhaustion which can be effected by the air pump?

b. Why is the labour of attaining a given vacuum much less with the double-barrelled air-pump than with the common single-barrelled instrument?

6 *a*. Explain how the same materials which form warm clothing will serve to keep ice cool.

b. What arrangements of a thermometer make it a sensitive instrument, and what make it highly impressible?

7 *a*. Show that a convex lens will magnify.

b. Point out why a micrometer cannot be adapted to a Galilean telescope.

8. Describe some experiments which establish a difference between positive and negative electricities.

9. Point out why a voltaic battery of small cells should be preferred to a single large cell for telegraphic purposes.

21st September, 1855, 2 *o'clock, p.m.*

PRACTICAL MECHANICS.—*Examiner, G. Johnstone Stoney, A.M.*

1. Explain how wheels under a carriage reduce the work to be done in overcoming friction.

2. Prove that (neglecting the resistance of the air) the work done in moving a carriage up a rough incline = the work done in raising it through the height of the incline + the work done in moving it along a horizontal road, of equal roughness, through a distance equal to the base of the incline.

3. Which of the advantages which the steam pile-driving engine has over the common ram may be referred to the difference between stationary and rubbing friction?

4. *a*. State the principle of work, and illustrate it from the motion of railway trains.

b. Point out the source of the power which overcomes the resistances during the time that the speed is decreasing, after the steam has been cut off.

5. Enumerate the chief sources of useless work in water-mills.

6. Find the power accumulated in a wheel weighing a ton, and making five rotations per minute, if its radius of gyration be four feet.

7. Explain why a fly-wheel tends to equalize the motion of machinery.

8. Prove that the area of the figure traced by Watt's indicator, multiplied by the number of strokes made by the engine per minute, is proportional to the horse-power of the engine.

9 *a*. Define the expressions, *duty*, *horse-power*, and *efficiency* (or *modulus*), applied to engines.

b. To what precautions in the construction and management of Cornish engines is the amount of their duty attributable?

22nd September, 1855, 2 *o'clock, p.m.*

MINERALOGY, GEOLOGY, AND PHYSICAL GEOGRAPHY.

Examiner, J. Beete Jukes, M.A., F.R.S.

1. What are the minerals entering into the composition of "granite," "syenite," "greenstone," and "basalt," respectively.

2. Describe the external characters and general chemical composition of the principal minerals in the felspar family, such as orthoclase, albite, oligoclase, labradorite, &c., &c.

3. What is "kaoline?"

4. Describe the rocks "sandstone," "conglomerate," "clay," "slate," and "limestone," mentioning any peculiar varieties of each.

5. Describe the principal characters of stratified and unstratified rocks, and their method of formation?

6. What do you mean by the terms "dip," "strike," "lamination," "cleavage," "joint," "fault," "vein?"

7. Mention any circumstances that occur to you in the composition or structure of rocks that are likely to impair their durability as building stones.

8. What is the practical use of fossils in geology?

9. Give an abstract of the series of stratified rocks, with such of the characteristic fossils of each great formation as occur to you.

10. Being asked to give an opinion as to the chance of obtaining coal by sinking through a dark grey shale containing the following fossils:—Strophomena (leptæna) depressa; Strophomena (leptæna) euglypha; orthis biloba; Rhynconella (terebratula) Wilsoni; Calymene Blumenbachii; Halysites (catenipora) catenulatus, or any one of them, what would be your answer?

11. If instead of the above fossils the shale contained fragments of Belemnites or Gryphæa incurva, or pieces of Ammonites, what opinion should you give?

12. Describe generally the "monsoons," and the wet and dry seasons of India, and their proximate causes.

EXAMINATION FOR HONORS IN ENGINEERING.

26th September, 1855, 9 *o'clock, a.m.*

THEORETICAL AND PRACTICAL MECHANICS.—*Examiner, G. Johnstone Stoney, A.M.*

1. Investigate the strains to which a fixed axis of rotation is subjected during the motion.

2. Show that it is essential to the equilibrium of gases that the temperature should be constant throughout each *couche de niveau.*

3. A particle is projected into a medium resisting as the square of the velocity: find its position and velocity in terms of the time.

4. A uniform plank leans against a wall, given the length of the plank and the coefficients of friction between it and the wall and ground; investigate the limiting position of equilibrium.

5. Prove that the force is central if the area swept out by the radius vector be proportional to the time.

6. Prove that the normal force soliciting a free particle $= \frac{v^2}{\rho}$, where ρ is the radius of curvature of its path.

7. Investigate the reduction of pressure which may exist at a contraction in a tube transmitting a fluid.

8. If two rods of the same material be similar, what is the ratio of their powers to resist a twisting force?

9. Show that if friction, &c., could be neglected, an infinite velocity would give the maximum effect in a reaction turbine.

10. Whence arise the terms containing the first and second powers of the velocity in the expression of the efficiency of a locomotive engine.

11. A wheel, whose weight is a ton, and radius of gyration four feet, is started with a velocity of five rotations per minute, and makes 100 rotations before stopping, what is the coefficient of friction if its pivots be three inches in diameter?

12. Suppose that the pulley of an Atwood's machine is a uniform disk, and that you know its weight, radius, and coefficient of friction, and the weights which are hung over it, investigate the motion, neglecting the rigidity of the cord, &c.

26th September, 1855, 2 *o'clock, p.m.*

NATURAL PHILOSOPHY.—*Examiner, G. Johnstone Stoney, A.M.*

1 *a*. If a cubic inch of iron be thrown into a vessel containing mercury and water, how much will be immersed in the mercury?

b. What weight of iron must be attached to 4 lbs. of cork to make it lose its buoyancy in water?

N.B.—Sp. g. iron = 8. Sp. g. mercury = $13\frac{1}{2}$. Sp. g. cork = $\frac{1}{4}$.

2 *a*. Explain why applying resin to a violin bow increases its efficiency.

b. Why is the musical tone of a bell alone heard at a distance, while near at hand the clang of the hammer may exceed it?

3. From what experiments and observations is it known that gravity is a molecular property of matter?

4. Explain the construction and action of a Nicol's prism.

5. Give an account on the wave theory of the colours of thin plates of a double refracting crystal in the polariscope.

6 *a*. In charging a conductor with electricity by induction, the result is the same whatever part be put in communication with the ground. Explain this.

b. How may positive and negative electricities be distinguished by the gold leaf electroscope?

7. If a cylindrical bottle, a foot high, and with a very narrow mouth, be partially filled with water, and then gently inverted, a little of the water will flow out and the rest will be retained by the pressure of the air; if the bottle be then observed to be half full of water, determine the quantity which flowed out.

8. By what experiments may the latent heats of water and of steam be determined?

9. Show that the magnifying power of a telescope given by Ramsden's dynameter $+\frac{F}{\lambda}$ will be the magnifying power of the instrument to a person whose distance of distinct vision is λ, F being the focal length of the telescope.

10. Prove that a combination of thin lenses in contact, which is achromatic for any one distance, is so for all distances.

11. A pond, of equal depth throughout, appears to a spectator shallower at a distance than near at hand. Explain this.

12. Show that the field of view of a telescope or compound microscope will be a maximum when the pupil of the eye is placed at the image of the object-glass formed by the eye-piece.

27th September, 1855, 9 *o'clock, a.m.*

CHEMISTRY.—*Examiner, John Blyth, M.D.*

1. State why water usually begins to freeze at the surface; explain under what conditions this process may be reversed, so as to dam up streams, and cause their overflow.

2. Explain the theory of the artificial production of nitre.

3. What is the composition of gunpowder? Why cannot nitrate of soda, or chlorate of potash, be substituted for nitrate of potash, in its manufacture?

4. A piece of polished iron is exposed to moist air, beside another piece of the same kind on which is a small spot of rust: give an explanation of the different effects produced.

5. Describe the process for galvanizing iron; explain the principle on which its action depends.

6. State the law of isomorphism; give examples, in symbols, of isomorphous salts.

7. Give the reasons for the products which are obtained on evaporating the following solutions:—1st, a mixture of protosulphate of iron, and of sulphate of copper; 2nd, the same mixed solution into which a current of chlorine has been passed, previously to evaporation.

8. Explain the American and German metallurgic processes for silver.

9. In what manner would an alloy, containing silver, copper, tin, and iron, be analyzed qualitatively and quantitatively?

10. Give the preparation, composition, and properties of corrosive sublimate. How is it applied in the process of "Kyanizing," and to what property may its antiseptic virtues be ascribed?

11. Mention the composition of the most important fulminating powders: state the mode of preparing the compound used in making percussion caps.

12. Chlorate of potash and sulphuric acid were found in the fuses of the Russian "infernal machines;" explain their action.

27th September, 1855, 2 *o'clock, p.m.*

SURVEYING AND MAPPING.—*Examiner, J. England, A.M.*

1. Describe the method of measuring the base line of a trigonometrical survey, and of reducing the measured base to the sea level.

2. When in a trigonometrical survey the three angles of one of the triangles exceed 180°, how would you calculate this triangle?

3. Describe the method of making the survey of a tidal river.

4. How would you lay out railway curves with the chain and theodolite? Calculate the angle which a chord of $\frac{1}{2}$ chain subtends in a circle where radius is 20 chains?

5. How would you lay out half widths on the side of a hill?

6. Describe the method of determining the "hydraulic mean depth" and "mean velocity" of a river.

28th September, 1855, 9 *o'clock, a.m.*

CIVIL ENGINEERING.—*Examiner, J. England, A.M.*

1. State the precautions you would adopt to prevent slipping of a railway embankment formed on the side of a hill.

2. Give a design for a tubular girder bridge, 60 feet span.

3. Also for a lattice girder bridge of the same span.

4. Give an estimate and specification for either of the above cases.

5. Give a design for an iron roof for a railway passenger shed, 60 feet span.

6. Give a specification for the materials employed in the preceding.

7. Required the discharge over a weir 20 feet in length, and depth of water 6 inches.

8. Required the diameter of a pipe capable of discharging 100 gallons per minute, with a fall of 2 feet per mile.

28th September, 1855, 2 *o'clock, p.m.*

MINERALOGY, GEOLOGY, AND PHYSICAL GEOGRAPHY.

Examiner, J. Beete Jukes, M.A., F.R.S.

1. Describe in general terms the external characters and chemical composition of the following minerals:—Quartz, common feldspar, mica, hornblende, augite, olivine.
2. Define "quaquaversal dip," "anticlinal and synclinal line," "contortion," "inversion," and "denudation."
3. What are "gneiss," "mica chist," and "primary limestone?" and how did they become what they are?
4. Give the chemical composition of "serpentine;" state its use, and mention the principal localities where it occurs in the British Islands.
5. What is a mineral vein?
6. There is a general rule as to the inclination of faults, and the intersection of mineral veins, by which the direction of the "shift" or "throw" can be calculated on; state this rule, and explain it by means of diagrams.
7. What form will the angular blocks of columnar basalt assume on weathering, and what is the origin of that form?
8. What are the subdivisions of the carboniferous system of Ireland, as given by Dr. Griffith, in his geological map?
9. Explain the geological structure on which the possibility of artesian wells depends.
10. In travelling by railway from Cheshire or from Devonshire to London, we meet with few or no tunnels till we pass Birmingham on the one line and Bristol on the other; but there are several large tunnels both between Birmingham and London and Bristol and London: describe the great features in the geology and physical geography of that part of England which rendered these circumstances inevitable.
11. We pass by railway from Dublin, across Ireland, to Galway, to Limerick, and to Cork, without tunnels, and without any deep cuttings: describe so much of the geology and physical geography of Ireland as shall explain the possibility of thus crossing from sea to sea in Ireland, while it would be almost impossible thus to cross any part of England.

29th September, 1855, 2 *o'clock, p.m.*

DRAWING AND DESCRIPTIVE GEOMETRY.—*Examiner, J. England, A.M.*

1. Draw the horizontal and vertical projections of the heading and coursing spirals of an oblique arch, the arch being semicircular on the square, angle of skew 45°, span on the square 30 feet.
2. Draw the joints on the face of this arch.
3. Determine the angle which one of these joints makes with the corresponding joint on the soffit.
4. How (geometrically) would you reduce an angle to the horizon?
5. Draw the curve of intersection of a right circular cylinder and sphere.
6. Also of a right cone and cylinder.
7. Give an isometrical drawing of a bridge for a railway in a 20 feet cutting.

1st October, 1855, 9 *o'clock, a.m.*

MATHEMATICS.—*Examiner, Rev. Robert Carmichael, A.M., F.T.C.D.*

1. Investigate the cube root of 80·621568.
2. Convert into a decimal shape—

$$3+\cfrac{1}{7+\cfrac{1}{15}},$$

point out the significance of the result, and demonstrate the truth of the interpretation.
3. Investigate the numerical value of the Napierian base, namely, $e=2{\cdot}7182818$.
4. Plan a folding ruler by which any angle may be instantly trisected, mechanically.
5. Construct geometrically a circle whose area shall be equal to the sum of the areas of three given circles.
6. If a triangle be inscribed in a given circle so that one side may pass through a given point, prove that the remaining sides intercept on the polar of the point segments which, measured from the middle of the polar, contain a constant rectangle.
7. Among all triangular pyramids of given base and altitude, find that which has the least surface.
8. Investigate the general functional equation of a surface of revolution described round an axis passing through the origin, and making with the axes of co-ordinates angles l, m, n.
9. Explain the principle of conversion of mixed circulating decimals into vulgar fractions, and apply it to the decimal ·23′167′.

1st October, 1855, 2 *o'clock, p.m.*

MATHEMATICS.—*Examiner, Rev. Robert Carmichael, A.M., F.T.C.D.*

1. If a body revolve in an ellipse under the action of a force directed to the centre, investigate by Newton's method the law of force.

2. Investigate the characteristic property of the periodic time of revolution in this case.
3. Explain the construction of a horizontal sun dial, and investigate the formula which determines the extreme hour line.
4. Given the sun's azimuth at setting, and his altitude at six o'clock, find the latitude of place and declination of sun.
5. Investigate the general expression for the solid contents of a sphere.
6. Integrate—

$$\frac{dx}{a^2+x^2}.$$

7. Express Newton's "law of cooling," namely, that the quantity of heat lost by a body, in a given time is proportional to the excess of heat in the body over that in the surrounding medium, by a differential equation, and integrate this equation.
8. Write down the general equation of a spheroid, and investigate the expression for its solid contents.

EXAMINATION FOR DIPLOMA IN ELEMENTARY LAW.

26th September, 1855, 9 *o'clock, a.m.*

LAW OF PROPERTY AND PRINCIPLES OF CONVEYANCING.—*Examiner, Professor Barry.*

1. What comes under the legal definition of "land?"
2. Explain the maxim, that all lands belonging to any subject are held of the Crown, either mediately or immediately.
3. Define an estate, in fee simple, and explain the exact meaning of the expression, "*seized in his demesne*," as of fee.
4. Land is given, by deed, to *A* and his *Assigns* for ever. What estate does *A* take?
5. Explain the effect of the statute "*De Donis Conditionalibus*" upon estates limited to a man and the heirs of his body, and what was the occasion of this statute?
6. Land is given, by deed, to *A* and *his heirs male*, who dies, leaving a daughter only; what is the effect of such a limitation? and what would be the construction of the same words, if contained in a will?
7. Define an estate *at will*, and state why it is that tenancies, from *year to year*, have been, in modern times, more usual than tenancies at will.
8. If *A* be tenant from year to year to *B*, will the tenancy be determined by the death of either *A* or *B*?
9. Give some account of the statute of "uses," the reasons which led to its enactment, and the consequences to which it gave rise. How is this statute usually cited or described in conveyances and in pleadings?
10. What solemnities were prescribed by the statute of frauds to render valid a devise of real estate? How have they been altered by the new statute of wills? To what wills, in point of date, does the latter statute apply?
11. What are the two species of conveyances by matter of record?
12. What is an easement?
13. What are the three different species of rent at common law? and how may rents be created?
14. Can incorporeal hereditaments pass by feoffment? Do they lie in grant or in livery?

26th September, 1855, 9 *o'clock, a.m.*

JURISPRUDENCE.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. Define *municipal law, common law, equity.*
2. What is, according to Lord Bacon, the relation between public and private law?
3. State the views of Bentham and Reddie respecting the distinction between civil and criminal law.
4. Explain the following phrases, and state your opinion as to the propriety of the distinctions they denote—*justitia attributrix* and *expletrix*, *perfect* and *imperfect rights*, *rights of things* and *rights of persons*, *things real* and *things personal.*
5. Explain clearly the nature of the change effected in the laws of France by the Code Napoleon, and the objections to its introduction into Germany.
6. Explain the method and uses of analytical jurisprudence.
7. Explain the method and uses of historical jurisprudence.
8. What is your opinion as to the antiquity of the common law of England?
9. When and why was the Court of Common Pleas established?
10. To what period do you assign the establishment of the modern form of trial by jury, and what was the province of the jury in more ancient times?
11. Explain the nature of the changes made by recent statutes in the law of evidence, and the principle on which the previous state of the law was founded.
12. How is the difference between the Roman and the English law of inheritance to be accounted for?

26th September, 1855, 2 *o'clock, p.m.*

EQUITY.—*Examiner, Professor Barry.*

1. Of what two distinct tribunals does the Court of Chancery consist? and at what period did its jurisdiction as a court of equity begin to be established?
2. What estate in the property mortgaged has a mortgagor in equity? and what is the proceeding or suit in Chancery called which the mortgagee must take to extinguish such equitable estate?
3. What is an equitable mortgage, and how may it be created?
4. What classes of subjects are exclusively dealt with by equity? and over what have law and equity a concurrent jurisdiction?
5. What is the distinction between the relief afforded in a court of equity upon the breach of a contract relating to land, from that given in a court of law?
6. How may a cause in equity be instituted? and what kind of pleading may be its commencement in the Court of Chancery in this country?
7. When are the proceedings in equity commenced by *information?* and in whose name?
8. What is a demurrer in equity? and what are the other forms or modes of defence in equity?
9. What is the object and effect of a suit "*ne exeat regno?*" For what kind of debt may it be instituted?
10. Upon what principle is the jurisdiction of a court of equity in suits for the administration of assets founded?
11. What is an injunction in equity? Mention some of the purposes for which it is usually obtained.

26th September, 1855, 2 *o'clock, p.m.*

COMMON LAW AND CRIMINAL LAW.—*Examiner, Professor Barry.*

1. Into what two kinds may the municipal laws of England and Ireland be divided?
2. To what date does the phrase "*a time whereof the memory of man runneth not to the contrary,*" refer?
3. Give some examples of general customs. What requisites are essential to the validity of a particular custom?
4. Into what kinds may statutes be divided? Explain the difference between a declaratory, a penal, and a remedial statute; also between what are known as enlarging, and enabling, and restraining, and disabling acts.
5. To what extent is the common law obligatory in a country discovered and colonized by British subjects?
6. What is a simple contract? Under what circumstances is it essential that a simple contract should be in writing? What matters are essential in simple contracts, the insertion of which is dispensed with in specialties?
7. Define a crime, and distinguish between a civil injury and a crime. How does the law deal with each respectively?
8. What is the meaning of the term "*felony?*" Define *a misdemeanor.*
9. At what age may an infant be guilty of felony? and between what ages is his capacity for crime taken into consideration?
10. What is the distinction between a principal in the *first* and in *the second* degree? and what is to be understood by the presence requisite at the commission of the crime to render a man a principal of the latter kind?
11. Define an accessory. Why can there be no accessories in *treason* or in *misdemeanors?*
12. In order to constitute the crime of murder, within what time from the cause of death must the death actually take place?
13. Of what causes has the Crown side of the Queen's Bench cognizance? and what are the different methods of trial in this court?
14. How many of the grand jury must agree before a bill of indictment can be found?
15. How many jurors may a prisoner on his trial for *treason* or *felony* challenge *peremptorily?*

26th September, 1855, 2 *o'clock, p.m.*

CIVIL LAW.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. Define the phrase *jus civile* in its strictest sense, and also as opposed to *jus gentium.*
2. The *long divorce of law and equity* was at length reconciled, and instead of the *twelve tables* the *perpetual edict* was fixed on as the invariable standard of civil jurisprudence (*Gibbon*). Explain the words in italics, with dates.
3. Describe the contents of the code, pandects, institutes, and novels, respectively.
4. Explain the classification of law under the heads of persons, things, and actions; and state your opinion of the propriety of this classification.
5. Explain the law of *accessio,* and give an example.
6. Give an example of a *quasi contract.*
7. Give an example of a *quasi delict.*

8. Define a *codicil*, and state the origin of this mode of disposition.
9. Mention some of the principal events in the history of the Roman law, in the eastern empire, and in western Europe, after the time of Justinian.
10. How was the Roman law first introduced into England?
11. When was it excluded from the courts of common law?
12. Does the fact referred to in the last question account for any peculiarities in the English legal system?

EXAMINATION FOR HONORS IN ELEMENTARY LAW.

27th September, 1855, 9 *o'clock, a.m.*

LAW OF PROPERTY AND PRINCIPLES OF CONVEYANCING.—*Examiner, Professor Barry.*

1. Define an estate in reversion. What are said to be the usual *incidents* to reversions? When is the reversioner said to be seized *of the reversion as of fee, and when seized of the land in his demesne of fee?*
2. Describe the doctrine of "*remitter.*"
3. Why cannot a remainder be limited after the grant of an estate in fee simple?
4. At what time must a contingent remainder vest in reference to the particular estate?
5. What gave occasion to the introduction in settlements of trustees to preserve contingent remainders? What was the nature of this invention, and by whom was it originated?
6. Are any peculiar words, whether of licence or agreement, essential to the form of a lease? By what rule are words in a lease construed, if the words be ambiguous?
7. What is the rule touching the admission of parol evidence to vary or explain the words of a deed?
8. Enumerate the usual covenants in a common lease, and distinguish such as are considered as "covenants running with the land." By what statute is an assignee of the reversion or of the lease enabled to sue on such covenants respectively? Refer to the case in which it has been held that the object of a power of appointment, contained in a devise of and affecting the reversion, is an assignee in law, within the meaning of the act.
9. Describe a power simply collateral, appendant, and in gross. What regulates the relative priority of an estate or interest derived under a power conferred by a deed prior in date to the instrument exercising it?
10. A and B hold an estate in fee as joint tenants. B dies, having by will devised his share to C. What estate or interest does C take under B's will?
11. Before the enactment of the 7 Wm. IV., and 1 Vict., c. 26, how did a will operate upon personal estate acquired subsequently to its execution? Did it operate in the same manner upon after-acquired realty? Is there any and what distinction in the effect of wills in this respect executed since the passing of the act?

27th September, 1855, 9 *o'clock, a.m.*

JURISPRUDENCE.—*Examiner, T. E. Cliffe Leslie, LL.B.*

I.—ANALYTICAL JURISPRUDENCE.

1. *a.* What is the line of demarcation between public and private law?
   b. Do questions relative to the mode of trial by jury belong to public or private jurisprudence, or to both?
2. State briefly what appear to you to be the principal arguments for and against the policy of the English law respecting the unanimity of juries.
3. What are the chief deficiencies in the jurisdiction of the Courts of Common Law?
4. Formerly suitors could, by certain forms of pleading, resort to whichever of the superior courts of law they preferred. Did any advantages follow, on the principles of Bentham, from this power of selection?
5. Can you suggest, from the writings of Bentham, any improvements in the judicial establishments of this country?
6. State briefly what you know of the nature and effects of the modern codes of France, Austria, and Prussia.

II.—HISTORICAL JURISPRUDENCE.

1 *a.* To what juridical period do you refer the establishment of the English County Courts?
   b. What causes led to the decline, and recent revival of the importance of their jurisdiction?
2. Mention the principal improvements in judicial organization, from the Norman Conquest until the reign of Edward I., fixing, as accurately as you can, the period of each.
3. Mention the principal legal writers and treatises during the time specified in the preceding question.
4. State the principal changes which the law has undergone with respect to the alienation of entailed estates, from the time of Henry III. to that of William IV.
5. Trace, as accurately as you can, the history of the right of devising lands.
6. "It was justly observed by one of the judges, in the reign of Henry VI., that if actions

on the case had been allowed by courts of law as often as occasion required, the writ of subpœna would have been unnecessary; or, in other words, the whole of the present jurisdiction of the Court of Chancery would have been part of the ordinary jurisdiction of Courts of Law. But, unfortunately, the spirit of the Statute of Westminster the Second was not carried out by the judges."—*Address of Sir R. Bethell to the Juridical Society, 12th March, 1855.*

a. What enactment is referred to in the last sentence of this passage?

b. What was the writ of subpœna, and when invented?

c. Explain the observation, that if actions on the case had been allowed as often as required, the Courts of Law would have possessed the jurisdiction which became peculiar to the Court of Chancery.

27th September, 1855, 2 *o'clock, p.m.*

EQUITY.—*Examiner, Professor Barry.*

1. Point out the fallacy of the notion that Equity is intended to abate the rigour of the Common Law, and explain why it should rather be regarded as ancillary to it.
2. State the cases in which Equity gives a married woman a provision out of her choses in action in derogation of the legal right of her husband, or his assignee.
3. If the assets are insufficient to pay the whole of the debts of the testator, what power has the executor to prefer one creditor to another?
4. What is meant by the abatement of legacies? and in what order do they abate?
5. What is meant by marshalling assets?
6. How is a suit in Equity instituted on behalf of an infant?
7. Give an instance illustrative of the doctrine that Equity considers what ought to have been done as having been actually done.
8. In favour of what parties will Equity remedy the defective execution of powers?
9. What distinctions are to be taken into consideration when relief is sought upon the ground of mistake?
10. Upon what principle is the doctrine of *satisfaction* founded?
11. What is a bill of discovery? Mention the cases in which a defendant or respondent may refuse discovery.
12. In what cases is a bill of revivor, or a supplemental bill, necessary? What form of pleading has been given by the Court of Chancery Regulation Bill (Ireland) in lieu of a bill of revivor?

27th September, 1855, 2 *o'clock, p.m.*

COMMON LAW AND CRIMINAL LAW.—*Examiner, Professor Barry.*

1. What was monopoly at Common Law? and what is the longest period for which any patent right can be granted?
2. In what cases may a married woman sue at law without her husband? and in what cases must the husband and wife be co-plaintiffs?
3. State the resolutions in Crogate's case (8 *Co.*, 66), as to replications "*de injuriâ.*" In what cases can it be replied?
4. A sells to B a debt due to A. Can B enforce payment of the debt, and how? Explain the effect of the debtor's agreeing to the transfer of his liability, and distinguish it from mere notice of the sale to the debtor.
5. When there is a verdict for a plaintiff, what is requisite to entitle him to costs as incident to the verdict? In what cases must the certificate of the judge be obtained to entitle a plaintiff to costs?
6. Enumerate the existing writs of execution at Common Law, and explain the differences between them. What is the distinction between an extent in chief and an extent in aid?
7. What statute principally regulates the law of high treason? What are misprisions, and into what two sorts does the law divide them?
8. What is the substance of the provisions contained in 11th and 12th Vict., c. 12, for the better security of the Crown and Government?
9. Explain the different kinds of homicide, and their degrees of guilt.
10. During what *time* must the act be done to constitute the crime of *burglary?* and what ambiguity has been removed by the 7 Wm. IV., and 1 Vict., c. 86, s. 4?
11. Give the effect of 14th and 15th Vict., c. 100, s. 8, in reference to the allegation of the *intent* of the defendant in indictments for forgery.
12. When may a judgment be reversed by a writ of error? and what distinction in reference to this writ exists between a judgment for felony and one for a misdemeanor?

27th September, 1855, 2 *o'clock, p.m.*

CIVIL LAW.—*Examiner, T. E. Cliffe Leslie, LL.B.*

1. In what doctrines of the law of England do you find the most remarkable resemblances to the civil law?
2. In what points do you find the most remarkable differences between the two systems?
3. What are, in your opinion, the chief merits of the Roman law?
4. What do you consider its chief defects?

5. "The Rhine," said Napoleon I., "is mine, and the land through which it flows: Holland is formed wholly by the deposit of the Rhine, as the Delta of Egypt is by that of the Nile; therefore Holland belongs to me" (*Colquhoun's Civil Law*). State the principles of the civil law applicable to this claim, assuming the facts to be as stated in the foregoing passage.

6. Explain the contract of mandate, and mention any principles of mercantile and international law which have been derived from the Roman doctrines relative to this contract.

7. Explain the origin and nature of *fidei commissa*.

8. What is the contract of *bottomry*, and how termed in Roman law?

9. What were the functions of the *judices selecti?*

10. The Roman law affords a model of preventive justice, from which very important branches of the jurisdiction of the Court of Chancery appear to have been drawn?

11. The interval from the twelve tables to the time of Justinian is divisible into three distinct juridical periods?

12. Mention the names of the principal Roman jurists during the second of those periods, and in the time of Justinian.

Appendix III.

DEGREES AND DIPLOMAS.

1. *For the Degree of Doctor in Medicine.*

William Aickin, Belfast.
John Martin Coates, Belfast.
James Cuming, Belfast.
John M'Neale Donnelly, Cork.
Richard Eaton, Galway.
Robert Ferguson, Cork.
Christopher Joynt, Galway.
Edmund Lawrance Monson Larken, Cork.
Owen O'Hare, Belfast.

2. *For the Degree of LL.B.*

David Ross, A.M., Belfast.

3. *For the Degree of Master in Arts.*

David Graham Barkley, Belfast
William Bole, Belfast.
John Duggan, Cork.
Robert Johnson, Belfast.

4. *For the Degree of Bachelor in Arts.*

Robert James Arnold, Belfast.
Henry Donovan, Cork.
James Gibson, Belfast.
Charles J. Hooper, Galway.
James Lalor, Galway.
Charles Lane, Cork.
James Stuart Land, Cork.
John Ferguson M'Callan, Belfast.
William M'Cormac, Belfast.
James M'Cully, Belfast.
Joseph Allan Millar, Belfast.
John Moorhead, Galway and Belfast.
Richard O'Leary, Cork.
Edmund J. Palmer, Cork.
Francis Petticrew, Belfast.
George M'Cullagh Reed, Belfast.
William John Taggart, Belfast.
Raymond West, Galway.
James Young, Belfast.

5. *For the Diploma of Elementary Law.*

Robert Johnson, A.M., Belfast.
Alexander Deaves Kennedy, Cork.
William Mason, Galway.
James Dunne Parker, A.B., Belfast.

6. *For the Degree of Engineering.*

Michael O'Kinealy, Galway.

7. *For the Diploma in Agriculture.*

Charles O'Hara, Galway.

8. *For Certificate of having passed first Medical Examination.*

James Matthews, Belfast.
Edward M'Sheehy, Cork.
William Roche Rice, Cork.

DISTRIBUTION OF HONORS.

In the Faculty of Arts.

A.M.—Honors.

1. *Classics.*

Honor—An Exhibition of £15, and a Gold Medal, . William Bole, A.M.

2. *English Philology and Criticism, Logic, Metaphysics, or Political Economy and Jurisprudence.*

Honor—An Exhibition of £15, and a Gold Medal, . Robert Johnson, A.M.

3. *Mathematical and Physical Sciences.*
Honor—An Exhibition of £15, and a Gold Medal, . John Duggan, A.M.

4. *Experimental and Natural Sciences.*
Honor—An Exhibition of £15, and a Gold Medal, . David Graham Barkley, A.M.

A.B.—Honors.

1. *Ancient Classical Languages and Literature.*
1st Honor—An Exhibition, value £15, and a Gold Medal, Raymond West, A.B.
2nd Honor—An Exhibition, value £10, . . . Richard O'Leary, A.B.

2. *English Language and Literature.*
Honor—An Exhibition, value £10, and a Gold Medal, . James Gibson, A.B.

3. *Modern Foreign Languages.*
1st Honor—An Exhibition, value £15, and a Gold Medal, Francis Petticrew, A.B.
2nd Honor—An Exhibition, value £10, . . . Robert J. Arnold, A.B.

4. *Mathematics.*
1st Honor—An Exhibition, value £15, and a Gold Medal, E. J. Palmer, A.B.
2nd Honor—An Exhibition, value £10, . . . Joseph Allan Miller, A.B.

5. *Natural Philosophy.*
Mathematical Physics Honor—An Exhibition, value £15, and a Gold Medal, ... E. J. Palmer, A.B.
Experimental Physics Honor—An Exhibition, value £10, and a Gold Medal, ... Raymond West, A.B.

6. *Chemistry, and Chemical Physics.*
Honor—An Exhibition, value £15, ... John Moorhead, A.B.

7. *Natural Sciences.*
Honor—An Exhibition, value £15, and a Gold Medal, . John Moorhead, A.B.

8. *Logics and Metaphysics.*
Honor—An Exhibition, value £15, and a Gold Medal, . John Ferguson M'Callan, A.B.

9. *Jurisprudence and Political Economy.*
Honor—An Exhibition, value £15, and a Gold Medal, . Charles J. Hooper, A.B.

10. *Engineering.*
Honor—An Exhibition, value £10, and a Gold Medal, . Michael O'Kinealy.

In the Faculty of Medicine.

1st Examination in Medicine: an Exhibition, value £10, . Wm. Roche Rice.

In the Faculty of Law.

1. *Elementary Law.*
Honor—An Exhibition of £10, and a Gold Medal, . Alexander D. Kennedy.

By the power conferred on the Chancellor and Senate to admit Graduates of other Universities to similar and equal Degrees in the Queen's University, the Degree of Doctor in Medicine was on this occasion granted to the two following gentlemen:—

Robert Crothers, M.D., C.M., Surgeon to the Royal Tyrone Artillery.
Charles Croker King, M.D., F.R.C.S.I., M.R.I.A., Professor in the Queen's University.

Appendix IV.

Ordinance regulating the Conditions, Forms, and Subjects of the Degree, Diploma, and Honor Examinations for the Year 1856.

General Regulations.

The General Examination will commence on Tuesday, the 16th September, 1856, and will be carried on in the order prescribed in the annexed Tables.

This Examination will be principally by printed papers, with such *viva voce* interrogation as the Examiner may deem necessary. The Honor Examination is to be solely by printed papers.

Candidates will be required to answer for Degrees and Diplomas in all the subjects prescribed by the Ordinances for their respective courses, save where an option is given herein.

The Honor Examination will be similarly conducted (except where specially provided for), the questions being of a higher character.

The following Fees to the University are to be paid by the respective Candidates to the Secretary, before the Examination; they are not returnable in case of rejection, but are not required again for re-examination:—

Degrees.		Diplomas.	
LL.D.,	£3	Engineering,	£3
M.D.,	5	Elementary Law,	2
A.M.,	3	Agriculture,	2
LL.B.,	1		
A.B.,	1		

The Names of Candidates obtaining Degrees or Diplomas will be published in alphabetical order; those of Candidates obtaining Honors in the order of merit.

The Examiners having passed Candidates for Degrees or Diplomas, shall select from them those whom they consider deserving of being examined for Honors, and shall return their names to the Secretary, with the result of the General Examination. None others shall be entitled to compete for Honors, save for those in the Celtic, Sanscrit, or Arabic Languages, for which any Candidate who has passed for a Degree may present himself as a competitor, these subjects not requiring a preliminary examination.*

Students passed for the Degree of A.B., may be examined for Honors in more than one department.

The Examiners are to recommend for Honors solely on the ground of absolute merit. If, consequently, Honors shall be withheld in any one branch of study, the Senate may, on the recommendation of the Examiners, apply the amount to increase those in any other department.

Candidates must furnish to the Secretary, through their respective Registrars, on or before the 1st of September, the several Certificates required by the Ordinances; for this purpose they will be supplied by the Registrars with proper Forms and Schedules.

All Degrees and Honors are conferred at the Public Meeting of the University.

Faculty of Arts.

Examination for the Degree of Bachelor of Arts, and for Honors in that Faculty.

Every Candidate will be required to answer for the Degree of A.B. in the subjects included in the Group A. of the following Table, and also to answer in the subjects of one of the three groups of subjects marked B. C. D. respectively; the Candidate being allowed to select.

1. Group A.—Required from all Candidates.

a { The Latin Language and Literature.
{ The Greek Language and Literature.
b A Modern Foreign Language.
c Mathematics.

2. *e* Special Groups in one of which the Candidates must answer.

Group B.

English Philology and Criticism.
Logic.
Metaphysics, or (in place of Metaphysics, at the election of the Candidate) Political Economy and Jurisprudence.

Group C.

Chemistry.
d Natural Philosophy.

Group D.

Zoology.
Botany.
Physical Geography.

a.—In the *Latin and Greek Languages* every Candidate will be allowed to select for his examination in each language some two works of the following Classical Authors:—

Virgil—First six Books Æneid.
Horace—Satires, Epistles, and Art of Poetry.
Sallust.
Terence—Adelphi and Phormio.
Cicero—Orations against Cataline.
Tacitus—Agricola and de Moribus Germanorum.
Xenophon—Anabasis, Book, 2, 3.
Homer—Iliad, four first Books.
Herodotus—Book I.
Æschylus—Prometheus Vinctus.
Euripides—Medea.
Lucian—Walker's Selections.

* Candidates for Honors in the Celtic, Sanscrit, or Arabic Languages, are requested to give their Names to the Secretary as soon as possible after the Degree Examination.

b.—In Modern Languages the Candidate will be allowed to select for his examination the French, the German, or the Italian language, and will be required to translate from some two Modern Authors, in the language selected, and to translate an exercise from English into the same language.

c.—In Mathematics the Candidate will be examined in—

The 1st, 2nd, 3rd, 4th, and 5th Books of Euclid, and in the Definitions of the 5th Book.
Arithmetic, including Vulgar and Decimal Fractions.
Algebra, including the usual rules, to the end of Quadratic Equations, with the Nature and Use of Logarithms.
Plane Trigonometry.

d.—In the Examination in Natural Philosophy the Candidate will be expected to be able to give such mathematical proofs in reference to any question proposed as may be supplied by the foregoing mathematical course.

e.—In the examinations upon the subjects of the groups selected by the Candidates, the object of the Examiner will be to ascertain the extent and accuracy of the general knowledge of each subject possessed by the Candidate.

The special Courses and regulations of the Honor branches are as follows :—

1. Ancient Classical Languages and Literature.

1st Honor: an Exhibition, value £15, and a Gold Medal.
2nd Honor: an Exhibition, value £10.

The Candidates for Classical Honors will be examined in the following course:

Horace—Odes, Satires, and Epistles.
Virgil—Æneid, Books 1 to 8.
Cicero—Tusculan Disputations.
De Oratore.
Actiones Verrinæ.
Juvenal—Satires, 1, 3, 8, 13, 14.
Tacitus—Annals, Book 1.
Histories, Book 1.
Livy—Books 4 and 22.
Terence—Adelphi and Phormio.
Plato—Apologia and Crito.
Thucydides—Book I.
Herodotus—Book I.
Æschylus—Prometheus Vinctus.
Sophocles—Œdipus Coloneus.
Homer—Iliad, 20 to 24.
Odyssey, 12 to 18.
Euripides—Medea, Alcestis, and Orestes.
Greek and Latin Composition in Prose and Verse.

2. English Language and Literature.

Honor: an Exhibition, value £10, and a Gold Medal.

The Candidates will be examined in the History, Philology, and Grammar of the English language, at various periods, and in the principles of Literary and Grammatical Criticism, as exemplified in application to various Authors in English Literature.

3. Modern Foreign Languages.

1st Honor: an Exhibition, value £15, and a Gold Medal.
2nd Honor: an Exhibition, value £10.

Candidates will be examined in the History, Philology, and Grammar of the following Modern Languages, viz.:—The French or German, or the French and German, or the French, German, and Italian, as the Candidate may think proper. He will be required also to translate from English into the language or languages selected by him for examination.

4. Mathematics.

1st Honor: an Exhibition, value £15, and a Gold Medal.
2nd Honor: an Exhibition, value £10.

The Candidates will be examined in the following Course:

Euclid—Books 1, 2, 3, 4, 5, 6.
Algebra, including its Application to Questions of Probabilities and Annuities.
The Theory and Solution of the Higher Equations.
Plane Trigonometry, including Demoivre's Theorem and its Applications, and the Construction and use of Trigonometrical Tables.
Conic Sections.
Differential and Integral Calculus.
Differential Equations.
Co-ordinate Geometry, of Two and of Three Dimensions.
The First three Sections of the First Book of the Principia.
Spherical Trigonometry and its Application to Astronomy.
Theory of Logarithms.—Construction and Use of Logarithmic Tables.

5.—Natural Philosophy.

Honor: an Exhibition, value £15, and a Gold Medal.

Subjects of Examination—

Mechanics;
Optics, Geometrical and Physical;
Astronomy, Plane and Physical;

mathematically treated; and for another Honor, an Exhibition, £10 and a Gold Medal:—subject of Examination—

Experimental Physics.
Heat.
Electricity.

6.—Chemistry and Chemical Physics.

Honor: an Exhibition, value £15, and a Gold Medal.

The subjects of Examination will be—

Chemical Philosophy.
Voltaic Electricity.
Crystallography.
Inorganic and Organic Chemistry.

7.—Natural Sciences.

Honor: an Exhibition, value £15, and a Gold Medal.

The subjects of Examination will be—

The Principles of Animal Structure and Classification.
The Principles of Vegetable Structure and Classification.
The Elements of Geology and Physical Geography.
The Laws of Geographical Distribution of Plants and Animals.

8.—Logics and Metaphysics.

Honor: an Exhibition, value £15, and a Gold Medal.

The Examination will be conducted in accordance with the Courses of Instruction in Logics and Metaphysics given in the Queen's Colleges.

9.—Jurisprudence and Political Economy.

Honor: an Exhibition, value £15, and a Gold Medal.

The Examination will be conducted in accordance with the Courses of Instruction in Jurisprudence and in Political Economy given in the Queen's Colleges.

10.—Celtic Languages.

Honor: an Exhibition, value £10, and a Gold Medal.

The Examination will include the Critical History and Philology of the Hiberno-Celtic language, with translations of passages from Authors of different periods, and re-translations from English.

11.—Sanscrit.

Honor: an Exhibition, value £10, and a Gold Medal.

12.—Arabic.

Honor: an Exhibition, value £10, and a Gold Medal.

Regulations for the Examination of Candidates for the Degree of A.M.

A Candidate may proceed to obtain his Master's Degree by examination in any one of the four following Courses of Study, viz.:—

1.—*Classics*, which shall be considered as including—
The Greek and Latin Classic Authors; Prose Composition in Greek, Latin, and English; a modern Foreign Language.

2.—English Philology and Criticism.
Logic.
Metaphysics, or (in place of Metaphysics, at the Election of the Candidate) Political Economy and Jurisprudence.

3.—*Mathematical and Physical Science,* which shall be considered as including the following subjects:—

Algebra, including the theory of Equations.
Analytical Geometry.
Trigonometry, Plane and Spherical.
The Differential and Integral Calculus.
Differential Equations.
Theory of Probabilities.
Statics and Dynamics.
Hydrostatics.
Hydraulics and Pneumatics.
Heat.
Electricity and Magnetism.
Optics.
Plane Astronomy.
Physical Astronomy.

4.—*Experimental and Natural Sciences,* which shall be considered as including the following subjects:—

Experimental Physics.
Laws of Chemical constitution and combination.
General properties and preparation of Organic and Inorganic bodies.
Structure, Functions, and Classification of Animals.
Structure, Functions, and Classification of Vegetables.
Zoological and Botanical Geography.
Elements of Geology and Palæontology.
Elements of Physical Geography.
Elements of Crystallography and Mineralogy.

An Exhibition of £15, with a Gold Medal, will be conferred by the Senate upon any Candidate who shall obtain the first place in any one of the above four Courses of Study, if he be recommended as possessed of sufficient absolute merit.

Regulations for the Examination of Candidates for the Diploma of Civil Engineer or of Agriculturist.

1.—Engineering Diploma.

1. The Mathematical Examination of Engineering Candidates will include—

Arithmetic, including Vulgar and Decimal Fractions.
Algebra, to the end of Quadratic Equations.
Euclid, 1st, 2nd, 3rd, 4th, 5th, and 6th Books.
Mensuration.
Plane Trigonometry.
Elements of Spherical Trigonometry.
Construction and use of Logarithmic and Trigonometrical Tables.
Conic Sections.
Descriptive Geometry.

2. The Examination in Natural Philosophy, Chemistry, Mineralogy, and Geology, will be conducted with special reference to Engineering objects. In Natural Philosophy the Candidate will be required to supply in his answers all such mathematical proofs as may be supplied by the Mathematical Course above specified.

Every Engineering Candidate will be required to produce one of his own drawings of each of the following kind, viz.:—Bridges and Roads, accompanied by Plans and Sections; also Topographical Maps, with the Field-books and observations from which the whole were constructed. Candidates are recommended to produce Architectural drawings and drawings of Machinery. These drawings must be certified by the Teacher of Drawing in the College as having been *bona fide* executed by the Candidate.

Candidates will be furnished with data for a project of Constructive Engineering or Architecture, and will be required to furnish detailed propositions for carrying same into effect, with estimates and specifications.

Every Engineering Candidate must provide a certificate of having been engaged in obtaining a practical knowledge of Engineering under the direction of a Practising Engineer, for the term required by the Ordinance under which he proceeds for his Diploma.

2.—Agricultural Diploma.

The Examination will include—

Arithmetic, with Vulgar and Decimal Fractions.
Mensuration, practically treated.
Principles of Natural Philosophy (without Mathematical proof).

And all the other subjects of the Course for Agricultural Diploma specified in the Ordinance, considered specially in their applications to Agriculture and Land Improvement.

The Candidate is recommended to produce any Surveys or Maps, with the Field-books from which they were constructed, which he may have prepared during his term of instruction in Surveying.

The Candidate will be furnished with data for a project of Farm Improvement, and required to furnish a detailed proposition for carrying the same into effect, with estimates and specifications.

The Candidate will be required to exhibit and explain a plan previously arranged by him for keeping Farm Accounts.

HONOR EXAMINATION IN THE DEPARTMENT OF ENGINEERING AND AGRICULTURE.

Engineering—Honor: an Exhibition, value £10, and a Gold Medal.

The Examination in Mathematics will include the following additional Course:

The Higher Algebra.
Differential and Integral Calculus, Differential Equations.
Co-ordinate Geometry of two and of three dimensions.
Spherical Trigonometry, and its applications to Astronomy and Geodesy.
The first three Sections of the First Book of the Principia.

In the examination in Natural Philosophy and in the theory and construction of Machines, the subjects will be mathematically treated.

Agriculture—Honor: an Exhibition, value £10, and a Gold Medal.

FACULTY OF LAW.

FOR THE DEGREE OF LL.D.

Candidates will be examined in the Laws of the Admiralty and Ecclesiastical Courts of England and Ireland, in addition to the subjects of Examination for the Degree of LL.B.

FOR THE DEGREE OF LL.B.

Candidates will be examined in the Law of Property, and Principles of Conveyancing, Jurisprudence, Equity, Common and Criminal Law, Civil Law, Pleading, Practice, and Evidence, Constitutional, Colonial, and International Law.

LL.B. HONOR EXAMINATION.

Honor: an Exhibition, value £10, and a Gold Medal.

FOR DIPLOMA IN ELEMENTARY LAW.

Law of Property, and Principles of Conveyancing, Jurisprudence, Equity, Common and Criminal Law, Civil Law.

HONOR EXAMINATION IN ELEMENTARY LAW.

Honor: an Exhibition, value £10, and a Gold Medal.

FACULTY OF MEDICINE.

REGULATIONS FOR THE EXAMINATION OF CANDIDATES FOR DEGREES AND HONORS.

Candidates will be required to answer in all the subjects of the Course prescribed for the degree of M.D., by the Ordinance of 30th June, 1850; or for the first or second Examination under the Ordinance of the 15th of March, 1852. These latter will be concurrent with the Examinations under the original Ordinance, and will be conducted in the same way.

HONOR EXAMINATION IN THE FACULTY OF MEDICINE.

1st Honor: an Exhibition, value £20, and a Gold Medal, - - - -	For Candidates electing to proceed under the Ordinance of June, 1850.
2nd Honor: an Exhibition, value £20.	
Honor: an Exhibition, value £10, and a Gold Medal, - - - -	For Candidates in the second examination under the Ordinance of 15th March, 1852.
Honor: an Exhibition, value £10, - -	For Candidates in the first examination under the said Ordinance.

By Order,

ROBERT BALL, LL.D., *Secretary.*

The Queen's University, 7th January, 1856.

CARLISLE.

I, GEORGE WILLIAM FREDERICK, EARL OF CARLISLE, Lord Lieutenant-General and General Governor of Ireland, do hereby approve of the foregoing Ordinance.

By His Excellency's Command,

THOS. A. LARCOM.

Order of the Degree and Diploma Examination in the following Studies in the Queen's University in Ireland, 1856.

		ARTS, A.B. Degree.	AGRICULTURE.	MEDICINE.	ENGINEERING.
Tuesday, 16th September,	10 o'clock,	Latin,	Theory of Agriculture, Farm Finance, and Accounts,	Medicine.	
	2 o'clock,	Greek,	Practice of Agriculture, Farm Improvements,	Surgery,	Drawing and Geometry.
Wednesday, 17th September,	10 o'clock,	Modern Languages,	History and Diseases of Farm Animals,	Modern Languages,	Engineering, and Architecture and Finance.
	2 o'clock,	English Literature,	Surveying and Mapping,	Materia Medica, Pharmacy, and Medical Jurisprudence,	Surveying and Mapping.
Thursday, 18th September,	10 o'clock,	Mathematics,	Arithmetic,	Anatomy,	Mathematics.
	2 o'clock,	Logic, Metaphysics,	—	Physiology and Comparative Anatomy,	Mathematics.
Friday, 19th September,	10 o'clock,	Chemistry,	Chemistry,	Chemistry,	Chemistry.
	2 o'clock,	Natural Philosophy,	Elements of Physics,	Natural Philosophy,	Natural Philosophy, Practical Mechanics.
Saturday, 20th September,	10 o'clock,	Zoology and Botany,	Principles of Zoology and Botany,	Botany (Zoology Junior Class).	
	2 o'clock,	Physical Geography,	Mineralogy and Geology, Physical Geography,	Midwifery and Diseases of Women and Children,	Mineralogy, Geology, and Physical Geography.
Monday, 22nd September,	10 o'clock,	Jurisprudence and Political Economy,			
	2 o'clock,	For any *viva voce* Examination Examiners may wish to give in addition to above.			
Tuesday, 23rd September,	10 o'clock,	Examiners to meet to make up their Report, and to recommend for Examination for Honors.			
	4 o'clock,	Students to assemble to hear result of Examiners' Report.			

Order of the A.M., Law, and Honor Examinations in the Queen's University in Ireland, for the year 1856.

		A.B. Honors.		A.M. Degree and Honors.			Honors.			Faculty of Law.		
							Engineering.	Agriculture.	Medicine.	Diploma of Elementary Law.	The Degree of LL.B.	The Degree of LL.D.
Wednesday, 24th September,	10 o'clock.	I. Classical Languages. Greek.	V. Natural Philosophy.	1. Greek.	III. Natural Philosophy.		Natural Philosophy.	Elements of Physics.	Natural Philosophy.	Law of Property, and Principles of Conveyancing. Jurisprudence.	Law of Property, and Principles of Conveyancing. Jurisprudence.	Law of Property, and Principles of Conveyancing. Jurisprudence.

Wednesday, 1st October,	10 o'clock.	Examiners to meet and make up their Report on their Honor Examination.										
	4 o'clock.	Students to meet to learn the result of Examiners' Report.										

The Public Meeting 7th of October.

N.B.—In the event of a Candidate for Honors in the A.B. Course being recommended in two subjects here set down for the same hour, an alteration of the above may be necessary.

V.—Returns of Students attending the following Medical Schools and Hospitals have been received during the year ended June, 1856.

Medical Schools of—	Hospitals.	Lying-in Hospitals.
Trinity College.	Jervis-street.	Rotundo.
Queen's College, Belfast.	City of Dublin.	Coombe.
Queen's College, Cork.	House of Industry.	Cork.
Queen's College, Galway.	S. and N. Infirmary, Cork.	Belfast.
Royal College of Surgeons.	Meath.	
Carmichael School.	Belfast.	
Original, Peter-street.	Mercer's.	
Dublin, Peter-street.	Galway Infirmary and Fever Hospital.	
Jervis-street.	Steevens'.	
	Westminster.	

Students who purport to present themselves for examination for Medical Degrees in the Queen's University, should ascertain that their names are returned for any Medical Lectures they may attend, lest in consequence of such returns not having been supplied, their qualifications should be deemed insufficient when they so present themselves; and lecturers who are willing to make the required returns, and who have not received the necessary forms through the Registrars of the respective institutions, should cause application to be made for them.

VI.—An Estimate of the Sum that will probably be required to defray the Expenses of the Queen's University in Ireland, for the year ending 31st March, 1857.

Two Thousand Four Hundred and Fifteen Pounds.

Salaries of Examiners.	£	s.	d.
1. In Greek,	100	0	0

Appendix VIII.

Examiners, elected 16th July, 1856.

Greek.—William Nesbitt, Professor, Q.C., Galway.
Latin.—Bunnell Lewis, A.M., Professor, Q.C., Cork.
English Literature.—G. L. Craik, A.M., Professor, Q.C., Belfast.
Logic and Metaphysics.—T. W. Moffett, LL.D., Professor, Q.C., Galway.
Mathematics.—George Boole, LL.D., Professor, Q.C., Cork.
Natural Philosophy.—George Johnstone Stoney, A.M., Professor, Q.C., Galway.
Chemistry.—John Blyth, M.D., Professor, Q.C., Cork.
Anatomy and Physiology.—Joseph H. Corbett, M.D., Q.U., L.R.C.S.I., Professor, Q.C., Cork.
Zoology and Botany.—Alex. G. Melville, M D., M.R.I.A., Professor, Q.C., Galway
Modern Languages.—R. De Vericour, D. es L, Professor, Q.C., Cork.
Mineralogy, Geology, and Physical Geography.—Joseph Beete Jukes, A.M., F.R.S., Director Geological Survey.
Jurisprudence and Political Economy.—T. E. Cliffe Leslie, Professor, Q.C., Belfast.
Law.—William B. Drury, Esq., Barrister-at-Law.
Civil Engineering and Surveying.—Alexander Jack, Esq., Professor, Q.C., Cork.
Agriculture.—John F. Hodges, M.D., Professor, Q.C., Belfast.
Celtic Languages.—John O'Donovan, LL.D., M.R.I.A., Professor, Q.C., Belfast.
Medicine.—Samuel Gordon, M D., &c.
Surgery.—Christopher Fleming, M D., M R C.S.I., M.R.I.A., &c.
Materia Medica, Pharmacy, and Medical Jurisprudence.—William Barker, M.D., &c.
Midwifery and Diseases of Women and Children.—Richard Doherty, M.D., Professor, Q.C., Galway.

Appendix IX.

Meetings of the Senate for the period of this Report in the Office of the University, Dublin Castle.

13th September, 1855.

Present: The Right Honourable Lord Chancellor Brady, *Vice-Chancellor.*
The President of the Queen's College, Belfast.
The President of the Queen's College, Cork.
The President of the Queen's College, Galway.
Lieut.-Colonel Larcom, LL.D.
James Gibson, A.M.

Robert Ball, LL.D., *Secretary.*

5th October, 1855.

Present: The Right Honourable Lord Chancellor Brady, *Vice-Chancellor.*
His Grace the Archbishop of Dublin.
The President of the Queen's College, Belfast.
The President of the Queen's College, Cork.
The President of the Queen s College, Galway.
Lieut -Colonel Larcom, LL.D.
James Gibson, A.M.

Robert Ball, LL.D., *Secretary.*

11*th October*, 1855—*Public Meeting in St. Patrick's Hall.*

Present: The Right Honourable Lord Chancellor Brady, *Vice-Chancellor.*
His Grace the Archbishop of Dublin.
Sir Philip Crampton, Bart.
The President of the Queen's College, Belfast.
The President of the Queen's College, Cork.
The President of the Queen's College, Galway.
Lieut.-Colonel Larcom, LL.D.
James Gibson, A.M.

Robert Ball, LL.D., *Secretary.*

27*th December*, 1855.

Present: The Right Honourable Lord Chancellor Brady, *Vice-Chancellor.*
The President of the Queen's College, Belfast.
The President of the Queen's College, Cork.
The President of the Queen's College, Galway.
Lieut.-Colonel Larcom, LL.D.
Robert Andrews, LL.D.

Robert Ball, LL.D., *Secretary.*

Stated Meeting—7th January, 1856.

Present: The Right Honourable Lord Chancellor Brady, *Vice-Chancellor.*
Sir Philip Crampton, Bart.
The President of the Queen's College, Belfast.
The President of the Queen's College, Cork.
The President of the Queen's College, Galway.
Dominic J. Corrigan, M.D.
James Gibson, A.M.

Robert Ball, LL.D., *Secretary.*

1st May, 1856.

Present: The Right Honourable Lord Chancellor Brady, *Vice-Chancellor.*
The Right Honourable Francis Blackburne.
Sir Philip Crampton, Bart.
The President of the Queen's College, Cork.
Dominic J. Corrigan, M.D.
Lieut.-Colonel Larcom, LL.D.
James Gibson, A.M.
Robert Andrews, LL.D.

Robert Ball, LL.D., *Secretary.*

Stated Meeting—20th June, 1856.

Present: The Right Honourable Lord Chancellor Brady, *Vice-Chancellor.*
The Right Honourable Francis Blackburne.
Sir Philip Crampton, Bart.
The President of the Queen's College, Belfast.
The President of the Queen's College, Cork.
The President of the Queen's College, Galway.
Dominic J. Corrigan, M.D.
Richard Griffith, LL.D.

Robert Ball, LL.D., *Secretary.*

14th July, 1856.

Present: The Right Honourable Lord Chancellor Brady, *Vice-Chancellor.*
The Right Honourable Francis Blackburne.
The President of the Queen's College, Belfast.
The President of the Queen's College, Cork.
The President of the Queen's College, Galway.
Richard Griffith, LL.D.
Dominic J. Corrigan, M.D.
Lieut.-Colonel Larcom, LL.D.
James Gibson, A.M.
Robert Andrews, LL.D.

Robert Ball, LL.D., *Secretary.*

The following Bye-law was amended at the stated meeting of the Senate of the Queen's University, on the 20th of June, 1856, by the insertion of the words in italics.

By Order,

Robert Ball.

Candidates for Degrees being presented to the Senate by the Presidents of their Colleges, and the Secretary having certified that their fees have been paid, and that they have duly passed the Examiners, they shall sign the Roll of the University, when the Chancellor (or Vice-Chancellor, *or Chairman appointed as directed by the Charter,*) shall admit them to Degrees in the following manner:—

In virtue of my authority as Chancellor, or Vice-Chancellor, *or Chairman,* I admit you to the Degree of .

The Chancellor, or Vice-Chancellor, *or Chairman,* shall then proceed to present publicly any Exhibition or Medal which may have been awarded.

Carlisle.

Dublin Castle, 25th June, 1856.

Dublin: Printed by Alexander Thom & Sons, 87, Abbey-street,
For Her Majesty's Stationery Office.

OF

RETURN of the Number of TREES Registered with the Clerks of the Peace for the different Counties in *Ireland* during the last Ten Years, distinguishing the Numbers Registered in each Year.

(Mr. Henry Hughes.)

Ordered, by The House of Commons, *to be Printed,*
18 *March* 1857.

641

ARTERIAL DRAINAGE (IRELAND).

RETURN to an Order of the Honourable The House of Commons, dated 21 March 1857;—*for*,

LISTS "of ARTERIAL DRAINAGE DISTRICTS in *Ireland* in which FINAL AWARDS have been made:"

"Of ARTERIAL DRAINAGE DISTRICTS commenced, but in which FINAL AWARDS have not yet been made:"

"RETURN of NAVIGATIONS combined with DRAINAGE:"

"LISTS of ARTERIAL DRAINAGE DISTRICTS for which FINAL NOTICES were issued, but in which the Works have not yet been commenced:"

"And, of ARTERIAL DRAINAGE DISTRICTS for which MEMORIALS were presented to the Board of Works in *Ireland*, and in which the Preliminary Surveys were commenced, but not completed."

Office of Public Works, Custom-House, Dublin, 30 May 1857.

By Order,
E. HORNSBY, Secretary.

(*Viscount Duncan.*)

Ordered, by The House of Commons, *to be Printed*,
21 *March* 1857.

Commenced, but in which FINAL AWARDS have not yet been made.

Note.—The Districts marked thus (*) constitute Return No. 3.

Probable Additional Amount to be Expended to Date of making Final Award.	Probable Date when District will be ready for Award.	Amount of Moneys Repaid by Counties, or other Parties, up to Date of this Return.	Further Sums for which Presentments by Counties have been made, to be Paid by Instalments.	Whether the Works are now being carried out to the full Extent proposed in the Report published before demanding the Final (or in Cases under "Summary Proceedings" the Second) Assent of the Proprietors.	If not, a brief Statement of the Principal Alterations or Omissions from the Plan then Proposed, which have been or are intended to be made.	Probable Amount which would be necessary to Complete the Omitted or Curtailed Works as originally intended.	Probable Area of the Lands Excluded from the Benefit of Drainage by the Alteration or Curtailment of the Works.
£. s. d.		£. s. d.	£. s. d.			£. s. d.	A. R. P.
5,000 - -	End of 1857	- - -	- - -	- - -	-- The lowest or Moystown Division, on which some portions of the contemplated works had been commenced, was, on the recommendation of the Commissioners of Inquiry, altogether abandoned, as being unnecessary for the general drainage scheme. The Belmount Division has been similarly abandoned; and also the upper portion of the Frankford River.	5,987 - -	1,484 0 0
					The upper portion of the Silver River, above Ballyduff bridge, as proposed in the Supplemental Report, has not yet been commenced, the propriety of carrying out the works being very questionable. If not completed, the figure under this head would be - - - - -	2,500 - -	1,215 0 0
					Considerable deviations have also been made, on the recommendation of the Commissioners of Inquiry, but no reliable statement could now be given of the saving in cost thus effected.		
500 - -	1857	- - -	826 9 7	They are not -	- - The alterations consist of the omission of that portion of the District between Craughwell bridge and the sea, and the restriction of the scale of the works generally to the extent proposed in the First Report, in accordance with the recommendation of the Commissioners of Inquiry. A small portion along the Raford River also omitted, because the increased value of the land would not be commensurate with the cost of the work.	15,000 - -	1,350 0 0
2,200 - -	1857	1,015 1 8	734 7 8	They are not -	- - Alterations:—Enlargement of channel for 10 miles in length beyond the size first proposed; removal of, instead of lowering Kilcreevanty and Liskeevy mills; making an embankment and drain from Milltown to Millbrook, instead of sinking the channel, and removing Milltown mill.	39,409 18 11	12,262) 0
					Omissions:—A mile and a half of channel advanced towards completion abandoned; Milltown mill not removed; Millbrook mill not lowered; abandonment of sinking 32 miles of Rivers Clare, Dalgin and Dunmore; 90 miles of tributaries, and 103 miles of minor drains, not executed; several mills on these rivers and tributaries not lowered or removed.		
8,500 - -	1858	130 17 8	302 4 -	They are not -	-- The whole of the Carheeny Division and portions of the Carheeny and Gaurus Divisions omitted by recommendation of the Commissioners of Inquiry.	8,397 6 9	1,441 3 30

(continued)

£. s. d.		£. s. d.	£. s. d.			£. s. d.	A. R. P.
14,800 – –	1862	399 3 7	362 1 1	They are not –	– – A portion of the District from Newcastle bridge to Lough Ree, and the additional works proposed at Newcastle, omitted by recommendation of the Commissioners of Inquiry. Works between the mills of Clynan and Abbeyshrule omitted, as the cost would be excessive compared with the extent of land to be benefited. In consequence of the remote prospect of completing the works of the district within a reasonable time, owing to scarcity of labour, and, therefore, greatly increased cost, it is in contemplation to recommend to the Treasury the cutting off a large portion of the upper end of the district.	2,463 16 8	1,496 0 0
700 – –	1857	239 2 8	– – –	They are not –	– – The Fallon Division, which is excavated for more than two miles to a depth of four to five feet, and was intended to be eight to nine feet, has been omitted; several drains from the head of the Keenagh Division proposed to be excavated for a length of 600 perches, omitted; the Holywell Division also omitted.	835 – –	230 0 0
2,600 – –	1857	– – –	– – –	They are not –	– – The proprietors having declined to assent to the completion of the works, as put before them in the Supplemental Report, on the recommendation of the Commissioners of Inquiry a portion of the works immediately below Kilbeggan was partially abandoned. Extensive improvements in connexion with the mills, which had been contemplated, were also decided on being omitted, but there are no sufficient data to estimate the expenditure saved thereby.	547 – –	130 0 0
1,600 – –	1857	1,102 16 9	1,322 14 3	They are not –	– – For a distance of six miles the channel in one part is directed to be left from three to six feet less in depth than was proposed, and for about two and a half miles in another part, the channel is now closed at from two feet six to three feet under the proposed depth, being only five to six feet deep; 620 perches of main drain ordered to be omitted.	2,540 – –	959 0 0
—	—	—	—	—	—	—	—
2,000 – –	1857	35 18 4	– – –	They are, with one exception.	– – The work omitted is the deepening of the Finisklin River, to the execution of which the proprietor of the adjoining land objected. The land affected is partly relieved by the deepening of the Breedoge River.	378 12 –	65 0 0
—	—	—	—	—	—	—	—
—	—	—	—	—	—	—	—
—	—	—	—	—	—	—	—
3,900 – –	End of 1857	2,279 14 3	– – –	They are not –	– – The stream of Drumlea Lough to the bridge at Dromore is directed to be omitted, having been partially opened up by the proprietors, and the consequent mill alterations are also to be omitted. The Carrickaroher stream is to be omitted.	1,295 – –	522 0 0
2,791 18 6	– –	227 15 5	– – –	They are not –	– – – – – – – –	5,440 7 10	638 0 28
43,991 18 6	– –	5,430 10 4	3,547 16 7	– – –	– – – – – – – –	84,794 2 2	21,793 0 18

In the case, nor is there any probability that anything will be done, the circumstance not being such as would warrant further outlay.

RETURN No. 3.—NAVIGATIONS combined with DRAINAGE.

3,600 – –	1857	2,268 5 1	– – –	They are not	– – The principal alteration is the excavating of the depth of the channel for navigation to 4t. 6 in. instead of six feet, the lock chambers and works connected therewith being however executed to the full dimensions; the surface level of the water for navigation, in the reaches from Skelan to Aghoo and from Ballyduff to Castlefore, has also been raised one foot, as a portion of the canal in these reaches would most probably rise in the bottom if the originally proposed water level were maintained. The proper deepening of the Derrylarey, Drumderg, Blackwater, and Foghera Rivers is not being carried out.	11,548 9 6	– –	1,806 0 0
– – –	– – Award made.	– – –	– – –	They are not	– – Entirely abandoned as to navigation.	11,000 – –	8	– Nil.
2,000 – –	1857	1,951 3 4	– – –	They are not	– – *Galway Canal.*—The general plan and dimensions proposed have been carried out; but considerable alterations have been made in details to render the navigation more efficient, viz. a single lock has been substituted for the propoeed double one at Folan's-lane, and the canal has been lined throughout with walls of masonry and coped, in lieu of rocky side slopes as proposed.	32,000 – – (For Navigation alone.) 7,084 – – (For Drainage.)	5⅜ – –	140 0 0 1,564 0 0

Newcastle Shoal.—Executed as proposed.

Friar's Cut – – – Ditto.

Meulo Shoal – – – Ditto.

Annadown Channel, Clydagh Channel, Illauneneel Channel.—It was proposed to excavate channels through these shallows 200 feet in width and 6½ feet deep; but in consequence of difficulties experienced in the execution of the works, not anticipated in the published report, the width of these channels has been reduced to that of the Friar's Cut, namely, 100 feet.

Claregalway River, Cregg River.—In progress of execution as proposed, with the exception of the channels through the bars at the mouth of these rivers, which it was proposed to open for a width of 100 feet; but which, in the Claregalway River, has been opened only 60 feet wide, and in the Cregg River 40 feet; any greater width would not be maintained by the scour of the channels.

Waterdale River.—In progress of execution as proposed.

Gortmore River.—Works executed as proposed, with the exception of the dredging of the bar at the mouth of the river, which it was proposed to make 100 feet wide, but which will be executed only 20 feet.

Oughterard Works.—The works as proposed were to excavate a navigable channel 40 feet wide, from the deep water of Lough Corrib up to the old landing quay. This arrangement was not carried out; a new pier has been built on the shores of Lough Corrib extending into the deep water near the mouth of the river, which answers all purposes of navigation, and the lands have been effectually drained by the lowering of the lake.

Failmore and Bealnabrack Rivers.—No works executed, as it was found that any channels opened through the bar at the mouth of these rivers would be filled up by the first flood.

Doughta River.—Same observations.

King's Quay (Cong).—In the execution of the navigation works between Loughs Corrib and Mask, a landing quay was formed within 100 yards of King's Quay, which rendered any works at it unnecessary.

Ballymagibbon.—It was proposed to make berths alongside present landing pier, which work is in progress.

Annakeen.—Same observation as to Ballymagibbon.

Kielkyle – – – – Ditto.

Black River.—Executed as proposed.

Knock Ferry – – Ditto.

Connexion of Lough Corrib with Lough Mask.—It was proposed in the original report to connect Lough Mask with Lough Corrib, by a channel made for the combined purpose of drainage and navigation. The work has been executed to the extent necessary to effect the drainage of the lands on the margin of Lough Mask: but the portion of the work necessary for the purpose of navigation has not been completed, and the navigation of the Loughs Corrib, Mask and Cara District now terminates at Cong on Lough Corrib.

The drainage works have been executed in accordance with the published report with the exception of those on the Kilroe, Mountross, Clydagh, Ballymagibbon, Bealnabrack, and Aughnarure tributaries, in which cases it was ascertained that the increased value of the land to be drained would not be commensurate with the cost of the works necessary to relieve them.

1,200 - -	1857	- - -	1,412 3 5	They are not	- - *River Robe, Lough Carra, Cloon Lough, and River Aille Navigations.*—It was proposed to extend the navigation from Lough Mask to Ballinrobe, in conjunction with the works necessary for the drainage of the lands on that reach of the river; also to extend the navigation from Lough Mask into Lough Carra and into Cloon Lough and the River Aille. No portion of these works has been executed with the exception of the construction of a short reach of canal, from the site of the proposed lock at Springvale, on the River Robe, to the town of Ballinrobe, and the construction of a navigable channel for a portion of the reach between Lough Mask and Lough Carra. This drainage district included the works necessary for the lowering and regulating of the level of Lough Mask, and opening up and improving its various tributaries, but has been curtailed in extent very considerably. The only works executed were those necessary for the regulation of Lough Mask, and the improvement of the River Robe from Creagh bridge to within a short distance of Crossboyne, and the opening up of the Poulnasillagh, the Lough Carra, Towerhill, and Bunnatuhber, and Turloughnasheen tributaries. The principal works omitted are as follows:—The improvement of the River Robe from Lough Mask to Creagh bridge, and from Crossboyne to Brickeens bridge, and the opening up of the Drumeady Lough, Scardaun, Clarelough, Ballindine, Eskerlavally and Castlegar tributaries: the Cloonkeely, Knocklass, Brownstown, Carrowkilleen, and Loughbeg tributaries to Loughcarra: the Cloonlough, Aille, Srah, Owinbine, Shranalong, and Toorlaggah Rivers.	8,000 - - (For Navigation.) 20,000 - - (For Drainage.)	- -	700 0 0 9,187 0 0
4,600 - -	1857	- - -	8,513 14 -	They are -	- - The alterations consist of additional works executed in the construction of wharfs or quays at "Toome," "Portglenone," and the "Cutts," and in the construction of five lockhouses not included in the original estimate or report.	- Nil - -	- Nil.	—
2,100 - -	1857	504 7 4	808 11 3	They are not	- - The works are not being carried out to the full extent proposed in the report published before demanding the final assents of the proprietors. The principal alteration of the plan is the omission of the navigation part of it, which it was then proposed to extend to Cloggy, on the main river, and to Butlersbridge on the Annalu, to Drumkeen within a mile of Cavan, on the Cavan River, and on the western line to the town of Killeshandra. As the level of the Belturbet weir has not been altered, the benefit of drainage to the extent proposed in the Supplementary Report has not been given to the lands from Belturbet to the points mentioned, as the extent of the proposed navigation. Between Cloggy and Wateraghy mill, the only work proposed in the Preliminary Report that has been done, is the excavation of the channel, and the removal of the bridge at Scarvey. The tributaries falling into the Upper Erne at Drumgore from Knockaghy, and into Lough Gowna on the southern and western side, have not been opened, with the exception of the lower part of the Rosduff River and the Corree stream. On the Cavan River, the portion between Fortview near Cavan, the diversion of the Roscolgan River, and the extension to Pollabam Lough has not been done.	37,575 16 10	26 ½	3,737 0 32
14,400 - -	- -	4,723 15 9	10,734 8 8	- - -	- - - - - -	127,208 6 4	69 ½	17,134 0 32
